Resume Headline

Java Backend Developer — Expertise in Spring Boot, Microservices, REST APIs, Kafka, Docker, Kubernetes, AWS, and CI/CD pipelines — 6.2 years of experience in Banking, Retail, and Insurance domains delivering high-scalability, secure, and distributed enterprise applications.

Professional Summary

- 6.2 years of experience as a **Java Backend Developer** specializing in designing and building scalable microservices architectures.
- Proficient in **Java 8/11/17, OOP, Collections, Multithreading, and Exception Handling**.
- Hands-on expertise in **Spring Boot, Spring MVC, Spring Data JPA, Hibernate, RESTful APIs, and Microservices**.
- Experienced with **Kafka, RabbitMQ, Redis, AWS (EC2, S3, Lambda)**, and **Docker, Kubernetes, Jenkins, CI/CD**.
- Strong background in **MySQL, PostgreSQL, Oracle, MongoDB, and NoSQL databases**.
- Skilled in integrating third-party APIs, authentication (JWT/OAuth2), and implementing performance tuning and caching.
- Adept at working in **Agile/Scrum environments** with cross-functional teams across Banking, Retail, and Insurance domains.
- Passionate about **system design, scalability, and automation** to deliver high-availability backend solutions.

Technical Skills

Languages: Java (8/11/17)
Frameworks: Spring, Spring Boot, Spring MVC, Spring Data JPA, Hibernate
Databases: MySQL, PostgreSQL, Oracle, MongoDB, Redis
Microservices & Messaging: Kafka, RabbitMQ, RESTful APIs
Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Jenkins, CI/CD, Git, Maven, Gradle
Testing: JUnit, Mockito, Postman, Swagger
Monitoring: ELK Stack, Grafana, Prometheus
Methodologies: Agile, Scrum, TDD, System Design, Scalability, High Availability

Professional Experience

Software Engineer **HCL Technologies, Bangalore**
July 2024 – Present

- Designed, developed, and deployed scalable microservices using **Spring Boot** and **Kafka**, improving data throughput by 28%.
- Implemented **JWT-based authentication** and role-based access control with **Spring Security**.
- Integrated CI/CD pipelines using **Jenkins**, **Docker**, and **Kubernetes** to reduce deployment time by 35%.
- Automated daily build and deployment processes to ensure continuous delivery on AWS **EC2/S3/RDS**.
- Enhanced API response time by 25% through optimized query performance in **PostgreSQL** and **Redis** caching.
- Collaborated with cross-functional teams under the **Agile/Scrum** model for faster feature releases.

Software Engineer **Accenture, Bangalore**
June 2019 – July 2024

- Developed and maintained enterprise-grade applications using **Spring Boot, Hibernate, REST APIs**, and **Microservices**.
- Migrated legacy monolithic modules into a microservices architecture improving scalability and maintainability.
- Integrated **Apache Kafka** for real-time event-driven data streaming between services.
- Worked on **AWS (EC2, Lambda, S3)** for application hosting and serverless processing.
- Implemented unit and integration tests using **JUnit** and **Mockito** achieving 90% test coverage.
- Reduced production bugs by 30% by enforcing automated CI/CD pipelines and code quality gates.

Key Projects

Project 1: SmartBank Transaction Suite (Banking Domain)

Client: FinEdge Solutions, Singapore
Role: Software Engineer
Tech Stack: Java, Spring Boot, REST APIs, JWT, OAuth2, Microservices, Hibernate, JPA, Kafka, RabbitMQ, SQL, MongoDB, Redis, ElasticSearch, Docker, Jenkins, Kubernetes, AWS

Project Description:
SmartBank Transaction Suite is a secure digital banking platform designed for high-volume financial operations, enabling real-time fund transfers, transaction validations, and fraud detection. The solution modernized the legacy monolith into a microservices-based distributed system, integrated with Kafka for event-driven messaging and Redis for performance caching. Deployed across AWS with containerized services on Kubernetes, the system achieved 99.9% uptime and significantly reduced transaction latency. Enhanced observability and scalability made the suite compliant with financial audit standards and future-ready for API banking integrations.

Roles and Responsibilities:
- Designed and developed microservices for core banking modules using **Spring Boot** and **JPA**.
- Integrated real-time notifications using **Kafka** and asynchronous processing queues.
- Implemented secure **JWT/OAuth2** authentication for customer and admin APIs.
- Optimized SQL queries, improving transaction response time by 35%.
- Deployed services on **AWS EC2** and automated deployment pipelines using **Jenkins + Docker**.
- Monitored application health with **ELK Stack** and **Grafana**.
- Worked in Agile sprints and participated in daily Scrum and sprint retrospectives.

Project 2: RetailPro Order Management System (Retail Domain)

Client: Trendify Retail Pvt. Ltd., UK
Role: Java Developer
Tech Stack: Java, Spring Boot, REST APIs, Swagger, OAuth2, Hibernate, JPA, Apache POI, Kafka, RabbitMQ, MySQL, MongoDB, Microservices, JUnit, Mockito, CI/CD

Project Description:
RetailPro is a modern retail order management solution built to streamline order processing, supplier coordination, and payment reconciliation. The platform transformed a traditional ERP into a microservices-driven backend powered by Kafka for data synchronization across distributed modules. Integrated analytics and Excel-based reporting enabled management to make data-driven decisions in real time. The system leveraged Docker-based containerization, Jenkins CI/CD pipelines, and MongoDB for product catalog caching, leading to a 25% reduction in processing overhead.

Roles and Responsibilities:
- Developed RESTful APIs using **Spring Boot** for order, product, and supplier modules.
- Implemented asynchronous event handling with **Kafka** and **RabbitMQ**.
- Created reporting modules using **Apache POI** for Excel-based dashboards.
- Performed code reviews, API documentation via **Swagger**, and version control using Git.
- Configured CI/CD with **Jenkins**, enabling automated testing and deployment.
- Collaborated with product owners in **Agile/Scrum** cycles to deliver incremental releases.
- Increased API performance by 22% by optimizing service orchestration and caching logic.

Project 3: InsurePlus Claims Automation Platform (Insurance Domain)

Client: MediSure Group, Germany
Role: Junior Software Developer
Tech Stack: Java, Spring Boot, REST APIs, JSON/XML, Kafka, RabbitMQ, Spring Batch, MySQL, MongoDB, Cassandra, ElasticSearch, Docker, Jenkins, Prometheus, Grafana

Project Description:
InsurePlus is an intelligent insurance claims automation system designed to manage policy verification, claim filing, and fraud detection workflows. The solution replaced manual claim handling with an automated microservices architecture leveraging Kafka for event streaming and Spring Batch for scheduled data ingestion. Real-time metrics were visualized through Prometheus and Grafana dashboards, ensuring transparency and SLA compliance. The deployment pipeline was containerized via Docker and managed with Jenkins CI/CD, resulting in a 40% reduction in claim processing time and improved audit traceability.

Roles and Responsibilities:
- Developed claim validation and processing microservices using **Spring Boot**.

- Built scheduler jobs using **Spring Batch** for batch policy synchronization.
- Integrated inter-service communication via **Kafka** and **RabbitMQ**.
- Automated deployments using **Jenkins** with containerized **Docker** builds.
- Designed monitoring dashboards using **Prometheus + Grafana**.
- Optimized database access and introduced caching layers via **Redis**.
- Participated in Agile ceremonies and sprint retrospectives to ensure timely delivery.
