EXPERIENCE

September 2021-Current (Deloitte USI)

1. **VRS (Vehicle Routing and scheduling System):**

   Developed a process where with Reservation button on case record, CSR can place the order and do the reservation for that order at the same time for distributor center with the help of dates available for delivery on that route from route planner integration.

   - Implemented LWC for order placement and displaying the allowed dates for order placement processing on UI.
   - Done integration with third party.
   - Configured flows to capture user case details and send them to a third system to get the available dates for placing orders on different available routes.
   - Involved in building development strategy, discussion regarding user stories in different sprints, go-live & post-go-live plan for the project, which helps in smooth project release.
   - Managed the entire deployment process. Deployment is done using Flosum.

2. **Online Customer Service (RUSH):**

   Made the functionality to ensure that clients outside their organization will be allowed to place training orders for their clinic that are not assigned to any specific patient, and a doctor can approve or reject the prescription based on the patient information provided to them.

   - Developed Apex classes, LWC and Community as per business needs.
   - Involved in building development strategy, discussion regarding user stories in different sprints, go-live & post-go-live plan for the project, which helped in a smooth project release.
   - Helped my junior team members with Salesforce development and testing.
   - As our QA testing team members are new to our functionality, I used to track their work and helped them by giving KT developed functionalities to ensure proper testing is done by them.

3. **Salesforce Sales & Service Order Implementation:**

   Fresenius is a global health care company dedicated to providing the most comprehensive care to people with chronic kidney disease, allowing them to improve their quality of life. The project focused on optimizing the workforce and streamlining order management processes to improve visibility into business operations, thereby improving user experience.

   - Developed Apex classes and trigger as per business needed.
   - Done the configuration and added validations to improve the order management process.

4. **Sales Express:**

   Developed a process to improve user experience while filling the signing form.

   - Developer Aura component for creating Signing Forms related to Opportunities across all regions (USA, CANADA, EMEA, JAPA).
   - Added logic for checking deduplication of Accounts related to different regions.
   - Worked on Sales related process aligning with New/NPE/EPE opportunities.
   - Created flow (screen flow) to track Expansion Effort with enhanced UI.

January 2021-July 2021 (Cloud Centric Infotech Ltd.)

- Developed scalable software solutions for cloud-based applications.
- Collaborated with cross-functional teams to enhance system performance and user experience.
- Implemented best coding practices and design patterns to improve code quality.
- Conducted code reviews and provided mentorship to junior developers.
- Worked on flow.

November 2018-January 2021 (Cloud Vandana Solutions)

- Developed customized Salesforce applications to enhance business processes and user experience.
- Implemented data models and optimized database performance for improved reporting.
- Provided ongoing support and maintenance to ensure system reliability and user satisfaction.
- Worked on customization and configuration.
