SUMMARY:

Total 7 years of IT experience Data Warehousing the ETL Developer and Production Support and Data integration tools including Informatica power center, Informatica intelligent Cloud services (IICS).

I have L2,L3 supporting experience.

Experience working with informatica IICS tools effectively using it for Data integration.

Experience working with IICS concepts relating to data integration, Monitor.

Having good knowledge on Data warehouse Concepts, UNIX and IICS

Have good experience In **Control M** and **Performance Tuning**

Expertise in ETL process using Informatica 10/9.x/8.x and **IICS.**

Extensively Worked on Informatica Designer Components Source Analyzer, Warehousing Designer and **Agile methodology**

Transformations Developer, Mapplet and Mapping Designer.

Vast experience in designing and developing from various transformations logic like Unconnected and Connected lookups, Router, Filter, Expression, Aggregator, Joiner, Update Strategy.

Extensive experience in **extraction, transformation and loading** (**ETL)**of data from different heterogeneousSource systems like Flat Files, Oracle, SQL Server.

Involved in performance tuning by identifying the bottlenecks either at source, target, mapping, session or transformation.

Sound knowledge of RDBMS concepts, with hands on exposure in the development of relational databaseenvironment using SQL

Good experience in **Teradata and good knowledge on Talend**

TECHNICAL SKILLS:

Tools	Informatica 8.x,9.6.1,10.2,10.4, IICS
Databases	Oracle, SQL, Teradata

EMPLOYMENT HISTORY:

Name of the Company	Designation	From	To	Duration (Years)
Cognizant Technology solutions	Associate project	May 2023	August 2025	2.3 years
HTC Global service india PVT LTD	L2 Engineer	June 2021	April 2023	1.8 years
Capgemini	Associate Consultant	April 2018	May 2021	3.1 years
Cognizant Technology Solutions	Associate Developer	Nov 2015	April 2017	1.5 years

Project Summary:

Project Title	STORA ENSO
Client	FINLAND
Duration	Jun 2023 – july 2025
Role	Software Developer
Project specific skills	Informatica 9.6,10.4 SQL, IICS developer

Project description:

Stora Enso is a Nordic based leading provider of renewable solutions in packaging, biomaterials, wood and paper on global markets. Our customers include packaging, joinery and construction industries as well as publishers, printing houses and paper merchants. Stora Enso serves mainly business-to-business customers through its own global sales and marketing network The main technical objectives of Stora Enso is to implement a scalable, high-performance reporting system.

Roles and responsibilities:

Role: Software engineer

- Understanding the business rules and sourcing the data from multiple source system using IICS
- Creating Informatica mappings, sessions and workflows using different transformations to implement business logic.
- Understanding the Requirement Specifications from the Technical Specification Document and converting them into the deliverables.
- Imported required target tables into target designer.
- Worked on Informatica Power Center tools like Source Analyzer, Warehouse Designer to import the source and target database tables. Mapping Designer, Workflow Manger and Workflow Monitor in informatica ETL.
- Extensively developed mappings using the transformations like Expressions, Aggregators, Lookup, update strategy, Rank, Sorter, Normalizer, and Sequence Generator etc.
- Extensively used mapping parameters and variables.
- Tracked slowly changing dimensions.
- Worked On Control M and Unix
- Worked on IICS Data integration and Monitoring.

Project Summary:

Project Title	WIND MOBILE COMMUNICATION
Client	WIND, Canada
Duration	Nov 2019-May 2021
Role	Software Developer (ETL Developer)
Project specific skills	Informatica 9.6, Teradata

Project description:

The Enterprise Data Warehouse (EDW) consolidate current / historical data from multiple sources in support of WIND Mobile management. The data warehouse is composed of multiple architectural layers. Each layer is important to produce integrated data that is flexibly maintained in the EDW Integration Layer which supports the report Semantic Layer.

Roles and responsibilities:

Role: Software Develope

- As a developer first I need to understand the business requirements.
- Writing the test cases for unit testing as per requirement.
- Created tables and write the quires at database level.

- ❖ Prepared unit test cases and documentation.
- ❖ Performed data validation tasks after data load and identify the data mismatches.
- ❖ Performed data validation for columns, tables among data bases in source and target.

Analyze the parameter files.

- ❖ Analyzed the requirements to identify the necessary tables that need to be populated into the staging area.
- ❖ Extensively worked with Source Analyzer, Target Designer, Transformation Developer, Mapping Designer and Mapplet Designer. Using ETL Transformations
- ❖ Involved in analyzing the source data coming from different Data sources such as Oracle, and Flat files.
- ❖ Used mapping Parameters, Variables and Tasks.
- ❖ Used designer to populate data into staging area and Warehouse.
- ❖ Designed various mappings using transformations like Router, Update Strategy, Filter, lookup, Store procedure, Joiner, Aggregator, and Expression Transformation.

Used workflow manager to create workflows, sessions.

- ❖ Extracting of data from different sources like oracle tables and flat files
- ❖ .Developed slowly changing dimensions as per requirement.
- ❖ Involved in unit testing at mapping level and debugged at mapping level.

Involved in Performance tuning of the located mappings.

Project Summary:

Project Title	Bank of Montreal Management System
Client	Bank of Montreal, Canada
Duration	April 2018 – Dec 2018
Role	Software engineer developer and support (ETL)
Project specific skills	Informatica 8.6, Oracle

Project description:

Description:

This project is involved in the development of data warehouse for BOM based on four kinds of data marts such as Accounts, Loans, Credit Cards and Insurance. Each data marts represent a collection of data pertaining to a single business process. In loan data marts BOM Involved in disbursal of loan amounts for various purposes like: Personal Loan, Educational Loan, Vehicle Loan, Housing Loan etc. The company requires different levels of analysis regarding loan amount, type of loans, type of customers, type of payment schedules, interest rates (variable or fixed), defaulters list and the penal interest calculations etc. They needed a Data Warehouse so that they could maintain historical data and central location for integration, analyze business in different locations, according to profit areas, which could serve a purpose of a DSS for decision makers.

Roles and responsibilities:

Role: Software engineer

- ❖ Understanding the business requirements.
- ❖ Creating Informatica mappings, sessions and workflows using different transformations to implement business logic.
- ❖ Understanding the Requirement Specifications from the Technical Specification Document and converting them into the deliverables.
- ❖ Imported required target tables into target designer.
- ❖ Worked on Informatica Power Center tools like Source Analyzer, Warehouse Designer to import the source and target database tables. Mapping Designer, Workflow Manger and Workflow Monitor.

- Extensively developed mappings using the transformations like Expressions, Aggregators, Lookup, update strategy, Rank, Sorter, Normalizer, and Sequence Generator etc.
