Phone: 9542572865 ◇ Tirupati, Andhra Pradesh, India
Email: yachamaneniyaswanth@gmail.com ◇ LinkedIn ◇ LeetCode

OBJECTIVE

.NET Developer with over 3 years of experience in designing, developing, and implementing web applications using .NET framework. Skilled in front-end and back-end development, API integration, and troubleshooting across the software development life cycle. Proven ability to work in Agile environments and deliver solutions that meet client needs efficiently. Hands on experience on problem-solving skills and a solid understanding of software development life cycle (SDLC) principles.

EDUCATION

Integrated Master of Technology (M. Tech) in Software Engineering, VIT University 2017 - 2022
CGPA: 8.19 / 10

SKILLS

C#, JavaScript, HTML, CSS, bootstrap, .NET Framework, .NET MVC, .NET Core, jQuery, Ajax, Kendo UI, MOQ, Git, Postman, Swagger, RESTful APIs, LINQ, Microsoft SQL Server, ADO.NET, Agile, Scrum, Basics of WinForms, Data Structures & Algorithm, Problem Solving.

EXPERIENCE

Software Engineer 2 August, 2022
HCL iAutomate, HCL Technologies *Chennai, India*

- Developed and maintained web apps using .NET, JavaScript, and Kendo UI, and enhancing performance.
- Implemented Controllers, Actions, and Views in ASP.NET MVC to handle user inputs and render interfaces.
- Designed and built RESTful APIs using ASP.NET Web API and .NET Core for seamless third-party integration.
- Created reusable, modular components by applying object-oriented programming principles and implementing Dependency Injection (DI) and Inversion of Control (IoC) to improve flexibility, testability, and maintainability.
- Utilized MOQ to mock objects, ensuring high test coverage and reliability in test-driven environments.
- Designed, developed and optimized complex SQL queries, stored procedures, functions, schemas, tables, indexes, views, and triggers for data manipulation while ensuring data integrity, security, and compliance.
- Built and customized advanced Kendo UI components, including dynamic grids with server-side paging, filtering, sorting, and templating, while implementing reusable widgets, responsive layouts.
- Improved overall application performance, optimizing back-end logic, and reducing API response times.
- Collaborated with cross-functional teams in Agile/Scrum to deliver quality features within sprint deadlines.
- Integrated third-party APIs and services to extend system functionality and performance of the application.
- Implemented role-based authentication and authorization with ASP.NET Identity and JWT.
- Participated in code reviews and shared feedback to ensure best practices and maintainable standards.

PROJECTS

Sign Language Recognition August, 2021
Developed a prototype AI model using Convolutional Neural Networks (CNN) to recognize and classify text, numbers, and characters from hand gestures, enabling users to create independent gesture-based inputs.(Try it here)

PUBLICATIONS

Abstractive text summarization using deep RNN October, 2023
