HARSHITHA SANAKKAYALA

Harshitha8438@gmail.com 9642545965 Bangalore

CAREER OBJECTIVE

To obtain a challenging position as a Data Engineer in a growth-oriented organization where I can utilize my skills in Big Data, Cloud Platforms, and ETL development to contribute to data-driven decision-making and business insights.

PROFILE SUMMARY

- • **5.4 years** of experience in **Big Data** and **Data Engineering** using **PySpark**, **Hive**, **SQL**, and **Cloud** technologies.
- • Proficient in building scalable data pipelines using **AWS** services like **Glue**, **Redshift**, **Lambda**, and **S3**.
- • Strong experience in **Azure** services including **Synapse** Analytics and **Databricks** for data transformation.
- • Expertise in writing complex **SQL**, **Python** scripts, and handling large datasets in distributed systems.
- • Experience in developing **ETL** workflows using **PySpark** and automating jobs for scheduled execution.
- • Skilled in creating reusable components and modular code for pipeline development.
- • Hands-on in **Spark** job tuning, partitioning strategies, and performance optimization.
- • Experience with version control tools like **GitHub** and **Bitbucket** in **Agile** environments.
- • Worked across domains including **Banking**, **Insurance**, and **E-Commerce**.
- • Strong understanding of data warehousing concepts and cloud-based **DWH** (**Redshift**, **Synapse**).
- • Built data quality checks and reconciliation frameworks in regulated environments.
- • Collaborated with cross-functional teams for requirement gathering and analytics delivery.
- • Designed and implemented **error handling, retry logic**, and logging frameworks in pipelines.
- • Automated ingestion from heterogeneous sources including **RDBMS** and flat files.
- • Delivered performance-optimized queries using best practices and indexing.
- • Experience working in **CI/CD** environments using **Jenkins**/**Git**-based pipelines.
- • Excellent team player with a proactive approach and strong communication skills.

EDUCATION

B.Com **(Commerce**) Sri Venkateshwara University College, **2017 – 2020**

PROFESSIONAL EXPERIENCE

Grayradiant data services, Bangalore Data Engineer | June 2020 – September 2025

PROJECTS

Project 1: Wealth Management System

Client: Starling Bank

Duration: May 2022 – Sep 2025

Environment: PySpark, SQL, Python, AWS S3, Glue, Lambda, Redshift

Team Size: 6

📌 Description: Developed an end-to-end data lake architecture for the wealth management division to manage customer investments, transactions, and portfolio insights. Focused on integrating diverse financial sources into Redshift for reporting and compliance.

📌 Roles & Responsibilities:

- • Designed and developed ETL pipelines in PySpark for ingesting and transforming investment data.
- • Built AWS Glue jobs for batch data transformation and loaded curated data into Redshift.
- • Implemented SCD Type 1 and Type 2 logic for maintaining investment records.
- • Used Lambda to trigger Glue jobs based on S3 file arrivals (event-driven processing).
- • Developed reusable modules for data validation and transformation.
- • Integrated financial feeds from various partners using Python scripts and APIs.
- • Tuned Spark jobs using broadcast joins, repartitioning, and caching techniques.
- • Ensured secure data access using IAM roles and encrypted S3 buckets.
- • Maintained version-controlled code using GitHub; followed Agile processes.
- • Coordinated with data scientists to enable portfolio performance reporting.
- • Created monitoring dashboards using CloudWatch and Glue job logs.
- • Conducted peer reviews and implemented unit testing for critical modules.

🌓 Project 2: Claims Processing System

Client: Centaur Insurance

Duration: June 2021 – April 2022

Environment: SQL, Python, Hadoop, Scala, Azure Synapse, Databricks

Team Size: 9

📌 Description: Developed a claims processing engine to automate the ingestion, validation, and enrichment of insurance claim data using Azure and Big Data tools for real-time claim status and fraud analytics.

📌 Roles & Responsibilities:

- • Built PySpark jobs on Azure Databricks to process claims files from ADLS.
- • Implemented claim lifecycle tracking and data enrichment logic using Scala.
- • Ingested legacy data using Sqoop from Oracle to Hadoop HDFS.
- • Performed complex joins and aggregations in Spark SQL for insights generation.
- • Developed logic to flag suspicious claims based on patterns and thresholds.
- • Orchestrated workflows using Azure Data Factory pipelines.
- • Loaded structured data into Azure Synapse Analytics for BI consumption.
- • Applied performance tuning for long-running Spark jobs.
- • Ensured data consistency across daily loads using audit and reconciliation logic.
- • Created parameterized notebooks in Databricks for dynamic data loads.
- • Documented job architecture and transformation logic for audit trails.

🛒 Project 3: Product Management System

Client: ShopSphere

Duration: June 2020 – May 2021

Environment: SQL, Python, Linux, Unix, PowerShell, PL/SQL

Team Size: 12

📌 Description: Built an internal data system to manage and categorize products across global storefronts, including pricing strategy, stock updates, and vendor product matching using SQL and Unix- based scripting.

📌 Roles & Responsibilities:

- • Created shell and Python scripts for automated product catalog updates.
- • Developed PL/SQL procedures to handle inventory reconciliation and price changes.
- • Extracted and transformed vendor data feeds using batch scripts.
- • Implemented control tables for load tracking and reprocessing logic.
- • Scheduled jobs using Linux cron and integrated logging for monitoring.
- • Developed SQL logic to track product performance across regions.
- • Created detailed product matching logic for duplicate detection.
- • Automated failure alerting and notification emails using PowerShell.
- • Worked with business teams to define product metadata standards.
- • Maintained version control using Bitbucket.
- • Participated in sprint planning, reviews, and retrospectives.
- • Contributed to test case creation and QA testing.
- • Optimized product grouping queries to improve job performance.

TECHNICAL SKILLS

Category	Skills
Programming	**Python, Scala, SQL, PL/SQL**
Big Data	**Spark, PySpark, Hive, Sqoop, Hadoop**
Cloud Platforms	**AWS (S3, Glue, Lambda, Redshift), Azure (Synapse, Data Factory, Databricks)**
Databases	**Oracle, MySQL, Hive**
Operating Systems	**Windows, Linux, Unix**
Version Control	**GitHub, Bitbucket**
IDEs/Tools	**Eclipse, PyCharm**
Scripting	**Shell Scripting, PowerShell**
