Sireesha Padala
Informatica IICS Expert
sireeshapadala698@gmail.com/ Contact NO: +1 (469) 836 9718

PROFESSIONAL SUMMARY

- 11+ years of hands-on experience in ETL Projects in development, maintenance, and enhancements of datawarehouse using IICS/Powercenter.
- 6+ years of leadership experience, includes the management and coordination of an Informatica team.
- Exposure in working closely with Business Analysts and Product Owners at Client Location in Finland Helsinki.
- Created High Level/Low Level/Design Level Documents for development.
- Having 8+ experience working with complex SQL Queries for generating Reports.
- Proficiency in Software Development Life Cycle (SDLC) requirement analysis & definition, designing, coding, testing, implementation.
- Worked on Control-M tool to create and schedule batches. Also created calendars and daily/Monthly/Quarterly schedules for critical batches.
- Successfully creating the Linked Services on the source and as well for the destination servers
- Moving data from on-premises Oracle to Snowflake DB with the help of pipeline and data flows.
- Creating Mapping Tasks, Task Flows in IICS interface.
- Implemented Complex Logic in Mapping task and reduced the execution Time of Jobs.
- created synchronization Task and Replication Task for data copy within Lower environments for Testing the code in Lower environments.
- Created and automated workflows with the help of triggers.
- Worked on developing complex BTEQ scripts in Teradata.
- Worked on developing MLOAD, TPUMP, FLOAD,TPT Scripts.
- Worked on Complicated Mappings Like CDC (Change data capture), XML Parser, Huge data handling techniques implemented.
- Configured PowerExchange source definitions within PowerCenter to extract data from SAP, Oracle, DB2, and flat files for archival and ETL workflows.
- Imported metadata from external systems using PowerExchange and integrated it into PowerCenter Designer, facilitating seamless mapping development.
- Tuned PowerCenter sessions using PowerExchange partitioning and pushdown optimization to handle high-volume data loads efficiently.
- Excellent team player & an effective communicator with strong analytical, leadership, interpersonal skills as well as ability to work effectively in fast paced environment.
- Production Support experience in identifying the root cause of the failure and provide the temporary fix for the Schedule to finish on time and deliver the reports to business.
- Perform data quality analysis, report data quality issues, and propose solutions for data quality management.

- Implemented Push down optimisation techniques(PDO) as part of performance tuning of mappings execution.
- Actively worked on weekend maintenance, Monthly maintenance activities.
- Created Mapping documents, Solution Documents also Service requests, Incidents, Problem Tickets to get the approvals for solution implementation.
- Proactive source files follow-ups. Month-end Loads Tracking and handling the Edward Loads.
- Developed Python Scripts for the function of file watcher. Tested them end to end in the unit testing, test environment.

Technical Skills:

PRIMARY SKILL – ETL Tools like Informatica PowerCenter/ IDMC, Abinitio,TERADATA, DB2, SQL
SECONDARY SKILL –Unix Scripting, Scala, Snowflake, Python
Cloud Services - AWS, Azure , GCP
Visualization Tool – PowerBI, Tableau, BO
Scheduling Tools - WLM, Control-M, Autosys,CA WorkLoad Automation
Ticket tracking tool - Jira, Service Now
Delivery Methodologies – Agile Methodologies (Scrum/SAFE, Kanban)

ACADEMICS

Bachelor's degree in engineering from Andhra University, 2013 passout.

PROJECT DETAILS
Dated : Aug 2024 - Current
Client : GAIG
Role: Senior ETL Developer

Roles and Responsibility:

- Analysis of requirements
- Creating the Design documents (HLD, LLD)
- Successfully creating the Linked Services on the source and as well for the destination servers
- Performance tuning of SQL queries and stored procedures using SQL Profiler and Index Tuning Wizard.
- Trouble shoot any kind of data issues or validation issues.
- Creating Mapping Tasks, Task Flows in IICS interface.
- Implemented Complex Logic in Mapping task and reduced the execution Time of Jobs.

- created synchronization Task and Replication Task for data copy within Lower environments for Testing the code in Lower environments.
- Develop using python scripting and SQL for data extraction, transformation, and aggregation from multiple file formats for analyzing and transforming the data uncover insight into the customer usage patterns.
- Experience using Snowflake cloud data warehouse for data integration from numerous source systems, including importing nested JSON structured data into a Snowflake table.
- Testing (Unit Testing, Integration Testing, Regression Testing, System testing, User Acceptance Testing (UAT))
- Provide support or fix the defects raised during the Integration and UAT
- Developed Mappings in CAI for API's as Source and implemented transformations to load the target tables.
- Reconciliation between the existing system and the newly developed code.
- Unix scripting for handling the data validation of source Files.
- Using CDQ developed Reconciliation process between sources data to End Tables.

Environment: Informatica IDMC, Snowflake, UC4

Dated: Oct 2021 – July 2024
Client : EuroClear Finland

Role: Sr. Consultant

Roles and Responsibility:

- Collaborate with data analysts, engineers, and stakeholders to understand data requirements and design efficient data models.
- Creation, Testing, Maintenance of new Connectors and Drivers.
- Implemented framework to identify any server issues or IICS downtime to intimate the effected email List.
- Provided operations and support activities related to connectors ,drivers,secure agent issues etc.
- User Access management like creating acess level permissions , Groups , SAML.
- Worked on GITHUB related activities like Access management , User creation , Repository Management , onboarding etc.
- Data analysis for the new systems.
- Successfully creating the Linked Services on the source and as well for the destination servers
- Moving data from on-premises Oracle to Snowflake DB with the help of pipeline and data flows
- Created and automated workflows with the help of triggers
- Performance tuning of SQL queries and stored procedures using SQL Profiler and Index Tuning Wizard.

- Develop using python scripting and SQL for data extraction, transformation, and aggregation from multiple file formats for analyzing and transforming the data uncover insight into the customer usage patterns.
- Migrated the current project consisting of 450+ Mappings into IDMC.
- Developed, Migrated, tested end to end Mapping Tasks, Task Flows and successfully migrated to Production.
- Unix scripting for handling the data validation of source Files.
- Testing (Unit Testing, Integration Testing, Regression Testing, System testing, User Acceptance Testing (UAT)).
- Strong Data warehousing ETL experience using Oracle PL/SQL, Informatica Power Center tools (Designer, Workflow Manager, Workflow Monitor, Repository Manager)
- Worked on the Control-M tool to create and schedule batches. Also created calendars and daily/Quarterly/Monthly schedules for critical batches.
- Unix Scripting for Source File Validation.
- Unix scripts for handling data manipulation and to parse logs, extract and format data, and perform bulk operations on files.
- Working experience in operating systems like windows, ubuntu, Unix.
- Performed the on-call support role, when there is a failure in production Jobs, we get the call and need to fix the issue within 4 hours of failure.
- Created Mapping documents, Solution Documents also Service requests, Incidents, Problem Tickets to get the approvals for solution implementation.
- PowerBI visualization tool is used for data interpretation.
- Worked on Complex SQL Queries to ingest in powerBI Tool in generating Reports.

Environment Used:

ETL Tools: Informatica IICS, IDQ

Database: Snowflake, Oracle

Scheduling Tools: Control-M

Scripting Language: Python Scripting

Reporting Tool: PowerBI

Dated : Aug 2018 - Oct 2021
Client : Chubb Insurance
Role: Technical Lead

Roles and Responsibility:

- Analysis of requirements
- Creating the Design documents (HLD, LLD)
- Successfully creating the Linked Services on the source and as well for the destination servers
- Performance tuning of SQL queries and stored procedures using SQL Profiler and Index Tuning Wizard.

- Configured PowerExchange source definitions within PowerCenter to extract data from SAP, Oracle, DB2, and flat files for archival and ETL workflows.
- Imported metadata from external systems using PowerExchange and integrated it into PowerCenter Designer, facilitating seamless mapping development.
- Tuned PowerCenter sessions using PowerExchange partitioning and pushdown optimization to handle high-volume data loads efficiently.
- Trouble shoot any kind of data issues or validation issues.
- Creating Mapping Tasks, Task Flows in IICS interface.
- Implemented Complex Logic in Mapping task and reduced the execution Time of Jobs.
- created synchronization Task and Replication Task for data copy within Lower environments for Testing the code in Lower environments.
- Develop using python scripting and SQL for data extraction, transformation, and aggregation from multiple file formats for analyzing and transforming the data uncover insight into the customer usage patterns.
- Developing the Mappings, mapplets, reusable transformations, sessions and Workflows.
- Experience using Snowflake cloud data warehouse and AWS S3 bucket for data integration from numerous source systems, including importing nested JSON structured data into a Snowflake table.
- Testing (Unit Testing, Integration Testing, Regression Testing, System testing, User Acceptance Testing (UAT))
- Provide support or fix the defects raised during the Integration and UAT
- Developed Tasks using API's as Source and implemented transformations to load the target tables.
- Reconciliation between the existing system and the newly developed code.
- Unix scripting for handling the data validation of source Files.
- QlikView visualization tool is used for data interpretation.

Environment: Informatica PowerCenter/IDMC, CDQ,IDQ,SQL, Control-M, Python Scripting

Dated : Feb 2016 – Aug 2018
Client: Anthem Insurance
Role: Senior ETL Developer
Responsibilities:

- Coordinated with Onsite Team and provided seamless support, analyzing issues and providing solutions for the same and doing the change requests.
- Worked on developing complex BTEQ scripts in Teradata.
- Worked on developing MLOAD, TPUMP, FLOAD Scripts.
- Monitoring of 10k+ jobs in CTM Scheduling Tool.
- Actively worked on weekend maintenance, Monthly maintenance activities.
- Proactive source files follow-ups. Month-end Loads Tracking and handling the Edward Loads.

- Developed Unix Scripts for the function of file watcher. Tested them end to end in the unit testing, test environment.

Environment: Informatica Power Center 9.6, IDQ,Teradata, WLM, SNOW, Contol-M.

Dated : Jun 2013 – Jan 2016

Client : Liberty Mutual

Role: Associate Engineer

Responsibilities:

- Developing the Mappings, mapplets, reusable transformations, sessions, and Workflows
- Testing (Unit Testing, Integration Testing, Regression Testing, System testing, User Acceptance Testing (UAT))
- Provide support or fix the defects raised during the Integration and UAT
- Creating the Status Reports

Technologies used: Informatica PowerCenter, Teradata, DB2, Unix Scripting,CA WorkLoad Manager

---

Awards and Recognition:

- Client Appreciations for smooth Migration of project into Cloud – Sep 2023
- Certificate of completion for Data Analytics issued by LinkedIn.
- Achieved a Badge on completion of Generative AI Essentials Course.
- Achieved a Snowflake Badge for completing "Hands on Essentials - Data warehouse" issued by Snowflake.
- Awarded as the "**Significant delivery Award**" for delivering the project with Zero postproduction defects in Accenture.
- Client appreciation emails for reconciliation and pulling the reports as per business requirement within a short span of time for residential & SME LOB's.
- Topper of the Batch in engineering with 8.22 CGPA.
