mohodsudesh1@gmail.com

Karve Nagar, Pune

EDUCATION

Bachelor's degree
Nagpur University
2018

SKILLS

- Python
- SQL
- Big Data
- ETL
- NoSQL
- Azure
- Azure Data Factory
- ADLS
- AWS
- AWS Glue
- AWS S3
- AWS Redshift | RDS | Lambda | SageMaker
- Data Validation
- Data Warehousing
- Data Mining
- Data Modelling
- Data Migration
- Communication
- Teamwork
- Critical thinking
- Time management
- Leadership

ACHIEVEMENTS

Award/Achievements
Employee of the month
2024

PROFESSIONAL OVERVIEW

Data Engineer with **4.6+ years** of experience in Data Engineering, Big Data technologies and Data Analysis, Proficient in Python, PySpark, Databricks SQL, ETL, AWS, Azure Cloud, GIT with expertise in building and managing scalable data pipelines using Azure Data Factory. Skilled in Data Mining, Data Preparation, Data Modelling and ETL processes, ensuring high-quality data flow for analytical and business needs. Experienced in handling large datasets, working with cloud platforms for data storage and processing. Strong knowledge of Proof of Concepts (PoC) and gap analysis to drive data-driven solutions for enterprise applications.

PROJECTS EXPERIENCE

1. AIS Data Lake

Advanced Info Service Public Company Limited, Thailand

Oct 2022 – present

Domain: Broadcast and Telecommunications

Project Objectives

- Built a **scalable, automated ETL pipeline on AWS (Glue, S3, Redshift, Airflow)** to process TV schedules, user logs, and billing data, reducing manual effort and latency from hours to near real-time.
- Implemented a **Medallion Architecture (Bronze-Silver-Gold)** with schema validation, deduplication, and SCD Type-2 to ensure **high-quality, analytics-ready datasets**.
- Optimized **Spark jobs and Redshift queries** with partitioning, Parquet storage, and push-down predicates for high performance at scale.
- Integrated **data governance, security, and disaster recovery** with AWS Glue Data Catalog, IAM policies, S3 versioning, and Redshift snapshots.
- **Achieve End-to-End Orchestration:** Automated job scheduling, monitoring, and dependency management using Apache Airflow and AWS Step Functions, reducing operational overhead.

2. One Bridge Solution

Maersk, UK | Jan 2020 – Aug 2022

Domain: Shipping and Logistics

Project Objectives:

- Designed and optimized **end-to-end data pipelines in Azure** to process shipment forecasts, standardize data formats, and deliver actionable logistics insights.
- Implemented a **multi-layered data architecture** (Bronze, Silver, Gold) to ensure clean, structured, and analytics-ready datasets.
- Enabled **predictive analytics for demand forecasting and capacity planning** by integrating ML models into ETL workflows.
- Improved **data accessibility and decision-making** with automated ingestion, transformation, and visualization pipelines.

3. Legacy Insurance Data Migration to Databricks

Sterling Insurance, United Kingdom | Oct 2020 – Dec 2020

Domain: Insurance

Project Objectives:

- Led the **migration of an insurance data ecosystem from legacy platforms to Databricks**, integrating data from **YouTube API, S3, Oracle, MySQL, and Kafka** for real-time analytics.
- Designed and implemented **Spark-based ETL pipelines with Databricks Auto Loader** to automate ingestion, transformation, and scaling of large datasets.
- Established a **Delta Lake architecture** for reliable, ACID-compliant storage and optimized query performance.
- Strengthened **data governance, security, and compliance** using Unity Catalog with fine-grained access controls.
- Delivered a **phased migration strategy** (assessment, incremental migration, validation, optimization) ensuring minimal downtime, data integrity, and improved system scalability.
