Professional Summary

Android Developer with 4+ years of experience building scalable, high-performance apps using Kotlin, Java, and MVVM. Skilled in improving app stability, reducing crashes, and writing clean, testable code. Passionate about Jetpack Compose and building user-friendly mobile applications.

Skills

Technical Skills: Kotlin, Java, ViewModel, LiveData, Flow, Room, WorkManager, Dependency Injection (Hilt), Data Binding, MVVM, Coroutine, Jetpack Compose, Retrofit, Firebase, RESTful APIs, Unit Testing, Git
Tools: Android Studio, Postman, JIRA, Firebase Console, Play Store Developer Console
Soft Skills: Problem-Solving, Team Collaboration, Client Communication, Cross-functional Collaboration

Experience

Neosoft February 2024 – Present
Software Engineer - Android

- Gained deeper experience with Jetpack Libraries like **ViewModel**, **LiveData**, **Navigation**, **Room**, **DataBinding**, and **WorkManager** to enhance app architecture and background processing.
- Implemented AES-based encryption and SSL pinning to secure sensitive data for 3L+ users, protecting against reverse engineering and MITM attacks.
- Contributed to the adoption of agile methodologies, utilizing Jira and Confluence, improving team productivity by 15% through well-defined timelines and iterative development cycles.

Yudiz Solutions January 2021 – January 2024
Mobile Application Developer - Android

- Developed and maintained over 7 Android applications using **Java**, **Kotlin**, and Android SDK that support different device configurations, with responsive UI/UX following Material Design guidelines.
- Applied MVVM, MVP, and Clean Architecture across 5+ Android projects, improving code maintainability, scalability, and reducing feature delivery time by 30%.
- Managed Google Play Store releases independently, ensuring timely launch and quality standards.

Projects

Jhatpat Mobile - Fintech Domain | *Kotlin*, *Java*, *SQLite*

- Fintech app for IIFL DSAs to quickly collect customer data and documents for home loan processing.
- Worked closely with designers, developers, and product owners in an Agile environment to understand business requirements and successfully deliver 10+ features across multiple sprints.
- Led migration of an outdated Java codebase to Kotlin, improving maintainability and stability for partner apps. This change helped streamline development workflows and reduced time spent on bug fixes by approximately 20%, based on internal feedback.

Dabb Social - FoodTech Domain | *Kotlin*, *MVVM*, *Hilt*

- Dabb Social is a food-ordering app where restaurant owners showcase dishes and customers place pick-up orders.
- Built the app from scratch, adding major features like social login, order placement, Stripe payment gateway, in-app chat, and map integration—resulting in a smoother user experience and boosting user engagement by 30%.
- Improved code quality and app stability by configuring Proguard for 30% smaller APK size, writing Unit test to cover critical logic, and conducting regular code reviews to maintain clean, maintainable code.

Discogs - Music E-commerce Domain | *Java*

- Discogs is a music marketplace app for discovering, cataloging, and buying physical music from a global seller base.
- Worked on an app used by over 1 million users, focusing on crash fixes and performance improvements. Used **Crashlytics** to debug and resolve real-world issues, making the app more stable and user-friendly.
- Improved app performance through memory optimization, modular architecture, and clean code practices following **SOLID** principles.

Education

GLS University 2019 - 2021
Master of Computer Application *7.62 CGPA*

Saurashtra University 2016 - 2019
Bachelor of Computer Application *6.67 CGPA*
