Project Name: McDonald – Restaurant Management System
Client: McDonald's Corporation.
Role: Automation Engineer (Quality Analyst)
Team Size: 4 Members
Organization: Capgemini Pvt. Ltd.
Duration: June 2021 – September 2023

Description:
McDonald's Restaurant Management System is an internal application designed to streamline restaurant operations, improve service efficiency, and ensure compliance with global quality standards. The system handles order processing, menu management, employee roles, and in-store automation activities. The QA team was responsible for validating business logic, UI workflows, and integrating automated test scenarios into the CI pipeline to maintain release quality.

Responsibilities:
- Analyzed and understood user stories and requirements for each sprint.
- Identified test scenarios and prepared manual and automated test cases.
- Performed Smoke, Functional, and Regression testing throughout the sprint cycles.
- Designed and executed test scripts using Page Object Model (POM) and OpenTest framework.
- Used Jira for test case execution, defect tracking, and status reporting.
- Classified defects based on severity and priority and tracked them until closure.
- Participated in daily stand-ups, sprint planning, and client calls to ensure proper communication across QA and Dev teams.
- Maintained test documentation and contributed to continuous improvement of test processes.

Project Name: Transmission
Client: Unimoni, Abu Dhabi
Role: sAutomation Tester
Team Size: 5 Members
Role: Junior Tester

Description:
Unimoni is a remittance based application. Where the remitter can initiate a payment to the beneficiary. There are
different types of payments like swift, file and API. Each beneficiary bank has its own format to accept the payments. Upon
the type of bank, we have to convert the remitter details into beneficiary bank format and help them in initiating the payment.
Responsibilities:

- Developed file generation system for developing XLS,XLSX, CSV and ZIP files with Mustache Framework.
- Used Xml web services i.e. SOAP Services to interact with bank related API's.
- Implemented swift based money transferring feature.
- Involved in performing Unit testing using Junit, Mockito and PowerMockito.
- Integrated with SonarQube to perform scans and resolve the problems.
