Saurabh Bhoir

DevOps Engineer

Saurabh.bhoir32@gmail.com + 91 86 9296 5151 Mumbai, Maharashtra

Professional Summary

Experienced **DevOps Engineer** with 5+ years of hands-on expertise in automating infrastructure, managing CI/CD pipelines, and deploying scalable solutions in AWS environments. Skilled in **Terraform, Kubernetes, Jenkins, Docker, GitHub**, and **cloud-native architectures**. Adept at improving system availability, security, and performance through best practices. Strong collaborator across Agile teams seeking to drive operational excellence in a challenging DevOps or Cloud Engineering role.

Skills

Cloud Platforms: AWS (EC2, S3, RDS, IAM, VPC, Route 53, CloudWatch, ELB, Secrets Manager, EKS)
Infrastructure as Code: Terraform, AWS CloudFormation (basic)
CI/CD & Version Control: Jenkins, Git, GitHub
Containerization & Orchestration: Docker, Kubernetes, Helm, Amazon EKS, Istio, KEDA
Monitoring & Logging: Prometheus, Grafana, AWS CloudWatch, Alerting (Grafana Alerts)
Automation & Scripting: Bash (basic), Linux administration
Collaboration Tools: JIRA, Agile/Scrum methodology
Other Tools: Cert-Manager, Karpenter, AWS ECR

EXPERIENCE

DevOps Engineer

TSYS A Global Payments Company / August 2021 - Present

Project: CPAY & Recovery Select – Compass

• Created and managed **IAM** users, roles, and policies following the principle of least privilege for secure, granular access control.
• Troubleshot and resolved failed **Jenkins** jobs to maintain CI/CD workflows.
• Configured **Amazon RDS** with **MariaDB**, including setting up replication for **high availability** and **fault tolerance**.
• Documented procedures for configuring and utilizing AWS services to ensure team-wide knowledge sharing and consistency.
• Deployed **Amazon EKS clusters** and associated node groups using **Terraform** for scalable Kubernetes infrastructure.
• Implemented **Karpenter** in the **EKS** environment for efficient, cost-effective autoscaling of workloads.
• Enabled **end-to-end encryption** across microservices using **Istio Service Mesh** within the Kubernetes cluster.
• Deployed **KEDA** (Kubernetes Event-Driven Autoscaling) for event-based scaling of workloads.
• Configured **Horizontal Pod Autoscaling (HPA)** and integrated **Kube Metrics Server** for real-time resource monitoring and utilization tracking.
• Reduced EKS Nodegroup AMI update deployment time by 30%
• Managed secrets securely using **AWS Secrets Manager**, ensuring sensitive data was encrypted and access-controlled.
• Deployed and configured **Cert-Manager** for automated TLS certificate management and rotation.
• Created and maintained **Amazon ECR repositories** for storing container images in private, secure storage.
• Collaborated with developers, QA, and product support teams to identify and resolve build-related issues.
• Reviewed build outputs, debugged and optimized complex build processes, and engaged in technical discussions with developers, architects, and managers.
• Implemented deployment strategies, including **Blue/Green Deployments**, with Istio Service Mesh for seamless rollouts.
• Managed source code repositories and branching strategies using SCM tools such as **GitHub**.
• Experienced with **JIRA** for ticketing and project management.
• Participated in release planning, following complete **SDLC** and Agile methodology throughout project lifecycles.
• Set up and maintained Development, QA, UAT, and Production environments to support the application lifecycle.

Team Lead – Systems

Avenue E-commerce Ltd, Mumbai / December 2019 - July 2021

Project: Ecommerce Website DMart Ready

AWS & DevOps:

- Designed and deployed multiple applications utilizing key AWS services such as EC2, S3, RDS, VPC, IAM, ELB, CloudWatch, and Route 53.
- Created network architecture on AWS VPC, including subnets, Internet Gateways, Route Tables, and NAT gateways.
- Set up and automated high availability clusters using Auto Scaling, Load Balancers, and Route 53.
- Deployed AWS cloud infrastructure using Terraform for infrastructure as code (IaC).
- Mounted S3 buckets on Linux and Windows file systems for seamless data access.
- Configured VPC Peering Connections for secure peer-to-peer communication across VPCs.
- Created multiple VPCs and defined public and private subnets, distributing them across various Availability Zones.
- Managed IAM users and policies to enforce granular access, including custom policies for specific use cases like single-bucket access.
- Provisioned S3 buckets to store files and serve static web content as required.
- Monitored user activity and configuration changes using AWS Config and CloudTrail.
- Worked in Agile and Scrum development environments.
- Implemented CI/CD pipelines using Docker, Jenkins, GitHub, and AWS AMIs.
- Estimated AWS usage costs and identified cost optimization opportunities.
- Installed, configured, and administered MongoDB, MySQL, and MariaDB databases.

Associate Engineer

BK Systems Pvt Ltd, Mumbai / December 2017 - December 2019

Project: NABARD (Mobile Banking)

Project: Axis Universal Mobile Identity Management (Master Data Management)

- Installation and Setup of Postgres Database on Linux Based Operating Systems.
- Installation and Setup of Operating Systems Oracle Linux/Debian.
- Performance Tuning of Apache to handle request in milliseconds as per bank requirements
- Deployment of web services for Axis Mobile Banking, Axis UPI, Axis IMPS, Axis Set debit card pin Transactions
- Deployment of Pull & Push process to maintain customer demographic information securely.
- Functional Testing of application as well as API's Testing using Apache JMeter Tool.
- Analyzing daily traffic and shifting the traffic to multiple servers to ensure high availability.
- Monitoring and handling critical issues of Database syncing/replication.
- Deployment of Code and Testing of each short code (BAL, IMPS, RECHARGE).

Systems Engineer - Systems & Operations

ACL Mobile Pvt Ltd, Mumbai / October 2016 – December 2017

Project: Axiom Setup

- Installation and Setup of Oracle Database on Linux Based Operating Systems.
- Installation and Setup of Operating Systems Windows/Redhat Linux/CentOS/Debian.
- Administered Database user accounts; created, modified, deactivated user accounts.
- Monitoring the database Activity, Statistics & Performance.
- Managing Oracle Queue system level activities in SMS /EMAIL/OTP Queue.
- To monitor and ensure resource utilization like disk-space, Memory, CPU etc. is well within the specified limits
- Active participation in DR – DC activities

EDUCATION

B.Sc. IT

Mumbai University,

2013 - 2016

Global Certification

AWS Solution Architect – Associate

CKA – Kubernetes Administrator
