balajikasturi20@gmailc.om

Summary

- 6.0 years of total IT experience.
- 5.0 years of experience as Data Engineer
- Expertise on implementing Big Data Technologies like Hadoop, HDFS, Map Reduce, Hive, Oozie, Python, Scala, SQL ,spark and AWS s3,Glue,Athena, snowflake and redshift

Professional Experience

- Working as senior data engineer in HCLTech at Bangalore from August 2024to till date
- Worked as data engineer in Incedo Technology Solutions limited at Bangalore from July 2022 to July 2024.

- Worked as Senior Software Engineer in RRDONNELL**Y** at Chennai from September 2021 to May 2022
- Worked as software Engineer with city bank **&** Oasis healthcare through alchemy tech solutions at Bangalore from December 2020 to July2021

Academic Summary

- Msc in Sri Venkateswara university at Tirupati with 67%
- BSc with MPC in Sri Sai degree college in Railway Kodur in Tirupathi with 60%
- Intermediate with MPC in Sri Venkateswara college in Railway Kodur in Tirupathi with 60%
- SSC in ZPH High school in Railway Kodur in Tirupathi with 61%

Technical skills

Data Eco System:	Apache Hadoop, Apache hive, map reduce, Apache Spark, HDFS ans scala
Cloud Skill	AWS,S3, Athena and glue

Databases	Oracle, my SQL
Languages	Python,Pyspark and SQL and scala
IDE and Build Tools	PyCharm, JIRA, data bricks and GIT

Project -5

Company Name	HCL Tech
Client	CBA
Role	Data engineer
location	Bangalore
Duration	2024 OCT to Till date

Project Description

Roles and responsibilities

Migration and **responsibilities**

- Worked as a Data Engineer and contributed for successful migration of 60k+ on-premise Spark and Scala ETL jobs to AWS cloud.
- Performed bundle analysis in terms of identifying associated streams, source and target datasets, framework type, business units of data pipeline jobs.
- Tested over 300+ ETL jobs in AWS preprod environment that includes ingestions, transformations and export jobs and performed data quality and runtime performance validations.
- Performed log analysis and understanding the Errors, Exceptions causing job failures during preprod testing and worked with technical leads in fixing the bugs and retesting the jobs.
- Worked with Data owners to analyze code and provide technical justification for possible data checksum scenarios during data validation between on-premise and AWS preprod environment datasets post job testing.
- Scheduled jobs using autosys

Deployment and responsibilities

- Designed, developed, and maintained scalable ETL pipelines using AWS Glue and PySpark, integrating various structured and unstructured data sources.
- Built reusable ETL jobs leveraging Python and AWS Glue to process, cleanse, and transform large datasets in a distributed environment.
- Utilized Amazon S3 for storing raw, processed, and curated datasets following best practices for data lake architecture and performance optimization.
- Developed complex SQL queries for data transformation, validation, and loading into downstream systems including Amazon Redshift.
- Automated end-to-end ETL workflows using AWS Glue Workflows, Glue Triggers, and AWS Step Functions, ensuring seamless data pipeline orchestration.

- Ingested and indexed structured and semi-structured data into Amazon OpenSearch Service, enabling fast, scalable, and secure search and analytics capabilities.
- Secured sensitive credentials and connection strings using AWS Secrets Manager, integrating secrets dynamically within Glue Jobs, Lambdas, and other pipeline components.
- Implemented data access and security policies using IAM roles, S3 bucket policies, and Redshift user permissions to meet compliance and governance requirements.
- Monitored ETL performance and health using Amazon CloudWatch, identifying failures, latency issues, and setting up automated alerts via SNS for proactive resolution.
- Enabled schema discovery and data cataloging using Glue Crawlers, maintaining an up-to-date metadata catalog integrated with Redshift Spectrum.

Project -4

Company Name	Incedo
Client	PNC Bank (Advisor portal application)
Role	Data engineer
location	Bangalore
Duration	2023 July to July 2024

Project Description

PNC BANK is one of the largest diversified financial services in United States offering a wide range of banking services, lending, investment and wealth management services to individuals, businesses and PNC bank providers investment management, retirement planning, trust and estate services.

Technical skills

Data Eco System:	Apache Hadoop, Apache hive, map reduce, Apache Spark, HDFS ans scala
Cloud Skill	AWS,S3, Athena and glue snowflake
Databases	Oracle, my SQL
Languages	Python,Pyspark and SQL and scala
IDE and Build Tools	PyCharm, JIRA, data bricks

Roles and responsibilities

- Worked with Hadoop, Hive, Python, Spark, and Oozie.
- Managed historical data in Parquet format across multiple tables in Hive for the bank.
- Combined multiple tables, applied business logic, and consolidated the data into a single table in Hive.
- Loaded the processed data into Hive.
- Transferred data from Hive to the target Oracle database on business requirement.
- Scheduled jobs using Oozie.

Project 3

Company Name	RR Donnelley

Client	Molina health care
Role	Data engineer
location	Bangalore
Duration	2022, Sep to 2023 May

Project Description

Molina Healthcare is a managed care company headquartered in Long Beach, California, United States. The company provides health insurance to individuals through government programs.

Roles and responsibilities

- Ingested raw banking data (CSV, JSON, Parquet) into Amazon S3 with secure, partitioned storage.
- Developed modular PySpark ETL jobs in AWS Glue for cleansing, deduplication, and schema evolution.
- Configured Glue C
- Enabled ad-hoc querying and validation of processed datasets using Amazon Athena over Glue Catalog.
- Tuned Athena queries for performance using optimized Parquet formats and partitioning strategies.
- Exported curated datasets to Snowflake using Snowflake Spark Connector and Snowpipe for real-time ingestion.
- Designed Snowflake schemas with clustering keys for efficient querying and dashboarding.

Project 2

Company Name	Alchemy Tech sol
Client	Oasis healthcare
Role	Data engineer
location	Bangalore
Duration	2021 July to 2022 June

Project Description

Oasis healthcare patient support services it offers patient support services to assist with scheduling appointments, processing insurance, processing insurance claims and addressing and also providing flexible payments options.

Roles and responsibilities

- Experienced in importing and exporting large datasets between Hadoop and relational databases using Sqoop.
- Using Sqoop, we can export data from MySQL to HDFS
- Apply transformation logic based on business requirements using PySpark and optimize the code for performance.
- Create SQL queries based on PySpark code in Hive and manage Oozie jobs in both UAT and development environments
- Finally, load the data into the target location in HDFS based on business requirements.

Technologies: Hadoop, python HDFS, Hive, pyspark

Project: **City Bank**

Project Name	Alchemy Tech sol
Client	City Bank
Role	Software engineer
location	Bangalore
Duration	2020 Dec to 2021 July

Project Description

City bank officially known as Citibank is global banking and financial services headquartered in new York city risk management and compliance to maintain the safety operations and to comply with regulatory requirements.

Roles and responsibilities

- Data collection, data processing or data cleaning
- Hands-on experience in Python, NumPy, SciPy, Matplotlib, Pandas.
- Hands-on experience Model building that can be used for prediction
- Hands-on experience Creating visualization.
- EDA, insight generation and data preparation.
- Explore and visualize data to gain insights.
- Hands-on experience Data gathering and Data cleaning.
- To train and re-train ML systems and models as and when necessary.
- Hands-on experience Data Preparation technics using Missing value treatment and Outlier detection.
- Hands-on experience applying different model validation technics using Confusion matrix and classification matrix.

Technologies: Python and SQL
