Vinay Kanth Boggarapu

Cloud Data Engineer

17+ Years of Expertise in Information Technology and 5+ years of experience in GCP Cloud Data Engineer with a demonstrated history of working in Banking, Telecom, and Retail domains. Extensive Knowledge in GCP-Google Cloud Platform, Teradata , SQL/PLSql and Data ware house concepts. Skilled in requirement gathering, cost estimations, Agile Methodologies, Database concepts, Performance tuning in various data warehouse Applications. Good experience in Agile Method of working and with Atlassian tools like JIRA and Kanban.

GOOGLE CLOUD PLATFORM (GCP)

- Very good Knowledge and hands on experience on cloud storage, cloud sql and Big query.
- Created pipelines using Airflow to Bigquery
- Knowledge on concepts like GCP Projects, VM Instances, Images, Disks, Service Accounts, VPC, Hybrid Networks like VPN , VPC Peering, Shared VPC's, creating Instance Templates, Instance Groups, Load Balancing and Dataflow
- Basic understanding of Kubernetes.
- Very good knowledge on compute service-GCE, GAE, GKE, Cloud run and Cloud functions.
- Created infrastructure by using Terraform.
- Did POC's in implementing CI-CD Pipelines using GCP Devops offerings like Cloud Run, Cloud Build, GKE, Docker, Jenkins, GIT , GIT hub and Source Repositories.
- Hands on experience in migration projects like Teradata to Bigquery, Hadoop to Bigdata, Datastage to Datafusion

Experience

Tata Consultancy Services – Apr 2008 – Till date - India, Australia and United Kingdom

Cloud Data Engineer - Jan 2021 - Current

I have worked in different roles in my work experience, currently working for client-Lloyds banking group Hyderabad, India as a Cloud Data engineer in a scrum team

Education

2004-07 - MCA - Master of Computer Application
Wesley PG college, Osmania University - Hyderabad ,India

2001-03 - Degree - B.Sc Computer Science
National Degree College - Nandyal, Andhra Pradesh, India

KEY TECHNICAL SKILLS

Data

- Teradata
- SQL,
- Cloud Sql
- Big query

CERTIFICATIONS

- Google Cloud Professional Architect
- Google Cloud Engineer
- Vantage Associate engineer
- Multiple internal TCS certifications
- Certified with Teradata 12 Certified Professional.
- Certified with Oracle 9i for Developers (OCP).

Professional Experience

Client - Lloyds Banking Group - Hyderabad, India

Cloud Data Engineer Mar 2023 –Till date

Client - Lloyds Banking Group - Manchester, United Kingdom

Cloud Data Engineer **Jan 2021 –06/03/2023**

Group Data Warehouse (GDW) is the data hub for Lloyds. It is more operational than traditional warehouses. It satisfies 4 critical drivers for the Bank: Generating Income, Cost Management, Protecting the Bank, Enhancing the Customer Experience.

- Working in Agile Model with 2 weeks of Sprint for components Delivery.
- Create the Data lineage /Data Catalog for better understanding of Data-flow from source to Target.
- Create Operational Metadata for getting job dependencies and frequencies.
- Implement data flows to connect operational systems, data for analytics and ETL systems
- Document source-to-target mappings.
- Involved in Cloud migration stragey from on-premises (GDW Teradata) to GCP Bigquery.
- Analyzing and documenting the consolidation before the Data migration.
- Write ETL scripts and Python pipe line code to make sure the ETL process performs optimally and are Cloud compatible.
- Created pipelines using Airflow by using Python and fetching and loading GCS files to Bigquery.
- End to End hands on experience from Teradata to GCP Bigquery migration
- Hands on experience from Hadoop to Bigquery migration
- Hands on experience from Datastage to Datafusion
- Hands on experience in creating GCP Projects, VM Instances, Images, Disks, Service Accounts, VPC Networks and creating Instance Templates, Instance Groups, Load Balancing
- Having knowledge on creating CI-CD pipelines as well.
- Good Exposure on GKE and Terraform.
- Proficient usage of GitHub Enterprise, Confluence, SharePoint - in sharing the information.
- Work with subject matter experts , solution Architects and project team to identify, define, collate, document and communicate the data migration requirements in cloud.
- Assisting the Product owner in refining the backlog and knows how to help prioritize backlog items against technological feasibility and business viability metrics .

Client -Lloyds Banking Group - Pudsey/Manchester,United Kingdom

Infrastructure/Environment
- GCP
- Terraform

Programming Languages
- Python
- Oracle Sql/plsql
- Java basics

Framework/Libraries
- Google Cloud
- Git
- Git hub

Middleware
- Pub-Sub

OTHER SKILLS
- Design and Architecture
- Technical Leadership
- Innovation
- Distributed Computing
- Capacity Planning and Sizing
- DevOps
- Agile

SOFT SKILLS
- Communicator
- Thinker
- Innovative
- Collaborative
- Intuitive

Technical lead **May 2018 – May 2021**

- Understanding business requirement, creating IA document, providing cost estimation
- Creating design documents like ADD/TDD/ITSD.
- Coordinate with Offshore team and assisting them in every aspect of the delivery.
- Assisting the team in moving to an agile way of working by involving them in daily stand up calls and educating the team with JIRA activities, usage of Kanban boards in tracking the issues.
- Expertise in working in Teradata V2R16.x systems and used utilities like MultiLoad, FastLoad, FastExport, BTEQ, TPump, Teradata SQL
- Creating change request and coordinate with all the required parties for successful implementation
- Well experienced in defining, designing, integrating, and re-engineering the Enterprise Data warehouse and Data Marts in different environments like Teradata, Oracle with multiple Terabytes of size and various levels of complexity.
- Good understanding of project management methodologies and SDLC
- Proficient in data warehouse development practices and processes

Client Lloyds Banking Group - Hyderabad, India

Senior Developer **Aug 2016 - Apr 2018**

- Understanding business requirement, creating IA document
- Creating design documents like ADD/TDD/ITSD.
- Developing the code by using TD utilities MultiLoad, FastLoad, FastExport, BTEQ, TPump, Teradata SQL
- Coordinate with onshore team and gathering all the inputs and helping the team
- Implementation support

Client - Vodafone Hutchinson – Sydney, Australia

Vodafone is a leading Telecom service provider in Australia. Responsible for a multi-million dollar program in Business Intelligence stream for a major Telecom services provider in Australia.

Solution Designer / Senior Developer **Jan 2015 - Aug 2016**

- End to End project delivery in BI stream by assuring on-time delivery with high quality
- Analyzing and providing project estimation based on High Level Design
- Preparation of detailed project plan which includes assessment report, efforts and estimation, cost and budget, scope, assumptions, dependencies, risks along with mitigation plans and progression and regression test approaches
- Connecting with Solution Architect and preparing database design, data modelling, data processing, data integration, data analysis, data profiling, data migration methodologies and approaches
- Incorporating the best practices and lessons learnt to fine tune modelling approaches, design considerations, effort estimation, coding standards, quality standards and performance tuning
- Writing pseudo code, flow diagrams to communicate the complex business functionality
- Preparation of UT, ST, IP, Operational Guide, DTP, TOM and Test Cases
- Collaboration with customer and offshore team for successful project execution

Client - Tata Tele service Limited(TTSL) - Hyderabad, India

TTSL is a key business player in telecom sector in India offering services like wireless, wireline, Mobile, Leased Line, ISDN etc. The aim of this project is to give operational support to ICOMS application and enhancement of the application with new features as per the business requirements in the competitive market

Developer **Sep 2010 - Dec 2014**

- Gathering requirements from the customer
- Analyzing the feasibility and impact of the requirements, defining scope, estimating the efforts
- Developing complex SQLs, Cursors, Stored Procedures, Functions and Triggers for new requirements
- Identifying the gaps & risks with the new business requirements and working on to mitigate
- Working with various interfacing teams like E-POS, CRM, BP, BI-COGNOS and providing technical and functional support for enhancement or development in the interfacing systems
- Automating the commission run after the extractions get completed
- Optimizing the existing triggers, complex store functions and procedures
- Preparing Unit Test Cases and Release Plans

Client - JCPenney - Chennai, India

JCPenney is an American departmental store chain. The project involved support and maintenance of entire merchandising and pricing systems of the company. Merchandising and Assortment Planning (MAP) System in JCPenney manages the financial planning, item setup, assortment selection, purchasing and allocation of merchandise to be carried in stores, print and internet.

Developer **Aug 2008 - Aug 2010**

- Requirement gathering, designing, coding and implementation of new enhancements
- Monitoring Batch jobs scheduled using CRON and ESP
- Identifying the root cause of recurring issues and fixing
- Collaborating with customers and business users
- Ensuring that issues are fixed within the agreed SLA

Additional Information

I am working with TCS as a Cloud Data engineer. I am expertise in Google Cloud Platform and did migration from Teradata to GCP. I have/had worked in most of technologies related to Data side. My role is to design end to end solution with the best technologies and also expertise in the performance optimization and the project review.
