Mobile- +91- 9875652725

Career Summary:

I possess a diverse background with over 15+ years of experience encompassing various technical roles, including Technical Project Manager, Migration Expert, Application DBA, Mainframe DB2 Developer, Production Support Specialist and Data Architect along with SRE expert.

Over the years, I have acquired proficiency in a wide array of technologies and platforms such as **GCP Platform, Store procedure, SQL, Mainframe, Cobol, DB2,IMS, JCL,VSAM,MQ, CICS, Java, UNIX, Oracle, Teradata, SQL Server, Windows web services, SSIS, DataStage, Python, and JIRA**. I have recently acquired Knowledge in **GenAI and SRE framework.**

My professional journey includes over 6 years of onshore experience in countries like Netherlands, Denmark, and the USA, where I worked extensively with legacy and digital technologies such as GCP (BigQuery, Dataflow, Pub/Sub, Cloud Storage, Apache Beam, Cloud Run, Kubernetes & Spanner), DB2, SQL Server, Stored Procedures, JCL, VSAM, COBOL, CICS, MQ, Unix, SFTP, REXX, and 3rd party products like **PRM and Blue Yonder**.

Key Responsibilities and Achievements:

- Provided overarching leadership to project teams, ensuring the successful management of deliverables.
- Strong Analytical and Problem-Solving Skills, Interpersonal skills, Organizational and Multi-tasking skills.
- Developed Automation tools to simplify standard processes, save time, assist testing, and automate the monitoring process.
- Conceptual, Logical & Physical Modeling, ER Diagrams, Normalization/Denormalization, Data Lineage, Schema Optimization (DB2, BigQuery, SQL Server, Oracle, Teradata)
- Mentorship on Mainframe and trained 120 associates with 1-3 years of experience.
- Extended expertise in understanding the process, understanding operations sequences, process parameters required to achieve quality characteristics.
- Provide permanent and temporary fixes for job abends and maintain housekeeping jobs. Reduce toil, optimize code and system performance, and enhance proficiency. Address solution gaps in existing applications and ensure seamless integration with cross-functional applications.
- Recognized as a hands-on, proactive professional who can rapidly identify problems, formulate tactical plans, initiate change and implement effective programs in challenging and diverse environments.

- Responsible for tracking of trouble tickets and resolution of escalated support L2 & L3 incidents.
- Managed up to 50 associates and ensured the delivery of high-quality training.
- Analyzed application designs and architectures, collaborating with Functional Consultants to refine estimates and address performance and capacity issues.
- Orchestrated resource allocation for projects, ensuring timely access to hardware, software, and personnel.
- Monitored team progress through regular meetings, addressing milestones, accomplishments, and challenges.
- Managed customer escalations, ensuring timely resolution and maintaining customer satisfaction.
- Conducted regular status meetings with customers and stakeholders to provide updates and propose process improvements.
- Facilitated weekly project staff meetings to address progress, status, and potential roadblocks.
- Engaged with vendors to mitigate project risks and conducted follow-up calls with stakeholders.
- Validated technical manuals and escalation charts for projects, ensuring customer approval.
- Focused on customer satisfaction and provided value-added services.
- Motivated teams through timely appreciation and continuous feedback.
- Developed automation tools to streamline processes and enhance productivity.
- Recognized for proactive problem-solving and effective program execution in challenging environments.
- Participated in hackathons, demonstrating innovative ideas and understanding of Agile methodologies.
- Proficient in the Software Development Life Cycle (SDLC), with experience across different project phases.

In summary, I bring a wealth of experience, technical expertise, and leadership skills to any project or team, with a proven track record of delivering results and fostering innovation in dynamic environments. Additionally, I have received numerous accolades throughout my career, including kudos and awards from esteemed organizations such as Cognizant, Syntel, and TCS, further affirming my commitment to excellence and delivery.

Key Skills & Expertise:

Site Reliability Engineering (SRE) – Framework Design, Observability, Incident Management

Cloud & Data Migration – GCP, DB2, SQL Server, Oracle, Teradata

Mainframe Modernization – COBOL, JCL, VSAM, CICS, MQ, Stored Procedures

Automation & Performance Optimization – Python, Unix Shell Scripting, SSIS, DataStage

Project & Stakeholder Management – Agile, Scrum, Risk Mitigation, Team Leadership

Monitoring & Observability Tools – Google BigQuery, Jira, HP QC, IBM Rational Clear Case

Professional Experience:

Total work experience **: 15+ years (Oct 2009 to till date)**
Employer
: **Tata Consultancy Services, Kolkata**

Projects: 1

Organization: Tata Consultancy Services **Kolkata,India**
Client : Genworth Inc, India **July 2025-till Date**

Project Summary: -
Genworth Financial is a Fortune 500 insurance company, and the project involved maintaining, modernizing, and enhancing two mission-critical legacy applications — COLAS (Centralized Operations Life Administration System) and RTS (Real Time System) — that support life insurance policy administration and transaction processing.

Key Contributions:

- Managed end-to-end delivery for the COLAS and RTS applications, ensuring high availability and on-time deployments of monthly releases.
- Led requirement analysis sessions with business users to identify enhancements and compliance needs.
- Directed modernization efforts including code optimization and data layer refactoring to improve performance and reduce batch window.
- Provided technical leadership in debugging and resolving critical production issues in COLAS batch cycles and RTS real-time interfaces.
- Migrated legacy modules to standardized COBOL programs and integrated error handling and audit mechanisms.
- Coordinated with cross-functional teams (onshore and offshore) for seamless knowledge transfer and 24x7 production support.
- Authored technical design documents, test cases, and deployment runbooks to align with SDLC and compliance guidelines.
- Leveraged RTS for real-time policy updates and transaction monitoring, and COLAS for end-to-end policy lifecycle management.
- Utilized Control-M for scheduling and monitoring batch jobs; performed impact analysis and job stream optimization.

Projects: 2

Organization: Tata Consultancy Services **Kolkata,India**
Client : TJX Inc, India **2024- 2025**

Project Summary: -
Successfully led the **Site Reliability Engineering** (SRE) transformation for TJX's supply chain operations, enhancing system observability, automation, and resilience. Spearheaded the design and implementation of the SRE framework, including governance models, KPI/SLA/SLO definitions, and monitoring enhancements. Conducted stakeholder workshops to align goals and address reliability and performance gaps.

Key Contributions:

- Developed and implemented the SRE framework to enhance supply chain reliability, incorporating best practices, governance structures, and long-term maturity models.
- Led tools and infrastructure analysis, evaluating observability gaps across TJX's distribution and fulfillment processes and implementing monitoring improvements.
- Enhanced observability and automation for supply chain operations, focusing on Distro Flow (distribution network monitoring) and Order Fulfillment (transaction monitoring) to ensure real-time insights, anomaly detection, and automated issue resolution.
- Designed and deployed dashboards and alerting mechanisms for end-to-end supply chain visibility, improving incident response times and proactive anomaly detection.
- Optimized supply chain monitoring workflows, refining automation scripts, alert thresholds, and process benchmarks to enhance performance and minimize disruptions.
- Developed and finalized SRE documentation, including best practices, troubleshooting guides, and a consolidated knowledge repository for long-term scalability.
- Achieved successful implementation and stakeholder sign-off, ensuring a resilient, automated, and scalable SRE framework for TJX's supply chain operations.

Projects: 3

Organization: Tata Consultancy Services **Atlanta, USA**
Client : MACYS Inc, USA **2019-2024**

Project Summary: -
Macy's, Inc. is one of the nation's premier retailers, which sells brand-name clothing and accessories. It has online presence with a shopping website and Apps designed specifically for Apple (iPhone) and Android devices. Macy's Inc. has its IT department always collaborating with big thinkers to create innovation in Fashion Retail.

Allocation considers distribution quantities by item and store that will guide the movement of merchandise from the Distribution Center (DC) to the stores. Replenishment considers the distribution quantities by item and store for warehoused merchandise that is put away upon receipt for later shipment. The process also considers vendor to store (drop ship) and vendor to warehouse (reorder) situations. Managed three core applications: **Allocation System, IVS System, and F&D System(foresight)**, supporting Macy's supply chain and retail operations.

- Designed logical and physical data models for modernized supply chain systems integrated with GCP, BigQuery and Blue Yonder, improving data quality and reducing redundancy.
- Worked with cross-functional teams to translate business requirements into scalable data architectures.
- Performed schema optimization and indexing strategies in BigQuery to enhance performance for high-volume retail transactions.
- Led GCP migration, mainframe modernization, and performance optimization.
- Developed automation tools, reducing manual workload and improving forecast accuracy.
- Enhanced inventory reconciliation processes, aligning book stock and merchandise tracking.
- Provided integration and support for Blue Yonder solutions, ensuring streamlined supply chain execution.
- Managed cross-functional teams to deliver seamless business operations.

I have worked as Technical Project manager, Team Lead and Data Architect. We have deals with the following technology that has been involved Like **GCP (BigQuery, Dataflow, Pub/Sub, Cloud Storage, Apache Beam, Cloud Run, Kubernetes & Spanner), Mainframe (DB2, Cobol, JCL, VSAM, CICS, MQ), Java, Unix script, VB, .Net, Teradata, Oracle, Stored procedure, SSIS package and DataStage**.

Projects: 4

Organization : Tata Consultancy Services **Denmark, India.**
Client : Tele Denmark communication, Denmark **2016-2019**

Project Summary: -
The Columbus system serves as the primary order management application for TDC, facilitating online ordering for various predefined services. It features a web and XML-based interface for order acceptance and a native CICS environment for order entry and inquiry by business users. The system integrates with multiple subsystems to validate inputs and outputs via a rule engine, ensuring efficient order processing.

Key Responsibilities:

- Contributed to data modeling activities by creating entity-relationship diagrams and standardizing attributes across interfacing systems.
- Optimized COBOL-DB2 data structures based on access patterns and query performance metrics.
- Led the migration of legacy systems, including transitioning from Oracle to COBOL-based systems, ensuring seamless data transfer and system functionality.
- Collaborated with stakeholders to collect and analyze business requirements, translating them into technical specifications.
- Developed Detailed Program Design (DPD) and High-Level Design (HLD) documents to guide development and implementation.
- Engaged in COBOL programming for system enhancements and maintenance, ensuring robust and efficient code.
- Utilized DB2 for database operations, ensuring data integrity and optimized performance.
- Developed and maintained CICS transactions and Job Control Language (JCL) scripts for batch processing.
- Employed tools such as SPUFI, RSPMAIN, HPPM, HPSM, FILEAID, and CYKLUS to support various aspects of telecom deliverables.

Projects: 5

Organization : Cognizant Technology Solutions, Kolkata **Kolkata, India.**
Client : ABN AMRO, Netherlands **2012-2014**

Project Summary: - The project involved the installation of **Pro Active Risk Manager (PRM)**, a comprehensive fraud detection solution developed by ACI, for ABN AMRO's Internet Banking services. PRM utilizes strategic user-defined rules and advanced neural network technology to detect various types of fraud, including credit card, debit card, private label card, merchant, and money laundering activities.

Key Responsibilities:

- Participated in designing **data models** to support fraud detection logic, ensuring efficient storage and retrieval of transactional risk data.
- Conducted model reviews and ensured alignment with data governance and compliance standards.
- Conducted discussions and workshops with clients to understand Business Requirement Specifications (BRS) and Functional Requirement Specifications (FRS).

- Prepared High-Level Design (HLD) documents and reviewed Low-Level Design (LLD) documents, including source code.
- Assisted the team in various phases of testing, including System Integration Testing (SIT), Validation Testing (VT), and User Acceptance Testing (UAT).
- Managed database activities, including the installation and testing of Data Definition Language (DDL) components provided by ACI.
- Worked with DB2 version 10 and automated several DB2-related activities to enhance efficiency.
- Handled the installation and testing of stored procedures provided by ACI and managed batch job scheduling using OPC tools.
- Managed all relevant documentation, including release manuals, user manuals, and deployment checklists.
- Provided permanent and temporary fixes for job abends and maintained housekeeping jobs.
- Managed end-to-end batch environments and scheduled applications in OPC.
- Delegated tasks and coordinated with team members regarding allocated tasks.
- Ensured full compliance with quality norms and adherence to Cognizant 2.0 tools.
- Gained a comprehensive understanding of the business and workflow of various applications.
- Participated in innovation activities to enhance project outcomes.

Projects: 6

Organization : Cognizant Technology Solutions **Kolkata, India.**
Client : John Hancock, USA **2014-2015**

Project Summary: -
LifePRO is a policy administration system developed by EXL for John Hancock, handling the complete lifecycle of long-term care (LTC) insurance policies, including maintenance, transactions, maturity, and termination. The project involved production support, bug fixes, enhancements, and development activities. The system was built using .NET (frontend) and Fujitsu COBOL with SQL Server 2005 (backend).

Key Responsibilities:

- Conducted feasibility analysis for Business Requirement Specifications (BRS) and Functional Requirement Specifications (FRS).
- Contributed to High-Level Design (HLD) and Low-Level Design (LLD) documentation.
- Provided production support, including monitoring batch cycles and resolving production bugs.
- Led the development and enhancement of features, adhoc reports, and data extracts.
- Coordinated with the System Integration Testing (SIT) team to ensure bug-free delivery.
- Conducted training sessions for new team members.
- Prepared deployment documents, including release manuals, user manuals, and checklists.
- Assisted with Validation Testing (VT) and User Acceptance Testing (UAT) in collaboration with clients.
- Reviewed LLD documents and source code to maintain high coding standards.
- Managed code deployment planning and submitted SIT closure reports to the Release Management team.

Projects: 7

Organization: Syntel limited. **Pune, India**
Programmer Analysis. **2009-2012**

Project Summary: BECC is an integrated production support and enhancement project for Humana Inc., one of the largest health benefits providers in the USA. The project focused on maintaining and optimizing critical systems across Billing, Enrollment, and Customer Care portals, ensuring seamless operations and system performance.

Key Responsibilities:

- Performed requirement analysis and impact assessment for business needs.
- Analyzed and resolved production abends across multiple environments.
- Led performance tuning initiatives to enhance system efficiency.
- Generated daily/weekly reports and handled quality assurance tasks.
- Provided maintenance, enhancement, and support for key applications.
- Acted as a liaison between technical and development teams.
- Delegated and reviewed tasks to maintain high-quality standards.
- Designed, developed, and tested business requirements and code logic.
- Identified and addressed defects at various phases, ensuring timely resolution.

Certifications and Achievements :

- PSM1 and PSM II certification
- Generative AI Foundation Curriculum
- Professional Cloud Architect – Google Cloud
- PSM I & PSM II – Scrum Master Certification
- IBM DB2-730 Certified
- Multiple awards from TCS, Cognizant, and Syntel for project excellence and innovation.

Education

B.Tech in Electronics & Communications
