SUMMARY

Creative and results-driven iOS Developer with 6+ years of experience building smart, scalable mobile apps using AI and computer vision. Key contributor to high-performance SDKs and a Shark Tank India Season 3-funded product featuring real-time face tracking and visual overlays. Skilled in deploying deep learning models on-device with TensorFlow Lite, ONNX, NCNN, and MNN. Experienced in cross-platform development using React Native, Flutter, and SwiftUI, with a strong focus on performance, clean architecture, and developer usability. Passionate about leveraging emerging tech to build impactful, intuitive apps.

EDUCATION

- **B.Tech in Mechatronics, Robotics & Automation Engineering** **2014 – 2018**
  SVKM's Narsee Monjee Institute of Management Studies (NMIMS)

SKILL SUMMARY

- **Languages:** Swift, Objective-C, Java
- **Frameworks:** UIKit, Core Data, SwiftUI, TensorFlow, OpenCV
- **AI/ML:** TFLite, ONNX, MNN, NCNN
- **Tools:** Xcode, Git, Jira, Firebase
- **Practices:** MVVM, Agile/Scrum, Manual Testing, Shader Programming
- **Platforms:** iOS, watchOS, Android
- **Soft Skills:** Problem Solving, Analytical Thinking, Attention to Detail, Adaptability, Communication, Teamwork, Time Management, Innovation, User-Centric Thinking

WORK EXPERIENCE

IOS Developer | Niyogin AI Pvt Ltd | Mumbai — June 2024 – Present

- Played a key role in developing SDKs for both iOS and Android platforms
- Provided technical support and clear documentation to help clients with smooth integration
- Led SuperScan SDK development with auto OCR, Aadhaar masking, face matching, and liveliness detection.
- Built cross-platform SDKs with a focus on usability and faster onboarding for external partners
- Integrated AI-driven modules to improve text recognition and facial verification results
- Collaborated closely with internal teams to ensure high performance and user-friendly design
- Contributed to improving the overall client experience and satisfaction through reliable solutions

IOS Developer | Orbo.ai | Mumbai — November 2020 – June 2024

- Developed a virtual makeup SDK and platform that gained national attention after being featured on Shark Tank India Season 3, helping boost interest from B2B clients
- Created BeautyGPT, an AI-powered beauty recommendation tool adopted by leading global cosmetics brands and widely used by end users
- Built Orbo faceSDK, enabling fast and accurate facial landmark detection for use in fintech and beauty tech applications
- Ensured compatibility of SDKs across multiple platforms including Flutter, React Native, and SwiftUI, making it easier for clients to integrate
- Supported the global expansion of the company's SDK suite, contributing to increased adoption and business growth across multiple countries

IOS Developer | Pixster Studio | Ahmedabad — January 2019 – October 2020

- Designed and launched Translate AI, a cross-platform app that gained strong user engagement and positive reviews
- Created video-to-GIF and Live Photo converter apps, appreciated for smooth performance and easy-to-use design
- Developed a Bluetooth-based tracker app that reliably detected nearby accessories and offered improved signal detection compared to similar apps

IOS Developer Intern | Elite Infoworld | Ahmedabad — September 2018 – December 2018

- Optimized legacy modules to enhance codebase performance and improved UI/UX across 3 active client projects.

PROJECT EXPERIENCE

SuperScan SDK – Niyogin AI Pvt Ltd

A high-performance identity verification SDK built for iOS and Android platforms, designed to accelerate digital onboarding for fintech, banking, and lending applications.

- Automated document capture with intelligent edge detection, auto-capture, and OCR for accurate identity data extraction.
- Aadhaar compliance via number masking, validation checks, and AI-powered data sanitization.
- Liveliness detection and real-time face matching to enhance security and prevent identity fraud.
  Impact: Enabled secure, paperless KYC, significantly reducing onboarding time and manual processing for enterprises.

BeautyGPT – Orbo.ai
An AI-powered beauty intelligence platform offering hyper-personalized makeup and skincare recommendations through generative AI.

- Deep-learning-based facial analysis for identifying skin tone, texture, and facial structure
- Real-time virtual try-on of beauty products, enabling immersive customer experiences
- Intelligent recommendation engine that matches user profiles to curated product suggestions
- Seamless integration into mobile apps and beauty brand interfaces
  Impact: Successfully launched as part of a Shark Tank India-funded project, this platform revolutionized user engagement and product discovery in the beauty tech space

Virtual Makeup Try-On SDK – Orbo.ai
An iOS SDK framework that provides a complete virtual makeup app structure, enabling seamless integration of beauty experiences.

- Handles API calls, data storage, and image downloads
- Enables real-time virtual application of makeup on live camera feeds.
- Designed for B2C use cases and easy developer adoption
  Impact: Empowered partner developers to deliver immersive beauty solutions efficiently.

Supertouch App – Orbo.ai
An AI-powered live camera-based makeup application that enables users to apply and preview makeup virtually in real time.

- Advanced face detection and landmark recognition for accurate makeup overlay
- Real-time application of virtual blush, eyeliner, lipstick, and other cosmetic elements
- Facial beautification using shaders, warping, and OpenGL-based rendering
- Custom photo and video capture options with high-fidelity output
  Impact: Delivered an immersive and interactive user experience, significantly increasing user retention and engagement in beauty-focused mobile applications

Orbo faceSDK – Orbo.ai
Lightweight facial recognition SDK for mobile with accurate face detection and landmark mapping.

- Swift–Objective-C–OpenCV hybrid architecture for high performance and flexibility
- Detection of multiple facial landmarks including eyes, nose, lips, and contour
- Optimized for on-device inference using deep learning models like TFLite and NCNN
  Impact: Widely adopted in commercial SDK integrations and internal product pipelines, ensuring real-time, on-device performance with minimal latency

Lipsy – Pixster Studio
A short-video editing and lip-sync app similar to TikTok, allowing users to create and share music videos.

- Video trimming, filters, and music synchronization tools
- Editable effects and social sharing features
  Impact: Enabled creative expression through easy-to-use video editing and lip-sync capabilities.

Translate AI – Pixster Studio
A multi-functional translation application offering a suite of language conversion tools through an intuitive and interactive interface.

- Voice-to-voice translation supporting multiple languages in real time
- Text-to-text translation with input history and editing functionality
- Image-to-text recognition and translation using camera input and OCR
- Social login options via Google, Apple, and Facebook for personalization
  Impact: Improved multilingual accessibility, leading to high user ratings and strong adoption in education and travel sectors.

Video to Live & GIF Converter – Pixster Studio
A suite of apps that allow conversion and editing of videos, GIFs, and Live Photos.

- Multiple format conversions: video to GIF, Live Photo to video, and more
- Advanced controls: trimming, reversing, applying filters, and speed adjustments
  Impact: Gained a strong user base for its seamless performance and intuitive editing tools.

Find My Bluetooth Headphones – Pixster Studio
A utility app to detect and locate Bluetooth accessories like AirPods and smartwatches.

- Detects nearby Bluetooth devices with signal strength tracking
- Compatible with various brands and devices
  Impact: Helped users reliably track and recover lost Bluetooth devices using a simple interface.

PUBLICATION

- **Designing and Trajectory Verification of SCARA**
  International Journal of Research and Analytical Reviews (IJRAR) | Published on: August 1, 2018
  Designed and validated a 3-DOF SCARA robot with a granular jamming-based universal gripper for industrial pick-and-place tasks. The study focused on kinematic modeling, trajectory accuracy, and the robot's suitability for compact, low-scale industrial environments.
