PROFESSIONAL SUMMARY

- 5 years of experience in Automation, Manual Testing (Computer Platforms & Banking Domain) and Test Automation Framework Development using **Selenium-Java** and **Katalon Studio** using groovy**.**
- Expertise in Understanding and Analyzing Test Requirements, Tracking changes and maintenance of Test Requirements.
- Well acquainted with all phases of **SDLC and STLC.**
- Strong Experience in Automating Web Application Testing using **Selenium WebDriver** with **TestNG framework**.
- Strong Experience in Java Programming, **Selenium WebDriver, JUnit and TestNG.**
- Well versed with Handling Elements in **Selenium WebDriver.**
- Writing Test cases using Element locators, **WebDriver methods, Java programming features and TestNG Annotations.**
- Executing **Selenium Test Cases** and **Reporting defects**.
- Experience in Data driven Testing, Cross browser testing and Parallel Test execution using Selenium **WebDriver, TestNG** and **Selenium Grid**.
- Expertise in implementation of **Automation framework using Selenium**.
- Knowledge and Exposure into API testing.
- Proficient in devising all the artifacts of testing such as **Test Scenarios, Test Cases, Defect Reports and Test Summary Report**
- Strong Experience in HealthCare, Insurance and Ecommerce Domains.
- Involvement in Test Estimations and Test strategy implementation.
- Proficient in devising all the artifacts of testing such as **Test Scenarios, Test Cases, Defect Reports and Test Summary Report**
- Expertise in implementation of Automation framework using Selenium.
- **Test Automation & Development:** Independently analyze existing test cases and automate new test scenarios with minimal guidance.
- **Selenium Web Driver Expertise:** Develop efficient, reliable, and maintainable automation scripts using Selenium WebDriver, ensuring robust element selection strategies.
- **Automation Frameworks:** Implement and maintain test automation frameworks using **Pytest** and **Selenium**, following industry best practices.
- Developed **automation scripts** for test execution, data validation, and reporting.
- Used Python for **API automation**, data transformations, and backend testing.
- Built **data-driven testing frameworks** using **Python** libraries such as unittest, Pytest, and selenium.
- Developed **data processing pipelines** using **Scala** with frameworks like **Apache Spark** for large-scale data handling.
- Utilized Scala for **real-time data streaming, ETL processing, and batch jobs** in big data environments.
- Integrated **PyTest with CI/CD pipelines** (Jenkins/GitLab/GitHub Actions) for continuous testing and faster feedback.
- Automated **API and backend validation** with **PyTest** and **Python**, ensuring faster defect detection.
- Automated deployment and provisioning using AWS Cloud Formation and CI/CD pipelines with Code Pipeline and Code Deploy.
- Designed and implemented **Snowflake schema** for data warehouse and BI reporting requirements.

- Improved reporting performance in BI tools (Power BI/Tableau/Looker) by leveraging star and snowflake schema best practices.
- **Databricks** integrates data engineering, machine learning, and analytics on a single platform, making ETL seamless
- Built on Apache Spark, it can handle large-scale batch and streaming ETL workloads efficiently.
- ACID transactions, schema enforcement, and time travel, ensuring data consistency and reliability in ETL pipelines.
- Used for Supporting ingestion from multiple sources (databases, APIs, cloud storage like AWS S3, Azure Data Lake, GCP buckets).
- Used in **PySpark**, **SQL**, **Scala**, R for data cleaning, enrichment, aggregation, and transformation

Education

- **Bachelor Degree in JNTUK on the flat form of mechanical Engineer in Kakinada with 63.33%.**

Projects

PAANINI INC.

Industry: Business intelligence
Company Name: CBNITS INDIA PVT LTD

Duration: Jan 2024 – April 2025
Client: JIFFY.AI
Role: Senior Automation Engineer
Project Duration: Jan 2024 – Feb 2025

Role and Responsibilities:

- Tools: Selenium with Java,**Python**, **Katalon Studio**, **SQL Database testing**, **GIT**, **TFS**& **Functional Testing**.
- Involved in Regression Testing, In-Sprint Automation and Smoke Execution.
- Participating and representing QA Team in status meetings and working closely with Dev team and other teams to meet project deadlines.
- Used **Python** for **API automation**, data transformations, and backend testing.
- Created **ETL automation scripts** for data extraction, transformation, and loading in analytics pipelines.
- Implemented **utility modules and reusable libraries** to enhance automation frameworks.
- Worked with **pandas, NumPy, and SQL integration** for validating large datasets.
- Designed and executed **automated test cases** using **PyTest** framework for functional, regression, and integration testing.
- Integrated **PyTest with CI/CD pipelines** (Jenkins/GitLab/GitHub Actions) for continuous testing and faster feedback.
- Leveraged **Scala's functional and object-oriented features** for building scalable, high-performance backend applications.
- Developed **data processing pipelines** using **Scala** with frameworks like **Apache Spark** for large-scale data handling.

- **Databricks** integrates data engineering, machine learning, and analytics on a single platform, making ETL seamless.
- **CI/CD Integration:** Implement and manage automated test execution within **Jenkins CI/CD pipelines**, handling test failures, trialing issues, and tracking resolutions.
- Wrote **type-safe, reusable, and maintainable code** by leveraging **Scala's** advanced type system.
- Collaborated in Agile teams, applying **Scala in DevOps pipelines** for build automation.
- **Version Control & Collaboration:** Work with **GitHub** for version control, including managing branches, reviewing pull requests, and ensuring code quality through pre-reviews.
- Automated **end-to-end testing workflows** using PyTest for Web, API, and Backend layers.
- Created **custom PyTest fixtures** for environment setup, test data preparation, and teardown activities.
- Worked on Partial, End to End and Regression Testing which involved analysis of scope, and execution of test cases and generating reports.
- Developed ETL/ELT pipelines to populate **Snowflake schema** structures from multiple source systems.
- Used ACID transactions, schema enforcement, and time travel, ensuring data consistency and reliability in ETL pipelines.
- Used for Supporting ingestion from multiple sources (databases, APIs, cloud storage like AWS S3, Azure Data Lake, GCP buckets).
- **Automation Frameworks:** Implement and maintain test automation frameworks using **Pytest** and **Selenium**, following industry best practices. .
- **Test Data Management:** Utilize APIs to set up test data and verify backend operations, improving test efficiency and reliability.
- Used in **PySpark**, **SQL**, **Scala**, R for data cleaning, enrichment, aggregation, and transformation
- Optimized **Snowflake schema** queries by creating indexes, partitions, and materialized views where necessary.
- Improved reporting performance in BI tools (Power BI/Tableau/Looker) by leveraging star and snowflake schema best practices
- **API Testing & Backend Validation:** Validate API responses, status codes, and integrate API testing to enhance test coverage and reduce UI automation dependencies.
- **Debugging & Issue Resolution:** Troubleshoot, analyze, and resolve test failures effectively, ensuring test stability and reliability.
- Designed and implemented scalable, secure, and highly available cloud infrastructure using **AWS** services like **EC2, S3, RDS, Lambda**, and **Cloud Formation**.
- Managed IAM roles, policies, and permissions to ensure secure access control across AWS resources.
- Monitored system performance and cost optimization using **Cloud Watch**, **Trusted Advisor**, and **AWS Cost Explorer**.

Kroger Pharmacy, Anthem Inc.

Industry: Healthcare
Company Name: **PRO ASPIRE INFOTECH PVT LTD**

Client: NTT DATA
Role: Test Engineer
Duration: April 2020 – Sep 2023

Role and Responsibilities:

- Tools: Selenium with Java, Katalon Studio, GIT, TestNG, Maven, TFS& Functional Testing.
- Proficient in **Core Java concepts** (OOPs, Collections, Exception Handling, Multithreading, Streams, Lambda expressions) for test automation development.
- Strong expertise in **Selenium WebDriver** for automating functional and regression testing of web applications.
- Strong experience in **locators strategy** (ID, Name, XPath, CSS, LinkText, TagName, Partial LinkText) and handling dynamic web elements.
- Implemented **explicit/implicit waits, synchronization techniques**, and handling of alerts, frames, and multiple windows.
- Integrated **TestNG / JUnit** for test execution, grouping, parameterization, and reporting.
- Developed complex **SQL queries**, stored procedures, views, and triggers for data extraction and manipulation.
- Performed data modeling, normalization, and schema design for efficient database structure.
- Optimized **SQL queries** and indexing strategies to improve query performance and database efficiency.
- Collaborated with BI teams to design and implement reporting solutions using SQL-based tools.
- Conducted data migration, transformation, and cleansing tasks to support analytics and reporting.
- Strong knowledge of **Python** fundamentals including OOP concepts, exception handling, file handling, and data structures (lists, sets, dictionaries, tuples).
- Experience with **Python** libraries such as **pandas**,**numpy**,**requests**,**json**,**os**, and **datetime** for scripting and data manipulation.
- Developed **Python** scripts to automate repetitive tasks, reducing manual effort and improving efficiency.
- Hands-on experience in building **REST API** test automation using **Python** with **requests** and **pytest**.
- Created data-driven automation frameworks integrating Python with tools like Selenium/BDD-Cucumber
- Additionally, understood accelQ, Katalon Studio tools quickly by taking KT from third party vendor and other team members.
- Can design and execute automated tests, manage test assets, and integrate with CI/CD pipelines (e.g., Jenkins, GitHub Actions).
- Often involves working with **ACCELQ** features like Natural Language Automation, modular test design, reusable assets, and in-sprint automation.
- Coordinating with onsite for status update and smooth development of scripts
- Participating and representing QA Team in status meetings and working closely with Dev team and other teams to meet project deadlines.
- Involved in scripts development as well as execution.

- Involved in Regression Testing, In-Sprint Automation and Smoke Execution.
- Managed complete assigned module in E2E testing with respect to all requests from Client.
- Functional SME for one major area in E2E Testing.
- Responsible for up skilling the team members by transferring automation knowledge.
