Ramesh Thanikonda
SQL, Informatica developer
Rameshinformatica407@gmail.com
9390252431

TECHNICAL SUMMARY:

ETL Tool
Informatica 10.1/9.6/8.6, Control M, WLM, Unix

Databases
Oracle, Teradata utilities, Unix Data Warehousing concepts.

Programming:
SQL, Oracle, UNIX Shell Scripting
performance tuning in the database as well as mapping.

Scheduling Tools
TES WLM, Control M Tool.ESP, Winscp.

Testing/Other Tools

Environment
Windows XP2007/Vista,

PROFESSIONAL SUMMARY:

- Having 6.5+ years of experience in the IT Industry with core competency in Data Warehousing (DW), Extract-Transform-Load (ETL) development with Informatica, and Business Intelligence.
- Deep understanding of technology with a focus on delivering business solutions.
- Having good knowledge of Control-M and Workload Manager (WLM) scheduling tools
- Skilled Team player with proven ability to lead and motivate teams to maximize productivity
- Ability to build new territories and expand opportunities towards the achievement of stated targets
- Comprehensive problem-solving abilities, excellent decision-making skills with a positive approach.
- Proven analytical skills suitable for process design and data analysis
- Excellent decision-making skills with a positive approach
- Dedicated and highly ambitious to achieve personal as well as organizational goals.
- Creative, self-motivated, punctual with good communication and interpersonal skills.
- Good understanding of Data Warehousing and dimensional modeling
- Ability to understand the business needs and design Informatica Mappings
- Knowledge of Mapplets and Worklets
- Ability to write complex SQL queries
- Good knowledge of UNIX commands
- Knowledge of performance tuning in Informatica and SQL
- Capable of XML import and exporting of Informatica workflows

PROFESSIONAL EXPERIENCE

Citius Tech from Jun-2023 to tilldate.

CBSI India Pvt Ltd from Mar-2022 to Jun-2023.

Tata Consultancy Services from Jun-2019 to Mar-2022.

Cigna Corporate Warehouse (CCW)

Healthcare
Cigna, a global health insurance service company offers health, dental, supplemental insurance and Medicare plans to individuals, families, and business organizations.

Responsibilities

- Monitoring the various claims batches (Medical/Pharmacy/Vision claim/Rejected Claims /Paid Claims and so on.
- Designing the technical design specifications and program specification documents for ETL jobs
- Developing the Informatica Mappings, sessions, and workflows required to load the data into oracle application from flat files and staging tables
- Writing the test cases for unit and integration testing
- Expertise in the unit test, integration test of Informatica components
- Perform data validation tasks after data load and identify the data mismatches
- Interacting with developers and explaining the mapping rules from legacy to bridges application
- Analyzing the problems and providing optimum solutions to customers.
- Creating source to target mappings and developing the ETL mappings using Informatica Power center
- Expertise in tuning the mappings and sessions to optimize the performance
- Monitor the critical business views to refresh daily
- Resolving the P1/P2/P3 tickets or Abends with the SLA.
- Notify the respective team in case of any data-related/performance-related/File related issue by raising the ticket based on criticality or priority.
- Decide the Application name/Application code as per the naming standards or existing followings.
- Moving the new code into the production environment via WLD files as a part of release activity.
- Monitoring the system health /heartbeat and notify the delivery team In case of blocker alert/Using more spool space/using 1 complete amp.
- Resolve Business /Customer Queries.
- Handling Daily status call/Weekly status calls to provide the status of various activities to the client
- Creating the job inventory for the New /Modified process, also creating the KEDB for issues for future reference.
- Creating the IM/PM/RM/CM based on requirements.
- Data Transformation & Modeling: Proficient in using DBT to design, build, and maintain scalable SQL-based data transformation models.
- Experience with ELT workflows, using DBT to transform raw data in data warehouses (e.g., Snowflake, BigQuery, Redshift) into structured formats for analysis.
- Strong skills in writing complex SQL queries for data transformation, aggregation, and cleaning in DBT.

- Proficient with Git for version control and collaborative management of DBT models and transformations.
- Skilled in writing and automating tests in DBT to ensure data integrity, quality, and accuracy (e.g., uniqueness, non-null constraints, data type validation).
- Ability to generate and maintain automated, self-updating documentation for DBT data models, ensuring transparency and ease of understanding for stakeholders.
- Familiar with cloud platforms like Snowflake, Google BigQuery, and AWS Redshift for running DBT models.
- Experience in scheduling and automating DBT jobs using Airflow, dbt Cloud, or other orchestration tools for data pipeline automation.
- Knowledge of implementing governance practices through DBT, such as ensuring data quality and maintaining an audit trail of changes in data models.

Tools: Informatica Power Center 10.0, ESP ((CA workstation), GitHub, GitLab, Bitbucket, Airflow, Prefect, dbt Cloud's native scheduler, Snowflake, BigQuery, Redshift, DBT Artifacts, dbt-snowflake, dbt-utils, dbt-audit-helper, DBT Snapshots,Teradata Utilities, Viewpoint, HPSM Ticketing Tool, Easy Planner, WinSCP.

Medica
DX Application:
Data Exchange is one of the major downstream applications of Anthem Enterprise DWH and Research Depot (Edward) that extracts and transforms data based on business requirements and these extracts are sent both to internal and external business users.

Our upstream/Source system is Edward, RHI & Business, user/vendor. Basically, we will receive 90% of the data from Edward. We have around 293 Extracts in production for DX.

Basically, we will monitor all productions jobs through this, actual production jobs will run on three different servers namely GBD (va10puvhiir002) and non-GBD (vathmrr377, 357, and va10pupinf001).

Responsibilities:
- Monitor the production jobs/Ad-hoc jobs and make sure to run all jobs as per schedule.
- Responsible for all Day-to-day activities to make sure that the DX system is ONLINE.
- Routing the incident to corresponding teams and closing the incident with proper RCA.
- Creating DIM to corresponding teams for any impact analysis and if any issue needs to fix permanently.
- Tracking the Extraction status with iteration count/start/end times for special/ad-hoc runs and updating in Daily status report (DSR) and sending the Daily status report to the client on daily basis.
- Maintaining reports (Ad-hoc, APCD tracker, Critical extract tracker, Tableau report, DIM/RIM status report, DSR, etc.) in share point location.
- Attending Production handover meetings which are conducted by DEV/LO teams and updating the handover information of each extract indeed.

- Developing the Informatica Mappings, sessions, and workflows required to load the data into oracle application from flat files and staging tables
- Writing the test cases for unit and integration testing
- Expertise in the unit test, integration test of Informatica components
- Perform data validation tasks after data load and identify the data mismatches
- Interacting with developers and explaining the mapping rules from legacy to bridges application
- If any critical extract failures, then initiate a SWAT call to the concerned team and make sure to resolve that issue and share the SWAT information with the client.
- Tracking recurring failures (Broken pipe issues, Binary packet issues, struck workflows, etc..) and following up with the concerned team for a permanent fix.
- For Edward release/Maintenance/outages/ARC will create DIM to LO team to share impacted extracts based on that list, prepare impacted extract tracker and notify to business.
- clearing stale instances on regular basis.
- Creating tickets in SNOW for Control M - Prod migrations, Fixing the existing issues to improve the system performance, Operations requests, FTP research information, Request tickets to add/remove contacts to bridge notifications, and Change tickets for files restored from tapes, etc.

Environment: Informatica 10.1, 9.6, Teradata, Snowflake, PostgreSQL, Control M, WLM, Shell script, & Flat files.

Anthem
DX Application:
