SUNIL KUMAR MS

sunilkumarhsn1999@gmail.com | +91 99860 10689 | Bengaluru, IN

CAREER OBJECTIVE

Result Oriented Data Analyst with 4+ years of experience in banking, financial services, and supply chain analytics. Skilled in Python, SQL, PySpark, Flask, AWS, Snowflake, and BI tools to design, develop, and optimize scalable ETL pipelines, cloud-based data platforms, and interactive reporting systems. Adept at collaborating with cross-functional teams to deliver actionable insights, automate workflows, and enable data-driven decision-making for business growth and operational efficiency.

PROFESSIONAL EXPERIENCE

- **SQL & Databases** – Expertise in writing optimized queries, views, and stored procedures in PostgreSQL, MySQL, Redshift, and Snowflake.
- **Data Visualization** – Designed interactive dashboards and KPI reports using Power BI, Tableau, and Excel for business, financial, and supply chain stakeholders.
- **Python & Analytics** – Developed automation scripts, forecasting models, anomaly detection, and ad-hoc reporting using Pandas, NumPy, and Scikit-learn.
- **Business Reporting** – Delivered regulatory, compliance, and financial reports with 100% accuracy, supporting risk and audit functions.
- **Data Wrangling** – Strong experience in data cleansing, transformation, and feature engineering for accurate reporting and insights.
- **Stakeholder Collaboration** – Partnered with finance, compliance, and supply chain teams to define KPIs, improve planning accuracy, and enable self-service analytics.
- **Performance Optimization** – Improved reporting and dashboard refresh times by tuning queries, implementing data models, and optimizing workflows.
- **Business Impact** – Consistently delivered insights that improved decision-making, reduced risks, optimized inventory, and enhanced reporting efficiency.

WORK EXPERIENCE

- **Data Analyst || Ujjivan Small Finance Bank ||** Oct 2023 - Present
- **Data Analyst || More Retail ||** Aug 2021 - Oct 2023

TECHNICAL SKILLS

- **Programming & Tools:** Python, SQL, Flask, Git, GitHub, Bitbucket, JIRA
- **Databases & Warehouses:** PostgreSQL, MySQL, Snowflake, AWS Redshift, MongoDB (basic)
- **Python Libraries:** Pandas, NumPy, PySpark, Matplotlib, Seaborn, Statsmodels, Pytest/Unit Test

- **Big Data & Cloud:** Databricks, Hive, Apache Airflow, AWS Glue, AWS S3, AWS EMR, AWS Lambda
- **Data Visualization:** Power BI, Tableau, Excel, Grafana, Splunk
- **Development Environments:** Jupyter Notebook, PyCharm, Visual Studio Code
- **Operating Systems:** Windows, Linux

KEY PROJECTS

PROJECT 2: Financial Compliance & Risk Analytics Platform

Role: Data Analyst

Domain: Banking & Financial Services

Tools: SQL, Python (Pandas, NumPy), Power BI, Tableau, Snowflake, Redshift, PySpark, AWS Glue, Airflow, Excel, Scikit-learn (Anomaly Detection), Git, JIRA

Description:

Developed a centralized financial compliance and risk analytics platform to monitor regulatory reporting, fraud detection, and executive decision-making. The solution automated data ingestion and reporting workflows, enabled real-time anomaly detection, and delivered self-service dashboards for business stakeholders, ensuring audit-readiness and regulatory compliance.

Roles & Responsibilities:

- Designed and delivered regulatory and compliance reports using SQL, Python, Power BI, and Excel.
- Built interactive dashboards for fraud monitoring, risk analysis, and executive insights using Power BI & Tableau.
- Automated data preparation and reporting workflows with SQL, PySpark, and Airflow, reducing manual effort by 40%.
- Migrated and modeled datasets in Snowflake and Redshift, improving query performance and data accessibility.
- Implemented KPI dashboards and anomaly detection models (Scikit-learn) for early fraud and compliance alerts.
- Ensured GDPR and financial governance compliance by implementing secure data access controls.
- Collaborated with business, risk, and compliance teams to define KPIs, translate requirements, and enable self-service analytics.

PROJECT 1: Supply Chain Analytics & Optimization System

Role: Data Analyst

Domain: Supply Chain & Enterprise Computing

Tools: SQL, Python (Pandas, NumPy, Scikit-learn), Power BI, Tableau, Excel, AWS Redshift, AWS S3, GitHub, JIRA

Description:

Developed a supply chain analytics and reporting platform to improve demand forecasting, vendor performance monitoring, and inventory management. The solution enabled real-time tracking of order fulfillment, reduced backorders, and improved stock planning accuracy by integrating data from multiple warehouse and vendor systems into a centralized reporting framework.

Roles & Responsibilities:

- Developed demand forecasting models in Python using Pandas, NumPy, and Scikit-learn, enhancing stock planning accuracy and reducing overstocking.
- Designed Power BI dashboards for vendor SLA adherence, order fulfillment, inventory turnover, and lead-time tracking.
- Built and optimized SQL pipelines to integrate data from warehouse, vendor, and sales systems for unified reporting.
- Conducted trend analysis and root cause investigations on delayed shipments and supply chain bottlenecks.
- Partnered with supply chain managers to define KPIs, improve vendor accountability, and align reporting with strategic business goals.
- Delivered insights that reduced backorders and stockouts, improving overall supply chain efficiency and customer satisfaction.
- Automated monthly/quarterly reporting workflows, saving manual effort and ensuring data accuracy.

EDUCATION

B.E | Rajeev Institute of technology | VTU
