Anuja A Bharamgonda

DataEngineer | DataPipelines | AWS | ETL Solutions | Machine Learning

+917066755657 @anujabharmgonda@gmail.com

Professional Summary

DataEngineer with **5+years** ofexperience at **LTIMindtree,Bengaluru (2020-Present)**specializing in building scalable data pipelines and data solutions using AWS, Python, PySpark, and Databricks. Skilled in API development (Flask, FastAPI, Django), data migration, validation, and modeling. Proficient in SQL, ETL processes, and working with tools like Jira, Jenkins, and pytest. Strongproblem-solvingskills with a focus on clean, efficient, and collaborative development.

Experience

DataEngineer-Wallenius Wilhelmsen ,United Kingdom

2024 - Present

- Tech Stack: **AWS (S3, Lambda, Glue, Redshift, RDS,Kinesis,SNS), Azure (Blob Storage, Logic Apps, Data Factory), Couchbase, ETL, Machine Learning**
- Designed and deployed ETL pipelines to extract, clean, and load customer data into AWS S3 for shipping and logistics optimization.
- Automated email data retrieval and processing workflows using AWS Lambda, enhancing operational efficiency.
- Built logic to identify and route customer-specific data using metadata, ensuring accurate mapping into Couchbase NoSQL storage.
- Processed and structured high-volume, unstructured data into standardized customer profiles and planning models.
- Integrated AWS and Azure services for seamless data orchestration across hybrid cloud environments.
- Improved voyage time prediction and transportation planning accuracy through advanced data preprocessing and ML ready datasets.

Data Engineer-State Farm, United States

September 2022 - December 2023

- Tech Stack: **AWS S3, Glue, Kinesis,SNS,Python, Parquet, ETL, Fuzzy Matching, Cosine Similarity**
- Developed ETL workflows to ingest chunk ACA data into AWS S3 for UHC reporting.
- Used AWS Glue to compute Data Quality Index (DQI) scores, enabling early detection of data issues.
- Normalized broker details (names, emails, zip codes) using Python for consistency and compliance.
- Applied fuzzy matching and cosine similarity to identify duplicate entries and improve validation accuracy.
- Exported clean data in Parquet format for storage in S3 and a test database used by analysts.
- Enhanced data accuracy and reporting reliability, supporting IRS compliance and smoother analyst collaboration.

Software Engineer-Angel Television Private Limited, United States

July 2020 - August 2022

- Tech Stack: **Python, MySQL, Firebase, Power BI, SQL, JSON, API Integration**
- Developed ETL pipelines to extract and integrate data from Firebase APIs and MySQL, automating updates for Power BI dashboards.
- Designed a centralized data model to unify user and partner datasets, optimizing large-scale MySQL queries for performance.
- Enabled advanced Power BI visualizations by transforming and aggregating high-volume streaming data.
- Created Python-based anomaly detection scripts to flag inconsistencies in watch-time metrics and unauthorized app usage.
- Collaborated with the analytics team to improve ETL efficiency and support real-time data availability.
- Delivered a scalable solution that boosted user engagement by 12–15%, cut 20 hours of manual work weekly, and uncovered a key security flaw.

Skills

- Python
- SQL
- ETL
- Databricks
- Pyspark
- NoSQL
- Data Mining
- Cloud computing
- Data Analysis
- AWS
- Azure
- Big data

Education

ShivajiUniversity of Walchand College of Engineering Sangli

Master inElectronics

- Graduated: August 2017

Solapur University of Walchand Institute of Technology Solapur

Bachelors in EXTC

- Graduated: August 2014

Language

- English
- Hindi
- Marathi

Hobbies

- Swimming
- Drawing
- Dancing
