SOWMYASREE

ETL Developer

Email: sowmya.infa34@gmail.com
Phone: +91-8123325753

Professional Summary:

- Having 8+ years of experience in development and design of ETL methodology of supporting data transformations and processing in a corporate-wide-ETL solution using **IICS** and **Informatica 10.5 and in DWH skills**
- Extensively worked on developing and debugging informatica cloud and informatica power center mappings, mapplets, sessions and workflows. Extensively experience in design, coding, documentation, construction, implementation & maintenance of star schemas.
- Very good knowledge on all phases of SDLC like system analysis, application design, development, testing and implementation of data warehouse
- Hands on experience in creating/managing the mappings using various transformations like **Router, Joiner, Filter, connected and unconnected Lookup, update strategy, Sequence generator** etc.
- Extensively worked on Informatica Designer Components – **Source Analyzer, Transformation Developer, Mapplet Designer and Mapping Designer**.
- Good in dealing with Methodologies likes **Slowly Changing Dimensions.** Proven ability to manage complex project life cycle (SDLC).
- Basic Knowledge in UNIX work environment and file transfers.
- Good working knowledge in SQL, concepts of Data warehousing. Knowledge in dimensional data modeling, star schema modeling, facts and dimensions tables and logical data modeling.

- Willingness to learn new technologies and getting adapted to the new environments. Adequate communication skills.
- Worked extensively with the client requirements, customizations and part of implementation team.

Educational Qualification:

- B.Tech (Information technology) J.N.T.University Hyderabad.

Professional Experience:

- Working in Wipro Limited as a Technical Lead from July 2023 to till date
- Working in HTC Global as a senior software engineer from July 2021 to May 2023
- Worked with UST Global from Feb 2018 to July 2021
- Worked with Bhilwara Info technology Ltd from March 2016 to Feb 2018

Technical Skills:

- **ETL Tools** : IICS, Informatica Power Center 10.5
- **Databases** : Oracle10g/11g
- **Languages** : SQL
- **Other Tools** : SQL Developer
- **Operating System** : Unix

<u>Project #01</u>

- **Project Name** : ICICI Lombard General Insurance
- **Client** : ICICI Lombard

  Role : ETL Developer
- **Database** : Oracle 11g
- **Tools** : Informatica cloud (IICS)

Project Description:

ICICI Lombard General Insurance Company Ltd is a general insurance company in India. It is engaged in general insurance, reinsurance, claims and investment management. The firm offers policy insurance and renewal. It markets assurance products including car insurance, health insurance and international travel insurance. ICICI Lombard has 273 branches and 840 virtual offices spread across the nation. Established in 2001, ICICI Lombard General insurance company is a joint venture with ICICI bank.

Roles & Responsibilities:

- Understanding existing application. Based on customer view we can design the mappings in Informatica cloud (IICS).
- Requirements gathering, business analysis, documentation [functional, technical, integration documents, low-level and high-level design documents] and analyzing the requirements for better understanding.
- DWH life cycle- Requirement analysis, Design, Coding, testing and deployment.
- Developing mappings, sessions and workflows based on requirements. Worked on complex mapping and transformations to achieve complex business requirements.
- Mostly used Reusable transformations, Mapping variables and parameters, Mapplets and reusable tasks to save developer time and improved performance and execution time.
- Performing code review to identify performance defects and fixing them. Data profiling (finding anomalies hidden relations) and getting accurate picture of our data to do reverse engineering which helps us to create informatica mapping.
- Designing and executing unit test cases.
- Involved in code migration and deployment activities.
- Working on performance tuning.
- Deploying code to system testing environment.

Project #02

- **Project Name** : Power center refactorin
- **Client** : Prologis
  Role : ETL Developer
- **Database** : Oracle 11g
- **Tools** : Informatica power center

Project Description:

Data Acquisition and Control is a Data Integration hub for Risk and Finance and it's a Primary interface of Line of Business data from across the Investment bank into Risk infrastructure.

- As part of a joint venture with finance and market risk, selected feeds are delivered to VARS and FDW.
- Main goal is to provide high quality data through a consistent validation and transformation process
- Processes 6000 feeds from 60 Asset classes and legacy credit sources
- Delivers approximately 500 million data records into ODS per day
- Provides reporting capabilities which deliver data quality metrics to operations staff.

Roles & Responsibilities:

- Analyzing and developing the user requirements.
- Created mappings and workflows end to end based on requirements.
- As per LLD, HLD documents prepared mappings and sessions.
- Hands-on Oracle, SQL and UNIX.
- End to end migration for required changes as design, testing, moving code to pre-prod region.
- Mostly used Reusable transformations, Mapping variables and parameters, Mapplets and reusable tasks to save developer time and improved performance and execution time.

Project #03

- **Project Name** : PPMC
- **Client** : Dell

  Role : ETL Developer
- **Database** : Oracle
- **Tools** : Informatica 9.5.1

Project Description:

The PPM Tool is designed for business purpose that can provide to analyze and collectively manage current and proposed projects based on numerical key characteristics. PPM provide program and project managers in large, program/project-driven organizations with the capabilities needed to manage the time, resources, skills, and budgets necessary to accomplish all interrelated tasks

Roles & Responsibilities:

- Gathering and analyzing the requirements for better understanding. Performing data analysis. Developed reusable transformation, mapplets
- Involved in complete development and unit testing.
- Implemented slowly changing dimensions SCD TYPE1 and TYPE2 to maintain full history. Effectively worked on offshore onsite work model.
- Optimizing performance tuning at source, target, mapping and session level Troubleshoot problems by checking sessions and error logs. Also used debugger for complex problem troubleshooting
- Performing code review to identify performance defects and fixing them.
- Designing and executing unit test cases. Involved in code migration and deployment activities. Working on performance tuning.
