Software Engineer | Python| 4.2+ years of Experience

Name: Pavan Jain L **Email.id: lpavanjain79@gmail.com**

Mobile: +91 8050061913

OBJECTIVE

To pursue a challenging and growth-oriented career with a company having a global vision, which encourages creativity and offers an opportunity to learn and develop as a person, successful in my professional life.

EXPERIENCE SUMMARY

- 4.2+ years of experience as a Python Backend Developer, specializing in designing, developing, and maintaining scalable web and telecom applications using Python, MySQL, and PostgreSQL on Linux/Unix platforms.
- Strong expertise in backend architecture, API development (REST/FAST API/Flask/Django), and database integration with a focus on performance optimization.
- Proficient in writing clean, reusable, and efficient code following best practices, coding standards, and design principles.
- Hands-on experience in developing, deploying, and supporting backend services, database modeling, query optimization, and troubleshooting production issues.
- Skilled in version control systems like Git, GitHub, GitLab, and Bitbucket for efficient source code management and team collaboration.
- Proficient in working with development tools such as PyCharm, SQL Studio, Visual Studio, and Jupyter for efficient development, debugging, and testing.
- Experienced in Agile methodologies (Scrum) with strong collaboration skills, ensuring timely delivery of high-quality solutions within project milestones.
- Ability to work effectively under pressure, prioritize tasks, and adapt quickly to new technologies and challenging environments.

TECHNICAL SKILLS

Languages	**Python, SQL, Shell scripting**
Database	**MySQL, SQL, PostgreSQL**
Frameworks	**Django, Flask, Fast API.**
Version Control Systems	**Git, GitHub, GitLab, Bitbucket**
Tools	**PyCharm, SQL Studio, Visual Studio, Jupiter**
Operating Systems	**Linux/Unix, Windows.**

EDUCATIONAL QUALIFICATION

Bachelor of Engineering (B.E.) – Sri Revana Siddeshwara Institute of Technology, affiliated with Visvesvaraya Technological University (VTU), Bangalore.

WORK EXPERIENCE

- Currently Working with **Capgemini, Bangalore** as **Software Engineer** since June 2024 to Present
- Recently Worked with **"Intellect Design Arena LTD"** as **Consultant** since October 2022 to May 2024
- Recently Worked with **CISCO, Bangalore** as **Associate Engineer** since June 2021 to September 2022

PROJECTS

PROJECT 1

Title : Full Picture (Refinitive)
Product Domain : Landon stock exchange
Platform : Linux Ubuntu
Languages/DB : Python, SQL, Shell scripting
Role : Python Developer
Ticketing Tool : Jira

DESCRIPTION

Full picture is refinitive application used to solve the client requirements by using database and UI and used to monitor Landon stock exchange servers by configure servers with configuration management tool Ansible. we have to use ETL jobs also to convert different formats of data into particular format and then need to Automate those reports by using python and Ansible. PS (Full picture supplier) is also other application which takes care of all order details came from the client and automatically it will check the order details and It will correct as per request.

RESPONSIBILITIES

- Designed, developed, and maintained RESTful APIs and backend services using Python, Django, Flask, and FastAPI for scalable web and enterprise applications.
- Implemented database schemas, queries, and stored procedures in MySQL and PostgreSQL, ensuring data consistency, high availability, and performance optimization.
- Developed and integrated Python-based automation scripts for data processing, reporting, and system monitoring tasks.
- Deployed and managed backend services on Linux/Unix environments, leveraging shell scripting for automation and server-side tasks.
- Utilized Git, GitHub, GitLab, and Bitbucket for version control, managing feature branches, pull requests, and CI/CD workflows.
- Worked closely with cross-functional teams (Frontend, QA, DevOps) to resolve

production issues, analyze logs, and ensure seamless data flow between UI and backend.
- Actively participated in Agile ceremonies (Sprint Planning, Daily Standups, Retrospectives) and managed tasks through Jira to deliver high-quality features within deadlines.
- Ensured code quality, scalability, and reusability by following best practices, peer code reviews, and maintaining detailed documentation.

PROJECT 2

Title : Macy's & co.

Product Domain : Retail

Platform : Linux Ubuntu

Languages/DB : Python, MySQL

Role : Python Developer

DESCRIPTION

Macy's was the largest U.S. department store company by retail sales. Like Flipkart and amazon, Macy's also US based Ecom portal. In Macy's client, we used python to develop ETL jobs that extract the data and transform and insert into tables. Validations will be done on the data to publish in live site. We have to take data from database to automate python scripts.

RESPONSIBILITIES

- Designed, developed, and maintained Python-based ETL jobs to extract, transform, and load retail data into MySQL databases.
- Performed data validation and cleansing to ensure high data quality before publishing on the live e-commerce site.
- Automated backend processes and workflows using Python scripts to improve operational efficiency.
- Wrote optimized SQL queries and stored procedures to handle large datasets and improve database performance.
- Collaborated with cross-functional teams to analyse requirements, design solutions, and resolve production issues in a timely manner.
- Managed deployment and testing of backend components in Linux (Ubuntu) environments, following coding standards and best practices.
- Tracked tasks, defects, and progress using Jira in Agile sprints, ensuring on-time delivery of project deliverables.

PROJECT 3

Title	**:**	**Interactive voice response system (IVRS)**
Product Domain	**:**	**Telecom**
Client	**:**	**Airtel, Vodafone, Tata DoCoMo**
Platform	**:**	**Red Hat Enterprise Linux**
Languages/Protocols/DB	**:**	**Python, MySQL.**
Role	**:**	**Python Developer**

DESCRIPTION

In telecommunications, IVR allows customers to interact with a company's host system via a telephone keypad or by speech recognition, after which they can service their own inquiries by following the IVR dialogue. IVR systems can respond with pre-recorded or dynamically generated audio to further direct users on how to proceed. IVR applications can be used to control almost any function where the interface can be broken down into a series of simple interactions. IVR systems deployed in the network are sized to handle large call volumes.

RESPONSIBILITIES

- Developed Python modules to implement IVR call flows, menu navigation, and service logic according to telecom client requirements.
- Designed and optimized MySQL queries for managing call logs, routing tables, and customer interaction data.
- Created scripts to dynamically generate audio responses, enabling flexible IVR dialogue handling.
- Deployed and configured IVR components on Red Hat Enterprise Linux servers, ensuring stability and scalability.
- Performed functional, integration, and load testing to validate system performance under heavy call traffic.
- Troubleshot production issues by analysing logs, debugging Python code, and coordinating with network teams for quick resolutions.
- Collaborated with clients (Airtel, Vodafone, Tata DoCoMo) and internal teams to gather requirements, validate workflows, and deliver high-quality, scalable IVR solutions on schedule.
