Mobile No:+919553113330

MailId:subhanisyyed@gmail.com **SUBHANI .SD**

Professional summary:

- Having **10+** years of experience in development of Enterprise Web Applications using Java and J2EE technologies.
- Having good Experience as a **Software Engineer** with Business Domain Knowledge like **US Health insurance.**
- Extensive development Knowledge in **JAVA, JDBC, Servlets, JSP, Web Services, Micro services Selenium TestNG, web driver** and JAVA/J2EE design patterns.
- Expertise in **spring, Struts, Mybatis and JPA Frameworks**.
- Having good experience implementing **Logs** using the **Log4J**.
- Working knowledge on Tomcat Server, Jboss and websphere.
- Good Knowledge in J2EE Technologies with good understanding of MVC.
- Involved in development of the Middle layer and presentation layer.
- Have strong analytical and programming skills. Strong knowledge in **Core Java**.
- Having Good exposure to bug reporting tool like SalesForces-12 and Jira.
- Good knowledge on tortoise SVN Central Repository for source check in and checkout process.
- Good Knowledge in banking, helthcare and Retail domains, designing and Developing N-tier application using J2SE and J2EE technologies.
- Capable of working in teams as well as independently with good communication, Interpersonal, Analytical and Problem solving skills.
- A quick learner, enthusiastic with a great passion for problem solving skills.
- Able to handle the tasks having stringent deadlines.
- Mentoring of Trainees and new joiners to the team.
- A systematic, organized and dedicated team player with an analytical bent of mind determined to be a part of a growth-oriented organization.

Professional Experience:

- Working as a sr software engineer in Mphasis Hyderabad from Feb 2022 to Till Date.
- Worked as consultant in Capgemini Hyderabad from Feb 2017 to Jan 2022
- Worked as a software engineer in CGI Group Inc, Hyderabad from May 2013 to Oct-2016.
- Worked as a software engineer in Manthan Systems Pvt, Ltd, Bangalore from Jan 2012 to Aug 2012.

Professional Qualification:

- **Master of Computer Applications** from Bharathidasan University, Trichy.

Technical Profile:

Languages	: Java, J2EE.
Internet Technologies	: JSP, Servet, Web Services HTML, XML, JQuery, JavaScript, AngularJS.
Framework	: Struts, Spring, Mybatis, SrringBoot, TestNG, Selenium, webdriver.
Design Patterns	: MVC, DAO, DTO & Singleton
Source Control Tools	: SVN, GIT
Development IDEs	: Eclipse, Jboss developer studio, STS, SQL Editor, SoapUI.
Application Architecture	: J2EE.
Platforms	: UNIX, Putty**,** WINSCP, Windows XP professional.
Application/Web Servers	: Tomcat6, Jboss-6.1, WebSphere.

Open Sources : POI, ITEXT.
Database : Oracle, MySQL, SQL Server Sybase.

PROJECTS EXPERIENCE:

Title : CDMT-SAVE Dashboard
Client : Schwab (06-2022to till date)
Organization : Mphasis Hyderabad.
Team Size : 4
Environment : Java, Spring GIT, Angular.

Description:
Core-risk rely on our leading hedge, private equity, real estate and fund of fund administration service. Schwab provides scale, service excellence and commitment to innovation. This has resulted in a record of bespoke solutions, continual product advances.
administration service includes: deployment event, performance of the applications and calculation of the score
Performance measurement Work paper preparation.

Responsibilities:

Developing and enhancing controller, ,services ,dao layer of java classes, Entity and java-utilclasses for interacting DB service, as sprint development.

Configured and modified properties files for application configuration.

Involved in Code Review as per the Coding Standards.

Created view, sql query for backend process.

Fixing the application issues and providing the Root cause analysis (RCA) on it update Jira.

Daily status updates in scrum calls.

Weekly once worked support ticktes of the application. Checking log with cloud watch,deploy the fixes in cloud service

Worked poc of migration on rav-reports and risk- application.

Project #1:

Title : Core-Risk-Dashboard
Client : Citco(06-2022to till date)
Organization : Mphasis Hyderabad.
Team Size : 4
Environment : Java, Spring GIT.

Description:
Core-risk rely on our leading hedge, private equity, real estate and fund of fund administration service. Citco provides scale, service excellence and commitment to innovation. This has resulted in a record of bespoke solutions, continual product advances.
fund administration service includes:

Hedge funds, funds of funds, managed accounts and family offices
Maintenance of books & records

Daily recorded profits & losses

Weekly NAV estimates

Monthly Master & Feeder NAV calculations

Fee calculation

Price verification

Private equity and real estate
Maintenance of books & records, capital accounts

Allocation of profits & losses

Accounting for investments

Performance measurement

Computation of fee waterfall

Work paper preparation

Financial reporting & audit assistance

Cash service.

Responsibilities:

- Developing and enhancing controller, ,services ,dao layer of java classes, Entity and java-utilclasses for interacting DB service, as sprint development.
- Configured and modified properties files for application configuration.
- Involved in Code Review as per the Coding Standards.
- Created view, sql query for backend process.

- Fixing the application issues and providing the Root cause analysis (RCA) on it update Jira.
- Daily status updates in scrum calls.
- Weekly once worked support ticktes of the application. Checking log with cloud watch,deploy the fixes in aws cloud service
- Worked poc migration of rav-reports and risk- application, with maven profiles.

Project #2:

Title : ADF (Australian defense force)
Client : SAP (07 2020to till date)
Organization : Capgemini Hyderabad.
Team Size : 4
Environment : Java, Spring Rest, spring, JMS, GIT.

Description:
ADF project disconnected mode process client and admin.

Business/user raises request in some portal of legacy system for procurement of asset and request details sent to S/4 HANA (1909) system via interfacing technology AIF (Application Interface Framework).
Upon receiving AIF message, different documents created (e.g. Internal Order, Asset Master & Purchase Requisition) will be created. The document created in this step needs to be updated in custom table (for reference) & trigger an outbound is sent. Next step, Purchase Order created with reference to Purchase requisition. The Purchase order also needs to be updated in custom table & trigger an outbound is sent.
Next step, supplier sends physical asset. This leads good receipt in the S/4 HANA. The goods receipt details was received via AIF which results in Material document posting. The Material documents needs to be updated in custom table & trigger an outbound is sent. Lastly, Supplier sends invoice via AIF which leads to purchase Invoice creation in the system in S/4 HANA. The Invoice documents needs to be updated in custom table & an outbound is sent There are many add-on process to complete in asset procurement (e.g. capitalization, depreciation, deactivation), let's not focus more subsequent business process and create technical flow using Daemon. Each Inbound/Outbound message or document create/change/delete can be considered as event in ABAP.

Responsibilities:

- Developing and enhancing Rest controller
- Created SAP ODATA Processor, Service classes, Entity and java-until classes for interacting DB services.
- Created and Entity using @Lombok.
- Configured and modified properties files for application configuration.
- Involved in Code Review as per the Coding Standards.
- Created view, sql query for backend process.
- Involved in Preparing the Unit Test Cases Using Mockit API and Power& Easy mockit.
- Fixing the application issues and providing the Root cause analysis (RCA) on it update Jira.
- Daily status updates in scrum calls.

Project #2

Title	: NGE (next generation experience)
Client	: Disney (01-2019 to till date)
Organization	: Capgemini Hyderabad.
Team Size	: 4
Environment	: Java, Spring Rest, spring, JMS, GIT.

Description:

The NGE Message Center solution is a platform that provides the ability for the various NGE modules to communicate to Guests via a variety of channels. Messaging will provide a real-time, on-demand messaging capability for NGE-specific topics in order to facilitate the Disney "One Voice" strategy for Guests communications. Message Center will provide an integrated approach for information retrieval to join data from disparate modules to increase potential messaging opportunities. The NGE Message Center acts as the Receive/Distribute hub for Inbound Message Events for Guest Messaging.

Responsibilities:

- Developing and enhancing Rest controller
- Created Rest Controller, Service classes, pojo and java-until classes for interacting DB services.
- Created and enhancing pojo classes using @Data.
- Configured and modified properties files for application configuration.
- Deploying the .war, jar files of the project in DEV, SYS, load, env using Jenkins.
- Involved in Code Review as per the Coding Standards.
- Involved in Preparing the Unit Test Cases Using Mockit API and Power& Easy mockit.

- Fixing the application issues and providing the Root cause analysis (RCA) on it.
- Daily status updates to client and Onsite management.

Project #2:

Title : SupplierPortal&Foundation
Client : Waitrose (UK_MDM). (08-2018 to 12-2018)
Organization : Capgemini Hyderabad.
Team Size : 5
Environment : Java8, Spring Rest, Spring Boot, IBMCE, Gradle, Bootstrap, GIT, Ajax, JQuery, GIT, wildly.

Description:
Supplier Portal Main goals of the project is an easy to use and robust MDM Supplier Portal will provide suppliers with the ability to keep their information up to date and accurate (which will include product information in the near future), improving both Waitrose and suppliers' product time to market.
Idea of the project is one existing screen for everything. It is very long and Suppliers think it is too long. Ability to complete part of the form, save and resume later. Time out currently log users out in the middle of the process. Timeout is security enforced, but there isn't any warning to users so they lose their data half way through. Mandatory fields are somewhat hidden and need to be hunted down. Unable to tell whether the form have been submitted.

Responsibilities:

- Involved in FSD doc analysis and designing documents based on the application requirement.
- Developing and enhancing Rest controller, defined reflection java class's to interacting groovy. Script which located file system in the server configuration.
- Created screen's to invoke the service using Ajax call.
- Created Rest Controller, Service classes, pojo and java-until classes for interacting web services using rest client's call to consuming data from MDM CE.
- Created and enhancing pojo classes using @Data.
- Created grid layout pages with json services data using jQuery,Bootstrap,Ajax
- Configured and modified yml files for application configuration.
- Deploying the .jar files of the project in DEV,SYS env using Jenkins.
- Involved in Code Review as per the Coding Standards.
- Involved in Preparing the Unit Test Cases Using Mockit API and Junit.
- Fixing the application issues and providing the Root cause analysis (RCA) on it.
- Understanding and preparing the technical (UTC&UTR doc's) & functional specifications docs of the application.
- Daily status updates to client and Onsite management.
- Supported the issues raised and resolved to QA Team and updated in the Jira bug tracker.

Project #3:

Title : AXA Employee Benefits
Client : AXA. (02-2018 to 08-2018)
Organization : Capgemini Hyderabad.
Team Size : 5
Environment : Java8, Spring Res, Spring boot, Spring Data, Maven, Angular, GIT, Microservies, PrimeNG, GIT, Eureka server .

Description:

AXA's Employee Benefits solutions are comprised of 15 insurance-based products in various combinations selected by corporate customers. The most common products in these packages include:

- Group Term Life Insurance
- Group Critical Illness Insurance
- Group Personal Accident Insurance
- Group Hospital and Surgical Insurance
- Extended Major Medical Insurance
- Group Outpatient Insurance
- Group Dental Insurance

Responsibilities:

- As part of T2 layer developing and enhancing Rest controller, defined feign client to interacting T3 layer.
- As part of T3 layer Developing Reporgitory Rest controller, repository classes, projection and predicate classes for interacting MySql, database.
- Configuring ORM.xml file for Entities for building ORM hql queries.
- Created and enhancing pojo classes for dozer mapping.
- Created grid layout pages with db data using angular 4 module, services, component ts files.
- Configured and modified yml files for application configuration.
- Micro service Registration with Spring cloud using Netflix Eureka
- Debugging the root cost and Bug fixing.

Project #4:

Title : HSBC RISK IT-Management.
Client : HSBC. (07-2017 to 01-2018)
Organization : Capgemini Hyderabad.
Team Size : 4
Environment : Java, J2EE, Spring Rest, Spring JDBC Templates, Oracle, Maven, Angular JS, Bootstrap, GIT, WAS App server.

Description:
1. Corporate real Estate (CRE)
2. American Disability Act (ADA)
CRE and ADA applications enable HSBC backed process based the application, CRErole creating project and send to the approval next level HOST RC's. As a Developer, responsible for developing the application creating User input screens using angular bootstrap api.

Responsibilities:
Developing and enhancing the application-context .xml file configurations.
Developing Rest Controller classes using Spring Rest, JDBC Templates Framework.
Developing Helper DAO, DTO and POJO classes for interacting ORACLE database.
Debugging the root cost and Bug fixing.

Project #5:
Title : IntelRX (Core Pharmacy)
Client : Cigna. (01-2016 to 12-2016)
Organization : CGI Hyderabad.
Environment : Java, J2EE, SpringMVC, WebServies, SQL Server, apache camel, Jboss App Server.
Team Size : 3

Description:

Cigna Corporation and its subsidiaries serve millions of people worldwide through medical, dental behavioral health, pharmacy, vision, life, accident.
IntelRx project enables messaging using SOA architecture between CIGNA and its partnering pharmacy which dispenses the drugs. As a Developer, responsible for developing the application and unit testing of Cigna SCO Drug List services get the request from Agadia [.Net App] the Rest services and forward it to Apache camel components. The Cigna SCO Drug List services enable new fulfillment request transmissions from Cigna to the dispensing partner PAHUB. It also includes the ability to facilitate supporting requests/responses based on various dispensing use cases including dispensing, cancellation, returns, and inquiry. Cigna's SCO Candidacy Rule API is supported as Soap services. The integration architecture supports synchronous and asynchronous communication patterns over HTTP/s protocol.

Responsibilities:

- Involved in FSD doc analysis and designing documents based on the application requirement.
- Involved in Design part for documentation of Class, Activity, sequence diagrams using SPARX tool.
- Developing and enhancing the Spring-config.xml, spring-camel-context.xml configuration and mapping files (.xml).
- Developing Rest Controller classes using Cigna internal framework (SA-Platforms) using SringMVC, Apache camel.
- Creating routes for process the request by using camel-EIP Integration patterns.
- Developing Helper DAO, DTO and Row Mapper classes for interacting SqlServer database.
- Involved in analyzing & development the existing code changed the Services to components as part of the replatforming.
- Involved in Code Review as per the Coding Standards.
- Involved in Preparing the Unit Test Cases Using Mockit API and Junit.
- Fixing the application issues and providing the Root cause analysis (RCA) on it.
- Understanding and preparing the technical (UTC&UTR doc's) & functional specifications docs of the application.
- Daily status updates to client and Onsite management people.
- Supported the issues raised and resolved to QA Team and updated in the ALM bug tracker.
- Involved in backend SQL Server database support by writing SQL queries.

Project #6:

Title : CHDP (Home Pharmacy)
Client : Cigna. (06-2015 to 12-2015)
Organization : CGI Hyderabad.
Environment : Java, J2EE, Drools, MyBatis 3.1.1, Web Services, spring, Sybase 6.0, Jboss App Server.
Team Size : 5

Description:

Cigna Corporation and its subsidiaries serve millions of people worldwide through medical, dental behavioral health, pharmacy, vision, life, accident.
AccelRx project enables messaging using SOA architecture between CIGNA and its partnering pharmacy which dispenses the drugs. As a Developer, responsible for developing the application and unit testing of Cigna Fulfillment Integration services to generate the messages and forward it to IBM Web sphere Message Broker components. The Cigna Fulfillment Integration services enable new fulfillment request transmissions from Cigna to the dispensing partner Catamaran. It also includes the ability to facilitate supporting requests/responses based on various dispensing use cases including dispensing, cancellation, returns, and inquiry. Cigna's fulfillment API is supported as Soap services. The integration architecture supports synchronous and asynchronous communication patterns over HTTP/s protocol. Participants are to use assured delivery behind the Soap services to meet the store and forward messaging requirements.

Responsibilities:

- Involved in development of Service Interface, Implementation Classes, and DAO classes.

- Developing and enhancing the Mybtics configuration and mapping files (mybtis-config.xml).
- Involved in analyzing & development the existing code changed the Services to components as part of the replatforming.
- Involved in Code Review as per the Coding Standards.
- Involved in Preparing the Unit Test Cases Using Mockit API and Junit.
- Fixing the application issues and providing the Root cause analysis (RCA) on it.
- Developed Interceptors classes for logging in log files using Apache Interceptors.
- Understanding and preparing the technical (UTC&UTR doc's) & functional specifications docs of the application.
- Daily status updates to client and Onsite management people.
- Supported the issues raised and resolved them and updated in the JIRA bug tracker.
- Involved in backend Sybase database support by writing SQL queries.

Project #7:

Title : One view Test Framework.
Client : Cigna. (11-2014 to 06-2014)
Organization : CGI Hyderabad.
Environment : Java, JDBC, TestNG, Selenium web driver, Html, Sybase, STS Tomcat.
Team Size : 3

Description:

CignaOneview Test Framework project, One view Test Framework need to support End to End testing.1) IntegrationTesting.2) FunctionalTesting3) UnitTesting.Project Helps to provide customized test execution and customized reporting.

Responsibilities:

- Involved in analyzing the Requirements.
- Involved in analyzing the existing code and implementing our codes in it.
- Involved in Code Review as per the Coding Standards.
- Involved in Preparing the Unit Test Cases.
- Involved in Unit Testing and Integration Testing.
- Involved in coding different types of Report Program and generating many customized[ATU Automation Testing Utilities] Reports as per the Client's requirement, on daily/ weekly/ monthly Basis & have been involved in Daily Client call for Status updates.
- Involved in maintaining different Process Documents during the Project Life Cycle.

Project #8:

Title : ESS-Synthesis.
Client : Deutsche Bank. (05-2013 to 11-2015)
Organization : CGI Bangalore.
Environment : Java, .net, Web services, Jdbc, Servlets, Sybase, PowerBuilder and Jboss.
Team Size : 3

Description:

Deutsche Bank project, ESS-Synthesis (SwapApproval project Lack of controls around swap approval process) Swap approval focuses on the workflow that the Trader, Sales and CTS follow in order to create a swap and enable it to be used for live trades. The process will be improved by enhancements made to Synthesis. The trader will approve swaps from the Synthesis application but CTS will still need to create the swap and make changes in PowerBuilder.

Responsibilities:

- Involved in development of Java, DAO classes using Core Java and JDBC.
- Developed Cache level classes using collections.
- Developed .XSD files to generate the Request response classes for request processing
- Created and modified Remote configuration xml files to interacting to .net code.
- Created dynamic query's modified store procedures using Sybase database.
- Involved in analyzing the Requirements and preparing the technical documents.

Project #9:

Title : MERCHANDIS ANALYST.
Organization : Mathan Systems Bangalore.
Environment : Java, Servlet's, jsp, Jdbc, Java Script, MySQL, Db2, Ajax and Tomcat.
Team Size : 3

Description:

ARC: Integrated Retail Business Intelligence Solutions. ARC streamlines the way retailers gather, analyze, share, and act upon business data, by providing the power to automatically and seamlessly transform operational data into business intelligence. ARC is the reporting tool for retailers to take decisions and analysis of the business.

Responsibilities:

- Involved in development of Customer Process class and servlets class.
- Developing and enhancing the customer maintenance User Interfaces using JSP.
- Involved in client side validations using JavaScript.
- Developed reusable components for database connectivity using JDBC.
- Resolved Issues, Enhancements, Modifications various Java classes, JSP's and Servlet's.
- Had done the coding for the various requests in the life cycle of the project.
- Support in functional requirements and module leading. Resolved Exceptions and Issues while execution of the application.
- Debugging and maintained of the application.
- Online connectivity Scripts preparation as per TS and supporting online connectivity between the interfaces in SIT and UAT.
- Involved in fixing the bugs raised using SalesForces-12.

Date: **Thank You.**
