Profile

Big Data Engineer with around 4 years experience in designing and optimizing large-scale ETL pipelines, leveraging **PySpark, Hadoop, Hive, SQL, Python and BFSI domain expertise** to deliver high-performance, scalable big data solutions.

Technical Skills

Programming Languages:	Python, SQL
Big Data Technologies:	Spark, PySpark, Spark SQL, YARN, Hadoop, Hive, Impala
Data Engineering Tools:	Hue, Jira, Bitbucket, Jenkins,WinSCP, MS Excel
Cloud computing:	Azure (ADF, Databricks)
Orchestration:	Airflow, CA7
Visualization:	Power BI (Dashboard Design & Data Modeling)

Certifications

Python Developer - Udemy

SQL Developer - Udemy

Apache Spark - LinkedIn Learning

Power BI Workshop – Amazon Store Sales Dashboard (Visual Analytics KPI Tracking)

Experience

Tata Consultancy Services December 2021 - Present

Big Data Engineer *Bangalore, India*

- **Script Development**: Designed and developed PySpark and Hive scripts to process 1TB+ datasets for reporting and analytics, improving runtime by 30 percent.
- **Table Design and Management**: Created and maintained external Hive tables and views using HQL (Hive Query Language), including regular schema alterations and metadata updates to support evolving data models.
- **Data Protection Compliance**: Integrated property masking techniques in Hive data layers to safeguard sensitive information and ensure adherence to data privacy standards.
- **ETL Workflow Execution**: Handled end-to-end ETL pipelines across development, QA, and UAT environments-from data ingestion using Sqoop to transformation in PySpark and loading into final consumption layers.
- **Query Performance Tuning**: Improved query performance by up to 40 percent through partitioning, bucketing, and optimized Spark transformations by using join strategies.
- **Big Data Platform Transition**: Actively contributed to the migration of Hadoop components from Cloudera CDH to CDP, including redevelopment of workflows and validation of transformed datasets.
- **Data Architecture and Optimization**: Performed a detailed analysis of the source data sets to design optimal partitioning and storage strategies, utilizing PySpark functions such as repartition() and coalesce() to improve performance in the data pipelines.
- **Regression Testing and Quality Assurance**: Conducted rigorous regression tests on the data to validate transformation logic and ensure consistency with client specifications.
- **Production Scheduling and Automation**: Managed and scheduled data runs on designated business days, ensuring timely data availability in the production environment as per client requirements. Using Spark for faster data processing, creating CA7 jobs and automating the data ingestion pipeline using the CA7 scheduler.
- **Agile Practices**: Collaborated on Agile sprints using Jira to track tasks, address bugs and ensure timely delivery of development milestones.
- **Secure Data Handling:**: Used WinSCP and edge nodes to securely transfer scripts and configuration files across client environments, maintaining data integrity.

Education

Meghnad Saha Institute of Technology Kolkata, W.B

MCA *June 2021*
