Experience Summary:

11+ years of experience specializing in Google Cloud Platform (GCP), data engineering, and cloud-native solutions. Proven expertise in architecting, designing, and implementing scalable and secure cloud data solutions, including data warehouses, data lakes, and ETL pipelines using BigQuery, Dataflow, Cloud Storage, and Pub/Sub. Skilled in SQL (T-SQL, PL/SQL, ANSI SQL), Python, Terraform, Kubernetes, and DevOps tools, with a strong foundation in microservices architecture.

Experienced in cloud migration, automation, and enterprise-wide data strategies, helping organizations define IT roadmaps, governance frameworks, and compliance strategies (ESG, CSRD, Regulatory Reporting). Adept at BI tool implementation (Tableau, Looker), data transformation (dbt), and performance optimization. Strong leadership, mentoring, and stakeholder management skills, with a passion for innovation, automation, and data-driven decision-making.

Roles and Responsibilities:

- Collaborate with clients to develop cloud strategies and roadmaps that are aligned with their business objectives.
- Perform detailed assessments of existing IT systems, identify the current state, and help clients envision their future state architecture in the cloud.
- Design a future-state architecture using GCP technologies (e.g., IaaS & PaaS), ensuring scalability, reliability, and manageability.
- Provide strategic recommendations on cloud platform adoption, migration planning, and roadmap development.
- Perform a discovery of existing applications, including architecture, infrastructure, and workload assessment.
- Lead the creation of transition-state architecture ensuring that legacy systems and modern cloud-native systems integrate seamlessly.
- Act as a cloud advocate by educating customers about the benefits and potential of GCP, helping them to better understand its value proposition.
- Lead technical discussions on cloud solution designs to ensure successful deployment on Google Cloud.
- Foster the adoption of GCP services by aligning technical solutions with the customer's business goals.
- Lead the architecture and design of cloud data solutions, including cloud data warehouses (BigQuery), data lakes (Cloud Storage), and ETL/ELT pipelines (Dataflow, Cloud Composer).
- Ensure data pipelines are scalable, efficient, and cost-effective, using GCP services and modern cloud technologies.
- Leverage modern cloud-native tools like Kubernetes, serverless technologies (Cloud Functions, Cloud Run), microservices architecture, and terraform to deliver robust and innovative cloud-based solutions.
- Design and implement distributed systems that are flexible, scalable, and able to handle high-volume data processing.
- Create and manage data transformation workflows for ingesting, transforming, and loading data into cloud-based systems.
- Use tools like dbt (Data Build Tool) to modularize and optimize data transformations, making them reusable and scalable.
- Ensure that data workflows align with business and technical requirements while adhering to best practices in cloud data architecture.
- Advocate for data governance best practices by implementing security and compliance measures, such as access control, encryption, and privacy policies.
- Ensure solutions meet regulatory frameworks like GDPR, HIPAA, and other industry standards related to data privacy and security.
- Work closely with data scientists, data analysts, and business stakeholders to gather data requirements and translate them into technical specifications.

- Collaborate with teams across the organization to ensure that cloud data solutions are aligned with business needs and analytics goals.
- Provide technical support to business intelligence teams and assist in creating data-driven insights and reports.
- Provide technical leadership and mentorship to junior and senior engineers. Help them grow by guiding them on best practices for GCP technologies and cloud data solutions.
- Offer troubleshooting support and advice on designing and optimizing data pipelines, data models, and cloud infrastructure.
- Build and maintain relationships with senior technical personnel and other key stakeholders within the client organization to ensure alignment on cloud adoption.
- Regularly engage with clients to assess the effectiveness of cloud implementations, make improvements, and support the long-term success of cloud initiatives.
- Collaborate with business intelligence teams to design and implement solutions using BI tools like Tableau, Looker, or Power BI.
- Build dashboards, reports, and visualizations that enable business decision-making and track key performance indicators (KPIs).
- Optimize BI queries for performance and ensure the accuracy and integrity of the data presented in these visualizations.
- Support AI/ML initiatives by using tools like Google Vertex AI to build and deploy machine learning models.
- Assist with the development of intelligent applications and leverage AI/ML techniques to extract insights from complex datasets.
- Work on use cases that utilize machine learning and natural language processing (e.g., DialogFlow for chatbot implementations).
- Develop data models to support BI processes, including designing relational and dimensional models (star schemas, snowflake schemas) for optimized querying and reporting.
- Focus on designing data pipelines that effectively aggregate, cleanse, and transform data for reporting and analytics purposes.
- Continuously monitor and research emerging cloud technologies, big data tools, AI/ML frameworks, and GCP services to stay on the cutting edge of cloud innovations.
- Share knowledge and insights about new tools and methodologies that can enhance the team's data engineering, analytics, and BI capabilities.
- Drive automation within cloud data pipelines and processes, reducing the need for manual intervention and improving reliability.
- Innovate by creating reusable modules or building frameworks that can be easily adapted for future projects.
- Develop best practices for streamlining cloud infrastructure and data workflows.
- Monitor the performance of data pipelines, cloud infrastructure, and database solutions to ensure high throughput and low-latency data processing.
- Optimize BigQuery queries for performance, implement best practices for partitioning, clustering, and caching to reduce costs and improve query speed.
- Implement strategies for cost optimization without compromising performance, such as query optimization and controlling data storage costs.
- Proactively identify and resolve issues or bottlenecks in the data pipeline (e.g., slow queries, failures, or resource overuse).
- Troubleshoot and resolve performance issues quickly to avoid business disruptions and ensure a smooth flow of data processing.
- Provide root cause analysis for any pipeline failures or performance degradation, and implement corrective actions to prevent recurrence.
- Strong problem-solving abilities and quick learning capacity.
- Detail-oriented and highly motivated.
- Excellent communication skills, with the ability to explain technical concepts to non-technical stakeholders.
- Leadership capabilities, with a track record of mentoring and guiding junior developers.

Technical Skills & Tools:

- **Cloud Platform:** Google Cloud Platform (GCP),BigQuery, Dataflow (Apache Beam),Cloud Composer (Apache Airflow),Cloud Storage, Bigtable, Pub/Sub, Cloud SQL, Cloud Functions, Kubernetes Engine (GKE),Cloud Run, Cloud Monitoring, Firestore, Apigee, Spanner,Cloud Deployment Manager

- **Data Engineering and Analytics Tools:**Apache Beam,Daaflow,Apache Airflow,ETL/ELT Tools: Tools like Talend, Informatica, and Snaplogic for data integration,
- **Big Data Tools:** Apache Spark, Hadoop, Hive, Flink, Sqoop
- Data Warehousing and Storage: BigQuery, Cloud Storage, Bigtable, Cloud SQL, Datastore, Spanner.
- **Programming and Scripting Languages**: Python, SQL, PowerShell, Shell Scripting (Bash).
- **DevOps and Automation**: Terraform, Cloud Deployment Manager, CI/CD Tools: Jenkins, GitLab, or GitHub, Docker, Kubernetes (GKE)
- **Reporting and Visualization:** Google Looker, Power BI, Tableau, Google Data Studio.
- **Machine Learning and AI Tools:** Vertex AI, AutoML, TensorFlow, MLflow
- **Other Tools and Frameworks:** Apache Kafka, Apache Beam, Cloud Dataproc.
- **Documentation**: BRD, SRS, Data Dictionary, Test Cases, Release Notes
- **Agile Methodologies**: Scrum, Kanban

Work Experience:

Company	**TCS**
Designation	AST
Duration	Jan 19 – till date
Domain/Special Skills	Data Engg
Location	Bangalore

Company	**MetLife**
Designation	Senior Business Analysts- Analytics & BI
Duration	Apr 17 – Dec 18
Domain/Special Skills	Data Engg
Location	Pune

Company	**Infosys Pvt. Ltd.**
Designation	Senior Systems Engg
Duration	Feb14 – Mar17
Domain/Special Skills	Data Engg
Location	Chennai

Academic Qualification:

EDUCATION	
B. Tech	**COLLEGE: -JSSATE, NOIDA (Batch: 2008-2012.)** **UNIVERSITY: -UPTU, Lucknow, Uttar Pradesh.** Stream: Electrical Engineering**. Percentage Secured** :65.56%
School	Class 12: K.V. Janakpuri, New Delhi. (CBSE). **Score:** 71.50% Class 10: K.V. Janakpuri, New Delhi. (CBSE). **Score:** 70.50%

Personal Details:

Date of Birth	21-Aug-1990
Nationality	Indian
Passport Availability	Yes
