Hemanth Kumar K A

Mobile No: 91-7997416115
E-mail:hemanthkdwh@gmail.com

Professional Summary

- Experienced Data Integration and ETL Specialist with over 8+ years of expertise in Data Warehousing, Data Migration, and ETL processes. Proficient in Informatica PowerCenter 9.x/10.x, Microsoft POWERBI, and COGNOS 10.2.
- Skilled in analyzing client requirements, designing ETL workflows, and optimizing data migration processes. Adept at resolving data quality issues and leading teams to meet project deadlines.
- Involved in identifying bugs in existing mappings by analyzing the data flow, evaluating transformations and fixing the bugs so that they conform to the business needs and redesign the existing mappings for improving the performance.
- Extensive experience in using various Informatica Designer Tools like Source Analyzer, Transformation Developer, Mapping Designer, Mapplet Designer.
- Extensively worked on Informatica Power Center Transformations such as Source Qualifier, Lookup, Filter, Expression, Router, Joiner, Update Strategy, Rank, Aggregator, Sorter, Sequence Generator, Java and Normalizer Transformation.
- Extensively worked with large Databases in Production environments.
- Worked on Data Migration from Legacy System to Amdocs System by using Informatica PowerCenter.
- Experienced in developing, designing, reviewing and documenting Informatica objects like Mappings, Reusable transformations, Sessions, Workflows and experienced in using Mapping parameters, Mapping variables, and Session parameter files.
- Experience in troubleshooting by tuning mappings, identify and resolve performance bottlenecks in various levels like source, target, mappings, and session.
- Involved in Implementing Slowly Changing Dimensions, Star Schema modeling, Snow Flake Schema Modeling.
- Excellent overall software Development life cycle (SDLC) experience, Conceptual and Logical Thinking, Goal oriented, self-motivated and able to work independently and as a member of a team.
- Experience in Leading and handled team and managing production applications promising the SLA deliveries.
- Deeply involved in the Release activities (including preparation of HLD, RDD and release documents) as a part of production releases and involved in various phases of testing in DEV, SIT and UAT with the code checkouts and check-in's using Reflection-X CCM tool.

Professional Summary:

- Worked as SENIOR SYSTEM ENGINEER in **ARTECH INFOSYSTEMS Pvt Ltd** from **Jul 2024** to **Jun 2025**
- Worked as SENIOR DATA ENGINEER in **TREDENCE** from **Dec 2023** to **Apr 2024.**
- Worked as SYSTEM ANALYST in **AMDOCS** from **Apr 2022** to **Sep 2023.**

- Worked as ETL developer (Freelance) with **MASTERWORKS** from **Sep 2021** to **Mar 2022.**
- Worked as Senior Technical Analyst with **EQUIFAX** from **Sep 2018** to **Aug 2021.**
- Worked as Software Developer with **UST Global** from **Aug 2015** to **Aug 2018.**

Educational Qualification:

- **Bachelor of Technology in Computer Science** from **Jawaharlal Nehru Technological University, Ananthapur.**

Technical Skills:

Skillset	
ETL Tool	Informatica PowerCenter 9,10.1-10.5
Report Tool	COGNOS 10.2 & POWERBI
Database	Oracle, SQL SERVER, VERTICA, TERA DATA & SYBASE IQ v15
Operating Systems	Windows and UNIX
Languages	SQL, PL/SQL
Application Tools	Pl/SQL Developer, SQL Developer, Secure CRT, PUTTY, Interactive SQL for Sybase, TOAD, AUTOMIC scheduler, DBEAVER and Control-M

Projects Undertaken:

PROJECT#1

Project Name	Privileged Identity Governance (PIG)
Role	SENIOR SYSTEM ENGINEER
Client	Artech Infosystems Pvt. LTD
Environments/Tools	Informatica, SQLSERVER, ORACLE and UNIX
Duration	Jul-2024 to Jun-2025

Project Description:

The Privileged Identity Governance tool will discover all infrastructure accounts, analyze the access they have to determine where privileged access exists, and ensure those accounts with privilege are boarded to CyberArk standard platforms for password management.
The Privileged Identity Governance (PIG) plays a crucial role in safeguarding sensitive information and systems within PNC's organization by leveraging advanced automated discovery and reporting capabilities. The expansion of PIG aims to enhance the automated discovery capabilities, enabling efficient identification of accounts with privileged access across additional platforms, and ensuring their proper management with integration to CyberArk tools. This initiative not only fortifies security measures but also streamlines existing manual processes, thereby optimizing resource utilization and reducing potential security risks.

PVS: Password Vaulting System (PVS) software enables a more secure access to passwords for accounts that carry privileged access. Such as emergency IDs., System Admin, Service IDs and application accounts. Both human and non-human includes password check in/check out functionality, reporting and other compensating controls for privilege account/access management

AAM: CyberArk Application Access Manager (AAM) is designed to provide comprehensive privileged, access, credential, and secrets management widely used application types and non-human identities. Application Access Manager secured credentials for commercial off-the-shelf applications, traditional internally developed applications, scripts, as well as containerized applications built using DevOps methodologies.

PROJECT#2

Project Name	Data Migration to AZURE COULD MSSQL
Role	SENIOR DATA ENGINEER
Client	One Reputed Investor in BFSI
Environments/Tools	SSMA, Informatica, SQLSERVER, ORACLE, UNIX and PYTHON
Duration	Dec-2023 to Apr 2024

Responsibilities:

- Leading data integration and migration efforts for Center Database.
- Designed the Mapping Technical Specifications on the basis of Functional Requirements.
- Review and analyze data from a Source System and compare to Target System.
- Developed mappings by using different Transformations like Aggregator, Lookup, Expression, Filter, Joiner, Router etc. to load the data into staging tables and then to Target Environments.
- Preparation of Low level designing as per the requirement.
- Monitored transformation processes using SSMA Workflow monitor.
- Resolving and Analyzing defect/Issues related to data which were raised by business users.
- Preparing/Mentioning Data check queries and providing the reports to Users and Legacy system.

PROJECT#3

Project Name	Bell Canada Migration
Role	SYSTEM ANALYST
Client	Bell Canada
Environments/Tools	Informatica Power Center 10.4, SQLSERVER, ORACLE, UNIX and PYTHON
Duration	Apr-2022 to Sep-2023

Description:

Bell Canada leading Canada based telecom provider, broadband leader providing advanced wireless, Internet, TV, smart home and business services over our world-class LTE and fiber networks from1975.

Responsibilities:

- Leading data integration and migration efforts for Bell Canada, a prominent telecom provider.
- Designed the Mapping Technical Specifications on the basis of Functional Requirements.
- Created ETL mappings based upon mapping document provided by stakeholder and Data Architect by using Informatica Power Center to move Data from multiple sources Like SQLSERVER, Oracle and Flat Files into a common target area such as Staging, Conversation tables and Target Tables by used Workflow Manager for Creating, Validating, Testing and running the sequential and Parallel execution of sessions.
- Review and analyze data from a Source System and compare to Target System.
- Developed mappings by using different Transformations like Aggregator, Lookup, Expression, Filter, Joiner, Router etc. to load the data into staging tables and then to Target Environments.
- Preparation of Low level designing as per the requirement.
- Monitored transformation processes using Informatica Workflow monitor.
- Resolving and Analyzing defect/Issues related to data which were raised by business users.
- Preparing/Mentioning Data check queries and providing the reports to Users and Legacy system.

PROJECT#3

Project Name	Enterprise Data warehouse for Business Intelligence
Role	ETL Developer
Client	Salam Telecommunications(ITC)
Environments/Tools	Informatica Power Center 10.5,VERTICA 11, SQLSERVER, Control-M, Windows Server and POWERBI
Duration	Dec-2021 to Mar-2022

Description:

Salam (previous ITC)leading Saudi based telecom provider offering next-generation ICT solutions for broadband, connectivity, cloud computing, managed services, security services, satellite services and internet services for government, businesses, wholesale and consumers sectors. They help businesses be smarter, more digital, more integrated and secure. They support our community in reaching new heights as a digital society.

Responsibilities:

- Contributed to data integration and ETL development for Salam Telecommunications, a leading Saudi telecom provider.
- Created ETL mappings using Informatica Power Center to move Data from multiple sources Like Flat files, SQLSERVER into a common target area such as Staging, Data Warehouse and Data Marts. Used Workflow Manager for Creating, Validating, Testing and running the sequential and parallel execution of sessions.
- Utilized SQL tools like DBEAVER to run SQL queries and validate the data loaded into the target Tables.

- Developed mappings by using different Transformations like Aggregator, Lookup, Expression, update Strategy, Joiner, Router etc. to load the data into staging tables and then to Target.
- Preparation of Low level designing as per the requirement.
- Monitored transformation processes using Informatica Workflow monitor.
- Supported the transition from flat files and SQL Server to a centralized data repository.
- Ensured data accuracy and integrity through ETL processes.

PROJECT#4

Project Name	Enterprise Data warehouse for Business Intelligence
Role	Senior Technical Analyst
Client	SNB(Saudi National Bank-Onsite)
Environments/Tools	Informatica Power Center 10.1, SYBASE IQ v15,SYBASE ASE, Oracle and COGNOS 10.2
Duration	Sept-2018 to Aug-2021

Description:

Samba Bank (SNB Bank) is one of the leading Bank in Saudi Arabia and sub branches are in Dubai, London and Qatar. We are providing retail data information to the business to take required actions for their business Growth. We are providing retail data information which are related to all types of Cards (Debit, Credit, Payroll) and POS machines, Customer related, Transaction information day to day to the business for their business growth.

Responsibilities:

- 24*7 Production batch monitoring along with the usual production and development activities.
- Ensure smooth delivery in day to day deliverables, Data load and reporting to the clients/Business.
- Involved in Requirement Gathering, design and develop packages, store procedures, configuration files, tables, views, and functions using release process.
- Implementing the production defects by testing it in DEV, SIT and UAT environments (host, pcdc, pccom) followed by the Code check-in's using CCM tool along with the accurate test cases and test results and the relevant documentation until its successful implementation in production.
- Involved in development of shell scripts that extracts the data onto file and loads the file data using the Sybase load program for incremental and full data from the STAR/MIS system.
- Developed Packages, procedure to load data into DataMart tables.
- Monitoring the file system and database health checks and Involved in raising the T110 e-forms for adding the space at mount level and increasing the DB space.
- Conducted peer design and code reviews and extensive documentation of standards, best practices, and ETL procedures.
- Developed Mappings, Sessions, and Worklets and workflows for scheduling stored procedure for daily loads using Informatica tool
- Worked on Router, Filter and Expression aggregate transformation to loading data from file to Staging & Mart tables

- Created event wait and Decisions for stage table dependency.
- Guiding Team members and Coordinating with Clients for the requirements and delivering the requirements on time.
- Involved in query tuning for reporting purpose
- Responsible for Data Load issue and defect fixes.
- Worked on Monthly activity on the data masking.
- Worked with Business, providing data, creating and scheduling/Modifying the Reports as per requirement.

PROJECT#5

Project Name	GE- Energy Zeal Warehouse
Role	ETL Developer
Client	GE- Energy
Environments/Tools	Informatica 9.6, Oracle 10g, UNIX, TOAD, TERA DATA
Duration	Aug-2015 to Aug-2018

Description:

GE Energy provides a diverse portfolio of product and service solutions and deep industry expertise to help our customers solve their challenges locally. This project integrates the Zeal data from the ERP system to the data ware house. The Zeal Data Includes Sales and Backlog data. This project provides the Zeal Data Feed to the existing reporting system, which enable the Sales and Backlog Tracking.

Responsibilities:

- Designed the Mapping Technical Specifications on the basis of Functional Requirements.
- Created ETL mappings using Informatica Power Center to move Data from multiple sources Like Flat files, Oracle into a common target area such as Staging, Data Warehouse and Data Marts of TERA DATA by used Workflow Manager for Creating, Validating, Testing and running the sequential and
- Tested the Informatica mappings with manual testing and assisted QA team.
- Used SQL tools like TOAD to run SQL queries and validate the data loaded into the Target Tables.
- Developed mappings by using different Transformations like Aggregator, Lookup, Expression, update Strategy, Joiner, Router etc. to load the data into staging tables and then to Target.
- Preparation of Low level designing as per the requirement.
- Monitored transformation processes using Informatica Workflow monitor.
