M Vinodkumar Reddy

Email: mvinodkumar1202@gmail.com

Big Data Engineer **Mobile: - +91 8008627309**

Career objective:

To work in a professional and solution-oriented environment where I can get enough opportunity to continuously innovate and improve software products as well as myself, which in the long run will allow me to learn and establish processes and standards.

Professional Summary:

- Total having 6.9 years of experience in IT, 5 years of experience into **Big Data, pySpark, Hadoop, Python** and **AWS**.
- Hands-on experience on Spark- components like **Spark Streaming, Spark-Core** and **Spark-SQL.**
- Hands-on Experience on **Hadoop, Hive, HDFS** and **SQOOP**.
- Experience on Cron-tab/Airflow to run **Hive Queries/Jobs** in particular scheduling time. Experience on **HQL** and **Hive**.
- Experienced in loading dataset into **Hive** for ETL (Extract, Transfer and Load) operation.
- Capable of processing large sets of **structured** and **semi-structured** and supporting systems application architecture.
- Worked on RDBMS which are **MySQL, Oracle and SQL server**.
- Hands on Experience on **PySpark.**
- Hands-on experience on different file formats **JSON, ORC, Parquet, Avro, Delta** and **CSV.**
- Expertise in **Apache Spark & Python**.
- Experience in developing scripts in Python and **Spark-SQL** for faster testing and processing of data. Import the data from different sources like **HDFS/HBase** into **SparkRDD**.
- Having good exposer on **Spark (RDD)** and its working functionality.
- Strong Knowledge on Spark architecture and its integrations like **Spark SQL**, **Data Frames** and **Datasets API.**
- Expertise in troubleshooting the problems generated while building, deploying and also in production support.
- Experience in **Airflow** and workflow scheduler to manage Hadoop jobs by Direct Acyclic Graph (DAG) of actions with control flows.
- Team player with good Technical, Analytical and Communicational skills. Willingness and ability to easily adapt to learn any newer technology or software.

- Have excellent problem solving, time management skills, ability to work independently and under pressure and as part of a team.

TECHNICAL EXPERTISE:

Big Data	**HDFS, Hive, Sqoop, MapReduce, Spark, PySpark, Oozie, Airflow.**
Cloud	**AWS S3, RedShift**
Database	**MySQL, Oracle**
Operating System	**Linux, Windows**
Languages	**Python, SQL**

EXPERIENCE:

- Working as a Big Data Developer at **Accenture** from AUG 2018 to till now.

ACADEMIC PROFILE:

- Completed **B.Com(Commerce)** from Sri Krishnadevaraya University in 2018.

Project # 3:

Project Title : **Data Management & Governance**

Role : **Hadoop Developer**.

Environment : **Hadoop, HDFS, Hive, Spark, SQL, Python, Pyspark, Scala, AWS.**

Description:

The purpose of the project collecting the data from Credit and Debit Card from each transaction based on IOT chip which is providing transactional details.

Roles &Responsibilities:

- Developed a framework for parsing Nested XML and Json files and Load into Data Lake using Spark-Scala on various frequencies (Monthly, Daily, Weekly)
- Have actively Involved in various phases in the project like Design, Development, Testing, UAT and Production Implementation
- Involved in optimizing long running Hive ,Spark, AWS, Python,pig,sqoop jobs Involved in Exporting data from data lake to DB2, Sqlserver,Mysql.
- Involved in Discussion with Business Analysts to convert the Business specifications to Technical Specifications.

- Non-Functional Requirements such as (Volume of Data, Performance, Availability etc) are Documented for each Phase and Provided to Clients in advance to the Production Implementation
- Involved in Providing information about jobs and their frequencies to Scheduling Team After each Production Deployment.
- Created the Linked Services for various Source Systems and Target Destinations.
- Experience in using ORC files, Parquet file formats.

Project # 2:

Project Title : **Sky Communication**

Role : **Big Data Developer**.

Environment : **Hadoop, Sqoop, Hive, Spark, Pyspark, Scala, AWS.**

Description:

It provides infrastructure consultancy, facilities management, property management, and energy and healthcare services. The purpose of the project is moving to the ODS from an onpremises environment to cloud, taking advantage of the latest in data processing & data storage technologies.

Roles & Responsibilities:

- Entity/Extract logs – Requirement was to capture count of stored records for every relation and same should be visible in in a Hive table.
- Created an HDFS Shell action which should be at the end of the workflow taking in name of the pig actions as an argument and will parse the YARN LOGS and append the information to a file.
- Automated Script to check excess disk usage – Since the organization was using a shared cluster and each functional account was supposed to use not more than 10 GB of disk space on the edge node.
- Created and written business logic in spark streaming job to make the data structured way.
- Created Spark-Cassandra and Spark-HDFS Connector to store the data once data has received and made structured data.
- Created Hive tables to retrieve the data from HDFS.
- We do the functional and performance test by using MQTT lens and JMeter tool. Made a Connection from Hive to Tableau to create dashboard and Visualization and Provide the insights to higher Management to improve the business.

Project # 1:

Project Title : **EAP PEGA**

Role : **Software Engineer**.

Environment : **SQL, Hive, HDFS.**

Description:

This project is to send customer reference data from EAP to PEGA will use this customer data and apply offers to customers using the offers PEGA will collect all impressions data and share interaction history data to EAP.

Roles & Responsibilities:

- Migrating abinitio daily and Monthly graphs to pyspark as per business logics. Here Enrollment data graph is daily and performance graph is Monthly.
- Using SAS and EAP files in abinitio so same files loaded into HDFS and created schema as well.
- Reading data From EAP source after processing data by using FILTER, JOIN, SORT, DE-DUP, REFORMAT.
- (Implementing business logics), MERGE, etc. used around 25 source files in both daily and monthly process.
- Running Spark-submit command through shell script after cluster see the Job in yarn logs
- Finally loading data into Teradata
