With extensive experience in software development and a deep understanding of backend architecture, a commitment to delivering high-quality solutions is consistently demonstrated through the implementation of scalable microservices and enterprise-level applications. Expertise in domain-driven design, CQRS, and backend-for-frontend patterns enables the development of robust, maintainable, and efficient software solutions that align with business objectives. A strong foundation in Agile methodologies, sprint planning, and effort estimation ensures seamless collaboration within cross-functional teams while maintaining project timelines. A continuous pursuit of technical excellence is reflected in proactive involvement in vulnerability assessments, performance optimization, and cutting-edge integrations such as Docker, Kafka, and cloud-based storage solutions. Seeking a challenging role in a dynamic environment that fosters innovation, technical mastery, and leadership opportunities while contributing to business growth and operational efficiency.

AREA OF EXPERTISE

- **ASP.NET Core**
- **.NET Framework**
- **ASP.NET Web API**
- **Unit and Component Testing**
- **SQL Server Management Studio**
- **MySQL**
- **Entity Framework Core**
- **Microservice Architecture**
- **Domain-Driven Design**
- **Backend-for-Frontend (BFF)**
- **Agile Methodologies**
- **Sprint Planning**

SYNOPSIS

- A track record of delivering complex software solutions has been demonstrated by successfully designing and developing scalable backend microservices that enhance system reliability and performance.
- Comprehensive expertise in domain-driven design and CQRS has facilitated the creation of well-structured architectures that streamline data processing and business logic implementation.
- Backend-for-frontend patterns have been effectively leveraged to enhance frontend performance and responsiveness, ensuring optimal user experiences in high-demand applications.
- Agile development methodologies have been rigorously followed, contributing to efficient sprint planning, precise effort estimations, and seamless collaboration with cross-functional teams.
- Performance optimization and security assessments have been actively conducted using SonarQube and Resharper, ensuring code quality, maintainability, and system security.
- Extensive experience in database design, table structuring, and query optimization has led to the development of robust data storage solutions that improve scalability and efficiency.
- Seamless integrations with Docker, Kafka, and blob storage have been successfully implemented, enabling high-performance distributed systems with efficient communication channels.
- Critical bug fixes and production support have been provided, ensuring system stability while adhering to best coding practices and client-specific requirements.
- API development expertise has been demonstrated through detailed technical presentations that have received appreciation for clarity, structure, and innovative solutions.
- A proactive approach to technical challenges and a commitment to continuous learning have contributed to staying ahead of industry trends and adopting best practices.

EXPERIENCE

Aspire Systems, Pvt. Ltd, Chennai,Client: GreenPath

JUNE 2022 – PRESENT

Senior Engineer

- Scalable backend microservices have been designed and developed using domain-driven design principles, ensuring efficient data management and modular system architecture.
- Business complexity has been effectively handled by implementing CQRS patterns, enabling improved system responsiveness and optimized query execution.
- High-performance backend-for-frontend services have been developed to support frontend applications, ensuring data consistency and reducing unnecessary API calls.
- Development life cycle activities, including requirement gathering, analysis, design, development, testing, and deployment, have been actively contributed to, ensuring smooth project execution.
- Unit and component test cases have been meticulously created and executed, ensuring software reliability and reducing production-level issues.
- Vulnerability assessments have been conducted using SonarQube and Resharper, with optimal solutions implemented to enhance code security and performance.
- Database structures have been meticulously designed and optimized, ensuring efficient storage,

retrieval, and management of critical business data.
- Seamless integration of containerized applications has been achieved using Docker, streamlining deployment processes and enhancing system portability.
- Message queuing and asynchronous processing have been implemented using Kafka, ensuring efficient data flow and communication within distributed systems.
- Knowledge-sharing sessions and technical presentations have been delivered to teams, fostering collaborative learning and best practice adoption within the organization.

PROJECTS

GreenPath

AUGUST 2022 – PRESENT

Senior Engineer

Responsibilities & Achievements

- Designed and developed scalable backend microservices using DDD and CQRS patterns.
- Developed BFF and Microservice patterns.
- Participated in various phases of development (requirement gathering, analysis, design, development, deployment).
- Involved in sprint planning and effort estimation.
- Conducted unit and component tests and worked on critical bug fixes.
- Performed SonarQube and Resharper assessments for vulnerabilities.
- Worked on integrations like Docker, Kafka, and Blob Storage.
- Delivered API development demos and received appreciation.
- Designed and developed database tables.

TECHNICAL SKILLS

Operating System	Windows 2000/XP/7/8.1/10
Office Packages	MS Outlook/2000/9/7/10, MS Office
Programming Languages & Frameworks	ASP.NET Core,.NET Framework,ASP.NET Web API,C#
Databases	SQL Server Management Studio (SSMS),MySQL,Entity Framework Core
Development Methodologies	Agile Methodologies

CORE COMPETENCIES

- Expertise in designing and developing microservices-based architectures has been leveraged to create scalable and maintainable enterprise applications that meet evolving business needs.
- Proficiency in domain-driven design and CQRS principles has facilitated the structuring of complex business logic into manageable and efficient components.
- Strong analytical and problem-solving skills have been demonstrated by successfully identifying and resolving critical production issues within tight deadlines.
- Effective collaboration with cross-functional teams has ensured smooth project execution, aligning development efforts with business objectives.
- In-depth knowledge of database management, including SQL Server and MySQL, has enabled the creation of optimized and well-structured data storage solutions.
- Comprehensive experience in Agile methodologies, sprint planning, and effort estimation has contributed to efficient workflow management and timely project delivery.
- A meticulous approach to code quality and security has been adopted through regular assessments using SonarQube and Resharper, reducing vulnerabilities and enhancing performance.
- Experience in cloud storage integrations and containerized deployment strategies has facilitated seamless implementation of scalable, high-availability solutions.
- Continuous learning and adaptability to new technologies have been prioritized, ensuring alignment with industry advancements and innovative solution development.
- A commitment to knowledge sharing and mentorship has been demonstrated by conducting technical presentations and providing guidance to team members, enhancing overall productivity and skill development.
