PROFESSIONAL SUMMARY

Detail-oriented QA Test Engineer with 4+ years of experience in testing web and mobile applications. Proficient in functional, regression, UI, and API testing with hands-on exposure to Selenium WebDriver (Python) for test automation. Strong understanding of SDLC/STLC, Agile/Scrum methodologies, and defect lifecycle management using JIRA. Skilled at writing clear test scenarios, test cases, and bug reports to ensure quality deliverables. Experienced in performance and compatibility testing. Eager to expand automation skills and grow into QA leadership roles.

EXPERIENCE

QA Test Engineer | Caledon Technologies India Pvt. Ltd | Jan 2021 - Present

- Designed and executed manual test cases for core rental workflows, payment integrations, and system APIs.
- Performed API testing using Postman, validating request/response payloads, status codes, and OTA-compliant schemas.
- Conducted functional, UI, smoke, regression, and compatibility testing across multiple releases and environments.
- Logged, tracked, and verified defects in JIRA, ensuring traceability to business requirements.
- Assisted in automation of regression test suites using Selenium WebDriver with Python, reducing manual effort.
- Participated in Agile ceremonies (daily stand-ups, sprint planning, retrospectives) to improve sprint quality.
- Executed database validations using SQL to ensure data integrity.
- Performed performance testing using Apache JMeter, generating reports on load handling and response times.
- Participated in defect triage meetings and contributed to release sign-offs.
- Prepared test summary reports and coordinated with business stakeholders for UAT.
- Collaborated with developers, business analysts, and product owners to clarify requirements and improve test coverage.

PROJECTS

Reservation Management System (RMS) - Internal Project

- Designed and executed 100+ test cases covering end-to-end booking workflows and payment integrations.
- Performed API testing using Postman and performance testing with JMeter.
- Assisted in automation of regression scenarios with Selenium (Python).
- Executed SQL queries to validate backend data consistency.
- Coordinated with developers during bug fixing to ensure timely resolution.
- Prepared test summary reports for management and stakeholders.

Rate Mate Pro (RMP) - Internal Project

- Validated rate comparison logic and price matching between internal and external systems.
- Executed manual test cases for dynamic business rules and participated in UAT.
- Performed cross-platform API validations.
- Contributed to writing reusable test cases for rate-related workflows.
- Identified edge cases for rate mismatches, reducing production issues.
- Conducted regression testing for multiple releases in Agile sprints.

Aggregator Project - Internal Project

- Tested vendor booking and service modules for Expedia-like aggregator.
- Developed Selenium (Python) automation scripts for regression.
- Performed load testing with JMeter and API testing with Postman.
- Executed cross-browser testing using BrowserStack.
- Verified OTA-compliance for vendor integrations.
- Documented defects and worked closely with third-party vendor teams to resolve integration issues.

Sabre Project - Client: Routes Car Rental / Sabre APIs

- Tested Sabre APIs integrated with Routes Car Rental platform.
- Validated OTA-compliant XML/JSON using Postman.
- Conducted load testing with JMeter.
- Executed end-to-end booking, commit, and cancellation tests.
- Ensured error-handling scenarios (e.g., invalid bookings, failed payments) were covered.
- Participated in knowledge-sharing sessions with client teams.

RSD Project (Routes Counter Software) - Client: Routes Car Rental

- Tested counter-based rental workflows for vehicle pick-up and drop-off.
- Verified integration with backend reservation and payment systems.
- Performed regression and smoke testing across multiple environments.
- Collaborated with developers to validate fixes and ensure smooth releases.
- Conducted usability testing for counter staff workflows.
- Prepared training documentation to help QA peers onboard quickly.

TECHNICAL SKILLS

- Testing Types: Functional, Regression, UI, API, Sanity, Smoke, Compatibility, Performance
- Tools: JIRA, Postman, Selenium WebDriver (Python), Apache JMeter, BrowserStack
- Database: SQL (Basic Query Validation)
- Version Control: Git (Basic)
- Test Artifacts: Test Scenarios, Test Cases, Bug Reports, Test Summary Reports
- Methodologies: Agile (Scrum), SDLC, STLC

EDUCATION

Bachelor of Engineering (B.E.) in Electronics and Communication
Adhichunchanagiri Institute of Technology, VTU | Chikkamagaluru | Sep 2015 - Oct 2019

CERTIFICATIONS

- Selenium WebDriver with Python - Udemy
- Master Class Software Testing with Jira & Agile - Udemy
- Learn JMeter from Scratch on Live Apps (Performance Testing) - Udemy
