PROFESSIONAL SUMMARY:

- **5+ years** of professional experience in **Web and Mobile** Application development.
- Designed and developed web and mobile applications with **Angular**, **Typescript, JavaScript**, **jQuery, JSON, HTML5**, **CSS3**, **Bootstrap**, **Cordova, NgRx**, **RxJs**, **SQL Server**, **Jasmine Karma, SIT testing, Moqups**, **Figma**.
- Hands-on experience in integrating APIs with **REST** fully performed CRUD operations by integrating APIs.
- Hands-on experience in **Typescript, JavaScript, jQuery, JSON**, **AJAX** to implement some web and mobile application features.
- Led the development of the **HDFC Smart App**, focusing on features like **Karza API** for data verification and processing, **PAN** verification, **C-KYC** and **IP** funding integration.
- Integrated various APIs and plugins, including **QR scan, Camera, Location**, and Firebase, ensuring secure and efficient application functionality.
- Experienced in implementing and managing **CI/CD** pipelines using **Azure DevOps**.
- Good exposure to each of the phases of **Agile Methodology**.
- Participate in all scrum activities such as breaking up user stories, sprint planning, production deployment and daily stand-up meetings.

WORKING EXPERIENCE:

Company	Designation	Duration
Snapwork Technologies Pvt. Ltd. Mumbai	**Software Developer**	**Jan 2024 - Aug 2025**
Kanini Software Solutions Pvt. Ltd. Pune	**Front End Developer**	**Aug 2022 - Oct 2023**
Globeminds Technologies, Pune	**UI Developer**	**May 2020 - July 2022**

TECHNICAL SKILLS:

Operating Systems	MS Windows 10/11
Tools kits	Visual Studio Code, Visual Studio, Android Studio
Web Framework	Angular 13+
Scripting Language	Typescript, JavaScript
Client–Side Technologies	HTML, CSS/SCSS, Bootstrap, AJAX, JSON, jQuery
Other	Font-Awesome, Google-Fonts, Wireframing, Figma, Moqups
Software/Tools	GitHub, Azure DevOps, GitLab, JIRA

EDUCATIONAL QUALIFICATION:

M.C.A. from Pune University, Pune.
B.C.A. from Bharati University.

PROJECT SUMMARY:

Company: Snapwork Technologies Pvt. Ltd. Mumbai **Designation – Software Developer**

1. Project: MediCard

Description:

The MediCard is an application designed for companies and institutions. The core functionality allows agents to generate proposals for specific entities. Agents can review all entered information, edit details if necessary, verify the data, and then either share the final proposal via email or download it.

Role & Responsibilities:

- Integrating data from REST APIs and displaying it on the dashboard according to the required policies.
- Creating Components, Modules, Routing, Services, Dependency Injection, Data-Binding etc.
- Collaborated on the implementation of dynamic data such as client details, plan details, summaries, and proposal generation.
- Solving Bugs while doing development.

Environment: Visual Studio Code, Angular 17, Typescript, JavaScript, RxJs, HTML, CSS, Bootstrap, Azure and GitHub.

2. Project: Bajaj Auto Lease

Description:

The Bajaj Auto Lease Portal for Bajaj Finserv is a platform that allows users to acquire assets on lease. The system will be integrated with a CRM application to store data, while the portal will be used by corporate employees to the data.

Role & Responsibilities:

- Integrated Login and Register APIs into B2C policy operations to enhance user authentication and validation processes.
- Collaborated with the team to develop major features such as NCF, Lease Calculator, Upload and Edit Quote journey, Upload Quote, Rental API, and more.
- Solving Bugs while doing development.

Environment: Visual Studio Code, JavaScript, jQuery, HTML, CSS, Bootstrap.

3. Project: HDFC Smart App

Description:

The HDFC Smart App is a comprehensive account-opening application designed to assist in opening new or existing accounts, as well as managing Re-KYC, Manipal Re-KYC and full KYC processes for customers.

Role & Responsibilities:

- Designing and implementing user interfaces that effectively display data from various APIs, ensuring a seamless user experience across multiple categories.
- Creating Components, Data-Binding, Modules, Routing, Services, Dependency Injection etc.
- Integrated QR scan native plugin for document scanning and validation.
- Worked with the Karza API for data verification and processing of documents such as Passport, Voter ID, Driving License and Aadhar card.

- Developed features for Email Verification and PAN verification, IP funding, C-KYC to ensure compliance with regulatory requirements.
- Implemented location plugin to verify customer location during account setup.
- Collaborating with backend developers to integrate and optimize API calls, enhancing the performance and responsiveness of the application.
- Conducting thorough testing and debugging to maintain high-quality standards and ensure the functionality of the frontend.
- Implemented Store and Forward functionality as part of a future enhancement to improve data reliability and system performance.
- Solving Bugs while doing development.
- Working on SIT test cases in collaboration with the IT team.

Environment: Visual Studio Code, Android Studio, Angular 15, Typescript, JavaScript, RxJs, Cordova, HTML, CSS, Bootstrap, GitLab and JIRA.

Company: Kanini Software Solutions Pvt. Ltd. Pune **Designation – Front End Developer**

1. Project: iArriveD

Description:

iArriveD application is basically used for badge printing. It is a web application as well as mobile application. In this application user create the events and according to date the badge is printed. It contains some major modules like Dashboard, Events and User Management. Internal and External users can access the application according to accessibility provided.

Role & Responsibilities:

- Understanding the Figma design and developing the application accordingly.
- Creating Components, Modules, Routing, Services, Dependency Injection, Data-Binding etc.
- Needed to write unit test cases in Jasmin with Karma framework for the code written for the development.
- Integrating APIs REST fully performed CRUD operations by integrating APIs.
- Working closely with testing team & BA for requirement gathering and understanding the exact expectation of user.
- Solving Bugs while doing development.
- Attending multiple team meetings like Bug fix issue, BA Requirement, Internal Demo, User Demo, Front-end weekly training, etc.

Environment: Visual Studio Code, Angular 15, Typescript, JavaScript, NgRx, RxJs, HTML, CSS, Bootstrap, Azure and GitHub.

2. Project: Role Reassignment

Description:

This application will be used to switch/change the role of the manager/employer and also, we can assign the project using this application. This application consists of multiple roles. Only the admin users has the access to re-assign the roles.

Role & Responsibilities:

- Create Role Reassignment Moqups screen showed & share to client.
- Analyze the software requirement by customer and develop the application as per their requirement.
- Design, build, and maintain efficient, reusable, and reliable code.
- Meeting with clients to check for the change & implementing changes.

- Participating in sprints to achieve the target of backlog data.
- Assist and support other team members on multiple projects.
- Designing the application with the help of HTML, CSS & Bootstrap.

Environment: C#.NET Blazor, Syncfusion, Visual Studio, JavaScript, HTML, CSS, Bootstrap, SQL Server, Azure & Moqups.

Company: Globeminds Technologies, Pune **Designation – UI Developer**

1. Project: Institute Management System

Description:
This product is mainly developed for the private institutes/training centers. With the help of this product training centers can manage their session schedules, student management, trainer assignments, invoices, events etc.

Role & Responsibilities:
- Creating pages or sections for the product as per client requirement.
- Using angular for creating components, Modules, Routing, Services, Data-Binding etc.
- Using bootstrap-4 for making responsive pages.
- Basic knowledge of Figma and Photoshop to get work done.
- Supporting multiple projects at the same time.
- Giving demos to the clients.
- Fixing bugs reported by QA team.
- Using PrimeNG or ngBootstrap to implement components.
- Implanting Jquery plugins if required in old projects.
- Working closely with designers to make sure whatever we have developed matches with their original design.

Environment: Visual Studio Code, Angular 13, Typescript, JavaScript, JQuery, HTML, CSS, Bootstrap Framework, Web API, Responsive Designing.

OBJECTIVE :

To pursue a challenging career, to strive for excellence and overall growth of organization as a team player and as an individual.

PERSONAL INFORMATION:

Date of Birth	15-02-1989
