BARKHA KUMARI **Mobile**: +91-8971532141

Senior QA Engineer **Email**: barkhakumaricbsa@gmail.com

LinkedIn Profile

➢ PROFESSIONAL SUMMARY

- **Senior QA Engineer with 8+ years** of work experience in **Manual and Automation Testing** across **Healthcare and E-Commerce** domains**.**
- Specialized in leading QA teams, developing scalable testing strategies, and ensuring <3% defect leakage in UAT/Production.
- Skilled in **Selenium WebDriver with Java, Cucumber BDD, TestNG, Jenkins,GIT.Maven,Postman,agile,** and building robust automation frameworks.
- Passionate about improving product quality, reducing time-to-market, and enhancing customer satisfaction.

➢ KEY SKILLS

Selenium Web Driver, BDD Cucumber, TestNG, JUnit, Maven, Postman, JMeter, Java, Jenkins, Git, JIRA, Zephyr, Agile/Scrum, API Testing, Performance Testing, Mobile Testing, Database Testing, MySQL, Security Testing, Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, User Acceptance Testing, Rest assured

➢ PROFESSIONAL EXPERIENCE

1. **Baxter Innovations & Business Solutions Pvt. Ltd.** Software Engineer II (March 2024 to Present)
2. **Tech Mahindra Limited:** Senior Software Engineer (January 2022 to March 2024)
3. **Opteamix India Business Solutions Pvt. Ltd.** QA Engineer (August 2020 - January 2022)
4. **Source One Management Services Pvt. Ltd.** Software Engineer (March 2019 - February 2020)
5. **Nigus Systems Pvt. Ltd.** QA Engineer (July 2017 - February 2019)

➢ EDUCATION

Bachelor of Engineering in Computer Technology | RTM Nagpur University | August 2016 | 64.13%

➢ PROJECT HANDLED

1. Project Name: Smart Bed and Vital Sign Monitor Testing
Company Name: Baxter Innovations & Business Solutions Pvt. Ltd.
Team Size: 10
Role: Software Engineer II
Platforms: Centrella Smart Bed Platform & Vital Signs Monitors
Device Classification: FDA-regulated Class II Medical Devices
Tools: JIRA
Process Type: Agile Scrum Process

Description:
Led comprehensive verification and validation (V&V) activities for interconnected smart hospital beds and patient monitoring systems, ensuring regulatory compliance, functional safety, and system interoperability for clinical deployment. The testing was conducted under a risk-based approach, aligned with FDA and international standards (IEC 62304, IEC 60601, IEC 62366, ISO 13485).

Features of project:

1. Medical device that identify the infection in any human body.
2. It is used in airports and in public places to prevent the infections.
3. Ensure reliable test results to make the critical decisions faster.

Responsibilities:

- Performed manual and automated testing of smart bed features.
- Bed exit alerts, head/foot articulation angle sensors
- Brake status alarms and nurse call system integration
- Validated interoperability and communication protocols between beds and hospital IT systems via HL7, RS232, and wireless interfaces.
- Tested vital sign monitoring parameters (ECG, SPO_2, NIBP, temperature, respiratory rate) using patient simulators such as BedSim and Vitals Sim.
- Conducted alarm functionality and latency testing to verify performance against IEC 60601-1-8 requirements.
- Ensured traceability from software requirements to test cases in accordance with IEC 62304 standards for medical device software lifecycle.
- Developed and maintained V&V documentation, including:
- Test plans, test protocols, execution reports
- Requirements traceability matrices (RTMs)
- Supported regulatory documentation aligned with FDA 21 CFR Part 820 and ISO 13485 quality management system standards.
- Participated in usability testing and human factors validation per IEC 62366, focusing on alarm visibility, interface layout, and clinical workflow alignment.
- Leading a team of 10 members to mentor them for resolving their day to day issues.

1. **2. Project: SiteForge**

   Company: Tech Mahindra India Pvt. Ltd.

   Client: Nokia (Bangalore)

   Team Size: 20

   Role: QA Engineer

   Process Type: Agile Scrum Process

Description:

SiteForge is a provider of Network Lifecycle Management Solutions. It offers workflow orchestration and automation for site and project management, issue and configuration management, dashboard framework, collaboration, and more. The company's solutions are used in the cases of site compliance, commissioning, survey, and audit. It manages end-to-end processes involved in achieving a

Responsibilities:

- Reviewed user stories and acceptance criteria for Decathlon's e-commerce modules (product search, cart, payments, user accounts).
- Test Planning & Design: Prepared detailed test scenarios, test cases, and traceability matrices for functional, regression, and integration testing.
- Manual Testing: Executed functional, UI, and cross-browser testing to ensure smooth user experience.
- Automation: Developed and maintained automated test scripts using Selenium WebDriver / TestNG / Cucumber (or your actual stack). Improved regression suite coverage for critical shopping flows (add-to-cart, checkout, payment).

- Defect Management: Logged, tracked, and prioritized defects in JIRA, collaborated closely with developers and product owners.
- CI/CD Integration: Configured test suites in Jenkins/GitLab CI to enable continuous testing in the pipeline.
- Collaboration: Participated in daily stand-ups, sprint planning, and retrospectives following Agile/Scrum methodology.
- Quality Metrics & Reporting: Shared daily/weekly QA status, defect trends, and automation coverage reports with stakeholders

3. . Project: SmartInsights

Client: PT Smartfren Telecom Tbk (Jakarta, Indonesia)

Team Size: 15

Role: QA Engineer

Process Type: Agile Scrum Process

Description:

It is a web-based application which is designed and developed to manage network devices from different vendors. It helps to manage and maintain the customers and generates the daily and weekly performance reports with all the data set of health and performance KPI's of the devices. If any device is down due to some fault it generates an alarm. Users can create a ticket for any issue on the device. There is a topology by using it, the user can view the location of devices in the map and canvas view. The aim of the project is to monitor the devices.

Responsibilities:

- Understanding the complicated requirements and features of the applications.
- Excellent in performing regression, smoke, random, unit test, retest, sanity, globalization, exploratory and functional testing.
- Reporting bugs while performing different types of testing in the modules like calendar, plans and policy, member data, client portal, employer client, service plans and OE landing page of applications.
- Familiar with all phases of Software Development Life Cycle and Software Test Life Cycle.
- Coordinating with development team to follow up on defects.
- Writing and executing test automation scripts using BDD Framework.

4. Project Name: Sony Bravia
Company Name: Source One Management Services Pvt. Ltd.
Role**: Software Engineer**
Tools: JIRA
Team Size: 12

Description:
Sony Bravia is a brand of Sony visual products, a wholly owned subsidiary of Sony group corporation and used for its television products. This impressive TV delivers in scramble picture quality in any viewing environment to its LED panel technology.

Responsibilities:

- Gained comprehensive understanding of device functionality and application features to effectively test software performance.
- Conducted Smoke, Sanity, Regression, Functional, Re-Testing, and Ad-hoc Testing to ensure optimal software quality.
- Created detailed test scenarios, test cases, and test data based on Functional Requirement Specifications

(FRS) documents.

- Collaborated in testing software packages for Digital TV (DTV), ensuring robust functionality and performance.
- Actively participated in the creation of test scenarios and test cases based on the FRS documentation.
- Identified and reported defects by raising tickets in JIRA, tracking issues to resolution.
- Engaged in team meetings and scrum calls, contributing to collaborative discussions and progress tracking.
- Developed and executed stability testing scripts using the AKIRA tool to assess software reliability.
- Tested key TV features, including screen mirroring, media casting, and media playback, to ensure seamless user experience.
- Tested and validated Over-The-Top (OTT) applications, Airplay, Google Duo, Android settings, and related features.
- Contributed to the APK release process, ensuring smooth deployment and functionality of new releases.
- Played a key role in creating and reviewing Test Design Documents for thorough testing procedures.
- Tested a variety of TV settings and functionalities, such as picture and sound settings, DMP and DLNA server content playback, Amazon and Netflix video streaming, Factory Data Reset, subtitles, Wi-Fi (wireless and wired LAN), Bluetooth, media content playback, LARC, and Google Cast.

5. Project Name: Portstay

Company Name: Nigus Systems Pvt. Ltd.

Team Size: 5

Role: QA

Tools: JIRA

Description:

This project is to automate the various activities of the social world through Internet. Online Account Creation for users, organizations and hotels *Providing chat services with hotels and organizations, Table booking for restaurants Online bill payment services. Online food ordering, Ticket Generating from user side, Carpool Booking, IT-Helpdesk Online Market Place, Chat process etc.

Responsibilities:

- Understanding business requirement document and identifying scenarios.
- Performed different levels of testing (functional, integration, system and user acceptance testing).
- Expertise in bug reporting and tracking defects, using bug tracking tool JIRA.
- Maintained the testing evidence for each test cases as proof of validation.
- Prepared Test Summary/STCM report.

`
