PROFESSIONAL SUMMARY

- ✓ 9.5 years of experience in IT industry, related to various aspects involving Data integration and Data warehousing techniques, using ETL tools like Informatica Power Center 10.2/9.6/9.1, Informatica Intelligent Cloud Services (IICS) CDI & CAI.
- ✓ Experience integrating data to/from On-premises database and cloud-based database solutions using Informatica intelligent cloud services.
- ✓ Developed Cloud integration parameterized mapping templates (DB, and table object parametrization) for Stage, Dimension (SCD Type1, SCD Type2, CDC and Incremental Load) and Fact load processes.
- ✓ Extensively used Parameters (Input and IN/OUT parameters), Expression Macros and Source Partitioning Partitions.
- ✓ Developed MASS Ingestion tasks to ingest large datasets from on-prem to Azure Data Lake Store – File ingestion.
- ✓ Developed complex Informatica Cloud Task flows (parallel) with multiple mapping tasks and task flows.
- ✓ Developed integrations using Informatica Cloud Data Integration (IICS – CDI Service) For Google Analytics.
- ✓ Worked with API/Web Services using application integration for EATON Supplier (End point) using JWT.
- ✓ Experience working with traditional on-premises databases including Oracle, SQL Server and Teradata.
- ✓ Worked with different non-relational Databases such as Flat files, XML files.
- ✓ Worked extensively with Data migration, Data Cleansing, Extraction, Transformation and Loading of data from Multiple Sources to Data Warehouse
- ✓ Instrumental in setting up standard ETL Naming standards & BEST Practices throughout the ETL process (Transformations, sessions, maps, workflow names, log files, bad files, input, variable, output ports)
- ✓ Experience in implementing the complex business rules by creating re-usable transformations, developing complex Mapplets and Mappings, PL/SQL Stored Procedure and Triggers.
- ✓ Extensive experience in UNIX Shell Scripting, AWK and file manipulation techniques.
- ✓ Good exposer on Data warehouse concepts, Data warehouse development processes, tuning ETL sources, mappings, targets and sessions for better performance in turn ensuring optimum usability.
- ✓ Profound in working with the team and alone as well.
- ✓ Excellent Communication and demonstration skills.
- ✓ Excellent problem-solving skills with strong technical background and good interpersonal skills. Quick learner and excellent team player, ability to meet deadlines and work under pressure.

TECHNICALSUMMARY:-

Operating System	Windows XP, Windows 7 Enterprise, Unix.
Cloud Storage	Snowflake, Azure Blob/ADLS, AWS S3, Salesforce
Database	Oracle 9i/10g/11g, Teradata and Hive
Languages	SQL, PLSQL
Supporting Tools	WinSCP, Putty, WLM and Juniper Network connect 7.2, Teradata SQL Assistance.
ETL	Informatica Power Center 8.6/9.1/9.5/9.6.1,10.2, Informatica BDM 10.1, Informatica Cloud Data integration (CDI), Cloud Application Integration (CAI)
Cloud Database	Hive, HBase, Sqoop, Spark,

Education Summary

Chandrasekhar Challa

Mobile: +91 8748925487

Email: ChandrasekharChalla09@gmail.com

- **Master of Computer Applications (MCA)** from **JNTU Anantapur, 2013**.

Job Summary

- Currently Working in MSH Business Consulting Private Limited from Dec-2024 To Till date.
- Worked in Wipro Technologies from May-2022 to Dec-2024.
- Worked in Accenture Solutions Pvt Ltd from April-2019to Apri-2022 date.
- Worked in Cognizant Technologies Solutions from June-2016 to March-2019.

Project Summary

Project #6

Title **: ADT Securities, USA.**
Client **:** ADT, USA.
Domain **:** Security Systems
Role **:** ETL Developer
Duration **:** Dec-2024 to Till Date
Environment **:** IICS Cloud Data integration (CDI), Cloud Application Integration (CAI), Oracle 11g, UNIX,Informatica Powercenter, Teradata, Hive, Google Big Query.

Description:

This Project is for an Security System's, and it maintains account details of clients, and security descriptions, and Insurance and Monitoring services. This project needs of the strategic report with the help of which it can make better business decisions, analyze the market and daily changing trends. The client using the Database for handling the day-to-day transaction and to generate the business analysis. This system provided limited option for analysts to generate report for future business forecasting and to develop business strategies. The project describes the high-level design of the data warehouse system. The whole process is automated, and the Extraction, Transformation and Loading are done using Informatica Tool.

Responsibilities:

- ✓ Worked with the IT architect, Program managers in requirements gathering, analysis, and project coordination
- ✓ Developed Data Integration Platform components/processes using Informatica Cloud Platform,Snowflake technologies
- ✓ Analyzed existing ETL Datawarehouse process and ERP/NON-ERP Applications interfaces and created design specification based on new target Cloud Datawarehouse (Snowflake) and Data Lake Store
- ✓ Created ETL and Datawarehouse standards documents - Naming Standards, ETL methodologies and strategies, Standard input file formats, data cleansing and preprocessing strategies
- ✓ Created mapping documents with detailed source to target transformation logic, Source data column information and target data column information
- ✓ Designed, Developed and Implemented ETL processes using IICS Data integration
- ✓ Created IICS connections using various cloud connectors in IICS administrator
- ✓ Installed and configured Windows Secure Agent register with IICS org

Project #5

Title **: Charles Schwab, USA.**
Client **:** Schwab, USA.
Domain **:** Bank
Role **:** ETL Developer
Duration **:** May-2022 to Dec-2023
Environment **:** IICS Cloud Data integration (CDI), Cloud Application Integration (CAI), Oracle 11g, UNIX,Informatica Powercenter, Teradata, Hive, Google Big Query.

Description:

This Project is for an typical investment bank, and it maintains account details of clients, and security descriptions, Treasury services. This project need of the strategic report with the help of which it can make better business decisions, analyze the market and daily changing trends. The client using the Database for handling the day-to-day transaction and to generate the business analysis. This system provided limited option for analysts to generate report for future business forecasting and to develop business strategies. The project describes the high-level design of the data warehouse system. The whole process is automated and the Extraction, Transformation and Loading are done using Informatica Tool.

Responsibilities:

- ✓ Worked with the IT architect, Program managers in requirements gathering, analysis, and project coordination
- ✓ Developed Data Integration Platform components/processes using Informatica Cloud Platform,Snowflake technologies
- ✓ Analyzed existing ETL Datawarehouse process and ERP/NON-ERP Applications interfaces and created design specification based on new target Cloud Datawarehouse (Snowflake) and Data Lake Store
- ✓ Created ETL and Datawarehouse standards documents - Naming Standards, ETL methodologies and strategies, Standard input file formats, data cleansing and preprocessing strategies
- ✓ Created mapping documents with detailed source to target transformation logic, Source data column information and target data column information
- ✓ Designed, Developed and Implemented ETL processes using IICS Data integration
- ✓ Created IICS connections using various cloud connectors in IICS administrator
- ✓ Installed and configured Windows Secure Agent register with IICS org
- ✓ Extensively used cloud transformations – Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Update Strategy, Union Transformations
- ✓ Developed Cloud integration parameterized mapping templates (DB, and table object parametrization) for Stage, Dimension (SCD Type1, SCD Type2, CDC and Incremental Load) and Fact load processes

Project #4

Title **: Royal Bank of Canada (RBC), USA.**
Client **:** City National Bank, USA.
Domain **:** Bank
Role **:** ETL Developer
Duration **:** April-2019 to May-2022

Environment **:** Oracle 11g, UNIX,Informatica IICS (CDI), IDQ 10.4.1.

Description:

Los Angeles-based City National Bank offers a full complement of banking, trust and investment services through 71 offices, including 19 full-service regional centers, in Southern California, the San Francisco Bay Area, Nevada, New York City, Nashville, Atlanta, Minneapolis and Washington, D.C. Its 4,900 colleagues deliver highly personal service and complete financial solutions to entrepreneurs, professionals, their businesses and their families. Through its subsidiaries, including City National Rochdale, LLC, City National Securities, Inc.; First American Equipment Finance and other affiliated companies, City National also makes available wealth management, brokerage and leasing services among others. On November 2, 2015, City National merged with Royal Bank of Canada.

Responsibilities:

- ✓ Worked with the IT architect, Program managers in requirements gathering, analysis, and project coordination
- ✓ Developed Data Integration Platform components/processes using Informatica Cloud Platform,Snowflake technologies
- ✓ Analyzed existing ETL Datawarehouse process and ERP/NON-ERP Applications interfaces and created design specification based on new target Cloud Datawarehouse (Snowflake) and Data Lake Store
- ✓ Created ETL and Datawarehouse standards documents - Naming Standards, ETL methodologies and strategies, Standard input file formats, data cleansing and preprocessing strategies
- ✓ Created mapping documents with detailed source to target transformation logic, Source data column information and target data column information
- ✓ Designed, Developed and Implemented ETL processes using IICS Data integration
- ✓ Created IICS connections using various cloud connectors in IICS administrator
- ✓ Installed and configured Windows Secure Agent register with IICS org
- ✓ Extensively used performance tuning techniques while loading data into Snowflake using IICS
- ✓ Extensively used cloud transformations – Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Update Strategy, Union Transformations
- ✓ Developed Cloud integration parameterized mapping templates (DB, and table object parametrization) for Stage, Dimension (SCD Type1, SCD Type2, CDC and Incremental Load) and Fact load processes
- ✓ Extensively used Parameters (Input and IN/OUT parameters), Expression Macros and Source Partitioning Partitions
- ✓ Extracted data from Snowflake to push the data into Azure warehouse instance to support reporting requirements
- ✓ Performed loads into Snowflake instance using Snowflake connector in IICS for a separate project to support data analytics and insight use case for Sales team
- ✓ Created scripts to create on demand Cloud Mapping Tasks using Informatica REST API
- ✓ Created scripts which will used to start and stop cloud Tasks (the scripts use Informatica Cloud API calls)
- ✓ Developed CDC load process for moving data from Peoplesoft to SQL Datawarehouse using “Informatica Cloud CDC for Oracle Platform”
- ✓ Developed complex Informatica Cloud Taskflows (parallel) with multiple mapping tasks and taskflows
- ✓ Worked with a team of 4 onshore and 6 offshore development teams and prioritizing project tasks
- ✓ Involved in Development, Unit Testing, SIT and UAT phases of project

Project #3:-

EIM_HSB **Aug-2018 to Mar-2019**

Title : EIM_HSB
Client : **HSB**
Domain : Insurance
Role : Informatica BDM Developer
Duration : Aug-2018 to March-2019
Environment : SQL server, HIVE, HBase,Sqoop, Windows 10 Pro,Informatica BDM 10.4.0.

Description:

The Hartford Steam Boiler Inspection and Insurance Company (HSB) is a global specialty insurer and reinsurer. The company is the largest provider of equipment breakdown insurance and related inspection services in North America serving over five million commercial locations. The Hartford Steam Boiler group is part of Munich Re, one of the world's largest reinsurers.

Responsibilities:

- ✓ Analyzing existing Informatica power center requirements and converting them into the Informatica BDM.
- ✓ Preparing Hive External,TEMP,WORK tables structures.
- ✓ Design and development of Informatica Mappings and converting them into the Informatica BDM mappings.
- ✓ Extracting the data from different sources like Oracle,Cobal files, Flat files and loading the data in to HIVE Database.
- ✓ Creating the Informatica BDM mappings using various transformations like Expression, Router, Joiner, Union.
- ✓ Creating several workflows and Applications using Informatica BDM.
- ✓ Preparing HIVE Queries to validate the data in both source and target databases.
- ✓ Developing, executing and documenting the Unit & SIT test plans and validating the test results.
- ✓ Involving in code migration from Development to SIT, and SIT to Production and jobs execution.
- ✓ Conducted knowledge sharing sessions within team to make awareness on Informatica BDM/processes.
- ✓ Analyzing the scenario,build mapping,workflow,Application.
- ✓ Did unit testing and prepare low level design documents.
- ✓ Involving in code migration from Development to FT, and FT to UAT and UAT to Production and jobs execution.
- ✓ Interacted with users during FT,UAT and deployed the code into Production.
- ✓ Interact with the clients for Requirements and Review calls.

Project #2:-

Chandrasekhar Challa

Mobile: +91 8748925487

Email: ChandrasekharChalla09@gmail.com

Farmers Insurance **Dec-2017 to July-2018**

Title **: Farmers Insurance**
Client **:** Farmers Insurance, USA
Role **:** ETL Developer
Duration **:** April-2018 to March-2019
Environment **:** Oracle 11g, UNIX, Windows XP, Flat files, InformaticaPowercenter 10.0.1.

Description:

Farmers Insurance is one of the major Insurance Company in US. There are multiple sources of information about the Company's customers, coverage's, covered items and policies. This project was started to act as a central data warehouse for policies and claims which is used to convert, extract and migrate the legacy data applications such as to stage and then to cleanse, process and loading into Data Marts.

Responsibilities:

- ✓ Designed and developed Informatica Mappings and Sessions based on business user requirements and business rules to load data.
- ✓ Performed extraction, transformation and loading of data from different sources like Flat Files, Oracle and COBOL file sources.
- ✓ Worked with DBA to set up the DEV and QA environment and various users and roles
- ✓ Used workflow monitor to monitor the jobs, reviewed session/workflow logs that were generated for each session to resolve issues, used Informatica debugger to identify issues in mapping execution
- ✓ Direct interaction with the client on providing the regular updates on the work status
- ✓ Interacted with users during UAT and deployed the code into Production.
- ✓ Given support in production for the jobs which we have developed.
- ✓ Involved in Unit Testing, preparing the test cases
- ✓ Involved in code reviews before delivery.
- ✓ Creating the TSD documents, DB object work book, WLM set up document.

Project #1:-

Investment Banking Management System **July-2016 to Nov-2017**

This Project is for an typical investment banking .and it maintains account details of clients, security descriptions, Treasury services. This project needs of the strategic report with the help of which it can make better business decisions, analyze the market and daily changing trends. The client using the Database for handling the day-to-day transaction and to generate the business analysis. This system provided limited option for analysts to generate report for future business forecasting and to develop business strategies. The project describes the high-level design of the data warehouse system. The whole process is automated and the Extraction, Transformation and Loading are done using Informatica Tool.

Client : ABN-AMRO Bank, Netherlands
Tools : Informatica Power Center 9.6.1 (ETL), Oracle, SQL, TOAD, Windows NT/2000
Type : Development And Support

Chandrasekhar Challa

Mobile: +91 8748925487

Email: ChandrasekharChalla09@gmail.com

Role **:**ETL Developer

Responsibilities:

- ✓ Worked on Power Center client tools like Source Analyzer, Warehousing Designer, Transformations
- ✓ Developer, Mapplet Designer and Mapping Designer.
- ✓ Used the transformations such as Source Qualifier, Expression, lookups, Router, Aggregator, Joiner, Update Strategy, Filter, Sequence Generator, and Sorter transformations for developing complex mappings.
- ✓ Used Workflow manager for Workflow and Session Execution.
- ✓ Imported data from various Sources transformed and loaded into Data Warehouse Targets using Informatica.
- ✓ Developing Informatica mappings and Involved in Unit Testing for developed mappings.
- ✓ Documentation to describe program development, Logic, Coding, Testing, Changes and corrections.
