# BESTHA MURALI

8123408760 • besthamurali55@gmail.com • www://linkedin.com/in/murali-bestha-053b3357/

## SUMMARY

Overall, 5.5 years of Experience, Data Engineer with 4 years of extensive expertise in Bigdata / Hadoop technology stack using Apache Spark, Hive, Sqoop, HDFS, AWS, Python, SQL, PySpark.

## TECHNICAL SKILLS

**Primary Skills:** Bigdata Ecosystem, HDFS, Hadoop, Hive, Sqoop, Spark/PySpark, AWS, ETL, Data Warehousing, Linux

**Secondary Skills:** Python (Pandas), Scala, SQL, Airflow, Databricks, Amazon connect, Elastic Search, Control-M

**Languages:** English, Telugu, Hindi

## PROFESSIONAL EXPERIENCE

**Smartbeings Software Innovations Pvt Ltd, Bangalore: Data Engineer** Nov 2022 – July 2025

- Developed and maintained scalable batch data pipelines using AWS Glue, AWS Step Functions, and Lambda for processing large volumes of raw data, ensuring timely and accurate data delivery to stakeholders. Collaborated with cross-functional teams to gather business requirements and translate them into technical solutions.
- Collaborated with cross-functional teams to gather business requirements and translate them into efficient AWS-based data solutions.
- Implemented data quality checks and validation procedures using AWS Glue DataBrew and AWS Lambda, leading to a 25% reduction in data-related errors.
- Designed and optimized ETL pipelines using AWS Glue (PySpark), resulting in a 40% improvement in data processing efficiency. Worked on Sqoop import/export with incremental load to extract the data into HDFS.
- Worked on Spark optimization techniques at both code-level and cluster resource-level to enhance performance. Utilized Scala Spark and Spark DataFrames for data processing and transformation, loading data into Amazon Redshift and S3-based data lakes.
- Implemented AWS Database Migration Service (DMS) and AWS Glue Crawlers for seamless data ingestion and schema evolution.
- Optimized query performance in Amazon Athena and Redshift using Partitioning, Distribution Keys, and Sort Keys for efficient data retrieval.
- Design and development DAGs to automate workflows (ETL/ELT, data processing).
- Scheduling jobs using appropriate operators (PythonOperator, BashOperator, BranchOperator).
- Monitoring the Airflow UI and logs for DAG runs, task status and failures.
- Setup and configure Amazon connect instances Manage Users, Profiles and Security Permissions.
- Integrate with other AWS Services (Lambda, S3, DynamoDB).
- Monitor database health using tools like *MongoDB Atlas, Ops Manager, or Cloud Manager*.
- Optimize indexes, queries, and schema design.
- Tune performance for high availability and scalability.

**Ernst & Young LLP, Bangalore: Consultant** Feb 2022 – July 2022

- Worked on Sqoop import/export with incremental load to extract the data into HDFS.
- Worked on Hive optimization performance using Partitioning, Bucketing and Map on both Managed and External tables.
- Created and managed Hive tables with appropriate partitioning, bucketing, and indexing to optimize query performance.
- Developed complex HiveQL queries and scripts to clean, transform, and load data into the final schema. Utilized advanced Hive functions for data manipulation, including window functions, string functions, and conditional expressions.
- Optimized Hive queries by analyzing query execution plans, tweaking table design, and leveraging partitioning, bucketing, and file formats like ORC to enhance performance.

- Successfully implemented a robust data warehousing solution that reduced query execution times by 40% and enabled the generation of critical business reports, leading to improved decision-making processes for the client.

**Corefront Technologies, Bangalore: Bigdata Developer** Sep 2019 – Jan 2022

- Troubleshooting EAI, SSP and webMethods issues L1 and L2.
- Mentored the newly onboard consultants as per the required timelines and ensuring on the quality
- Generated reports on a weekly and monthly basis with the customer and presented the same
- Effectively handled multiple customers connects with various application teams
- Handled UAT Support debugging critical issues ensuring on the SLA
- Setup monitoring on the EAI servers based on the UAT requests
- Conducting working sessions with the Application teams and Business personnel
- Knowledge of AWS services: You should have experience with AWS services such as S3, Redshift, EMR, Glue, Kinesis, and Athena. You should also be familiar with other AWS services like EC2, Lambda, CloudFormation, CloudWatch, and IAM.
- Experience with ETL tools: You should be familiar with ETL (Extract, Transform, Load) tools like AWS Glue.
- Experience with data warehousing: You should have experience with data warehousing concepts, such as data transformation, data migration, and data integration.
- Design, implement, and optimize data architectures using AWS services.
- Design, create and manage batch jobs using Control-M
- Automate workflows across various platforms like: Windows, Databases, Cloud.
- Monitor job executions, Investigate and resolve job failures or delays.

## EDUCATION

- **Bachelor of Engineering in IT (Information Technology)**

  S.K.T.R.M College Engineering, Mahboob Nagar. (Hyderabad, JNTU)
