About Me

I am a skilled data engineer with over **6 years** of experience, known for my ability to design and implement robust data solutions that empower organizations to derive actionable insights and optimize their business processes. My expertise spans a range of technologies, including **Hadoop, Hive** and **SQL** with a solid 1.3 - year track record in hands-on experience. Additionally, I bring up to 3 years of proficiency in **AWS** also 4 years of expertise in **Python** and **Pyspark**, additionally 1 year of experience with **Databricks**. This diverse skill set not only enhances my technical capabilities but also allows me to mentor newcomers in related technologies.

TECHNICAL SKILLS

- **AWS**
  S3, EMR, Glue, Lambda, SNS, Step Function, Event Bridge, IAM,
- **IDE**
  Pycharm, Databricks, Jupyter Notebook, Vs Code Studio
- **PROGRAMMING LANGUAGES**
  Python, SQL
- **Data Warehouse**
  AWS Redshift, Hive
- **BIG DATA**
  HDFS, Hadoop, PySpark, Hive, Sqoop
- **DATABASES**
  Sql, MySql, Spark-Sql, Oracle
- **PLATFORMS**
  Windows, linux

PROJECT OVERVIEW

PROJECT 1

Unified Healthcare Data Platform

As Data Engineer

EMONICS Pvt Ltd(Dec24 - May 2025)

AWS Glue and **Databricks** Delta Lake enable rapid unification of three healthcare databases into a scalable S3 **data lake**, powering centralized analytics.

Responsibilities

- Contributed to the design and implementation of an **AWS S3** data lake for centralized data storage.
- Developed **AWS Lambda** functions for automated RDS snapshot and data export processes.
- Assisted in the creation and execution of **AWS Glue** jobs for data transformation.
- Participated in the migration of processed data into **Databricks Delta Lake tables**.
- Implemented multiprocessing techniques within Databricks **notebooks** to improve data loading efficiency.
- Supported the migration of historical data into Databricks for enhanced analytics.
- Aided in the testing and validation of data pipelines.
- Assisted in the documentation of data migration processes.

PROJECT 2
DL MIGRATION

As AWS Data Engineer
Future Focus Infotech(Dec23 - Nov24)

The project unifies data from three distinct databases by migrating it to an **AWS S3 data lake**, then into **Databricks-managed tables**, providing a centralized and scalable solution for data processing and analytics.

Responsibilities

- Established an **AWS S3 bucket** as a centralized **data lake** for three distinct business processes, automating **RDS** snapshots and exporting them to a raw S3 bucket using **AWS Lambda**.
- Triggered an **AWS Glue job** for data processing, with the processed data stored in a dedicated S3 bucket for analytics.
- Migrated the processed data to **Databricks-managed tables** and utilized multiprocessing in Databricks notebooks for efficient loading of data from RDS into **Delta tables**.
- Successfully migrated **historical data** from all three processes into Databricks, enhancing overall data accessibility and analytics capabilities.

PROJECT 3
AWS CLOUD BASE DATA MIGRATION

As Data Engineer
At ABWEB Infotech (June22 - Nov23)

The project aimed to build a **Data Warehouse** for the client using **AWS** services like **S3, IAM, Glue, Lambda,** and **Redshift**, centralizing data from multiple sources into a unified system.

Responsibilities

- Created a landing **S3 bucket** for data storage, using **Boto3** to upload data frames.
- Set up a **Glue job** to migrate data from the landing to the final S3 bucket.
- Developed a **Lambda function** to trigger jobs upon file upload and verify data transfer to the final bucket.
- Implemented **AWS Redshift** as the **data warehouse**, using the COPY command to load data from the final S3 bucket.

PROJECT 4
DATA MIGRATION AND MANAGEMENT

As Data Engineer
At ABWEB Infotech (Jan21 - Sep22)

This project mainly focusses on **cleaning** and **transforming** client data as per their requirements and providing final data for further visualization

Responsibilities

- Built **AWS S3** landing bucket and automated workflows with **Lambda**, **Step Functions**, and **Glue** for data transformation, with **SNS** alerts for failures.
- Developed transformation scripts to clean and load data into final S3, ensuring **data consistency** and accuracy.

PROJECT 5
HADOOP DATA MANAGEMENT

As Data Engineer
At ABWEB Infotech (Aug19 - Nov20)

This project aims to **ingest** retail store **data** from a mainframe system into a **Data Warehouse.**

Responsibilities

- Imported data from **RDBMS** (Oracle, MySQL) and flat files into Hive using **Sqoop**, optimized with static/dynamic partitions.
- Created efficient **Hive tables**, handled data **validation**, quality checks, and supported multiple file formats (Text, ORC, Delimited).
- Translated business requirements into technical **ETL workflows** and **data pipelines**.

Education History

- **Bachelor of Science in**
  Computer Science
  Year of Graduation: 2019

Employment History

- **EMONICS PVT LTD**
  service : *Dec 2024 - May 2025*
- **Future Focus Infotech PVT LTD**
  service : *Dec 2023- Dec 2024*
- **ABWEB INFOTECH PVT LTD**
  service : *May 2019- Dec 2023*

DECLARATION

I hereby declare that all the information mentioned above is true and to the best of my Knowledge.
