Ajith V

ajithkumar.Frontenddev@gmail.com | +91- 9731260540| Bangalore, India

Front-End Developer (React.js Specialist) | 5 Years of Experience

Expert in crafting high-performance, scalable, and maintainable web applications using React 18+, Next.js 14, TypeScript, and cutting-edge UI architectures. Skilled in modern front-end ecosystems, with a strong focus on performance optimization, state management, and developer experience.

Technical Skills

Category	Technologies
Front-End	React.js, Next.js 14, TypeScript, JavaScript (ES6+), HTML5, CSS3
State Management	Redux Toolkit, Zustand, React Query, Jotai, Apollo Client, SWR
Styling	Tailwind CSS, CSS Modules, Styled-Components, ShadCN/UI, Material-UI
Backend Integration	RESTful APIs, GraphQL (Apollo/Relay), WebSockets, tRPC
Testing	Jest, Vitest, React Testing Library, Cypress, Playwright
Performance Optimization	Code Splitting, Lazy Loading, Memoization, Web Vitals, Edge Functions, RSC
Dev Tools & Deployment	Vite, Turborepo, Webpack, pnpm/npm/yarn, GitHub Actions, Vercel, Docker
Methodologies	Agile (Scrum/Kanban), CI/CD, Monorepos, Micro-Frontends, TDD, E2E Automation

---

Professional Experience

Software Engineer – Capgemini, Bangalore from *Sep 2020 – Present*

Project #1: Netmeds Portal Development

Domain: Healthcare | **Tech Stack:** React 18, Next.js 14 (App Router + RSC), TypeScript, Zustand, GraphQL (Apollo), Tailwind CSS, Jest, Cypress, Vercel

Description:
Developed a **next-generation healthcare portal** for Apollo Hospitals to streamline **patient appointments, doctor consultations, and health record management**. The platform supports **real-time updates, multi-device compatibility, and secure access to medical data**.

Contributions & Impact:

- Built and maintained a **Next.js 14 application** using **React Server Components (RSC)** for streaming SSR and **partial hydration**.
- Migrated legacy Redux → **Zustand + React Query**, making state management **leaner and faster**.

- Integrated **Apollo Client** for real-time GraphQL data queries and mutations.
- Optimized **Lighthouse performance by 40%** through caching, image optimization, and code splitting.
- Deployed **Edge Functions on Vercel** to reduce **TTFB and API latency**.
- Implemented **Vitest + Cypress** tests in CI/CD pipelines to improve code reliability.

Project #2: Big Basket e-Commerce Platform

Domain: E-Commerce | **Tech Stack:** React 18, Next.js 14, TypeScript, Zustand, Styled-Components, tRPC, Playwright, Turborepo

Description:
Designed and implemented a **scalable e-commerce SaaS platform** for Amsoil, enabling **B2B and B2C users** to browse, purchase, and manage products. Focused on **scalability, speed, and developer productivity** using modern React and Next.js features.

Contributions & Impact:

- Designed a **micro-frontend architecture with Turborepo**, ensuring scalable module delivery.
- Migrated REST APIs → **tRPC** for **end-to-end type safety and faster API development**.
- Enhanced checkout flow with **Optimistic UI updates + SWR revalidation**.
- Reduced **JavaScript bundle size by 35%**, improving app speed and SEO.
- Automated **E2E testing with Playwright**, reducing manual QA workload by **25%**.

Education
B.Com – Vikrama Simhapuri University, Deemed to be University.

Key Achievements
Achieved 30% faster TTFB using Next.js middleware and edge caching.
Reduced client-side JS payload by 50% by adopting React Server Components.
Mentored 3+ developers on best practices with React 18, Zustand, and TypeScript.
Conducted internal tech sessions on modern state management and Next.js 14 architecture.
