**T Dora Babu**
**Email: souravdora49@gmail.com**
**AWS Cloud Engineer**
**Mobile: +91-8892925849**

## Profile Summary

- I have 8 years of IT experience, 5 years as an **AWS Cloud Engineer** with a strong innovative and technical background in AWS, and 2+ years as an HPC Engineer with 1.8 years of experience using CITI-HPC Monitoring and AWS Infrastructure platform support and IBM Cloud, Spectrum Symphony, and Spectrum scale.
- Hands-on experience working with AWS services like EC2, VPC, VPC Peering, S3, Cloud Watch, Route 53 and IAM, Cloud Trail, Lambda and complete understanding of security groups and route tables.
- Created NAT gateway and Instances to allow communications from the private instances.
- By using Lambda functions automated operational resources.
- launching EC2, NAT Instances, Security groups, NACL, Route tables, Internet gateway, subnets, Auto Scaling, Load Balancers in the defined virtual private connection.
- Using Route53 services for domains/sub-domains management.
- Handling multiple requests in IAM like creating users, MFA, groups and roles
- Monitor and configure all running EC2 instances through cloud watch.
- Working with S3 to create the bucket to store the object.
- Experience in using Lambda functions automate the AWS Services (like SNS, EC2, Snapshots, AMIs etc.)
- Adding template Images (AMIs) for pre-defined environments to create instances.
- Creating/modifying policies according to user's access requirement
- Monitor and configure all running EC2 instances through Cloud Watch.
- Have 2.5 year of experience on python.
- Designed and implemented **secure network architectures** in AWS and GCP, including VPC, subnets, route tables, NAT gateways, VPNs, and peering connections.
- Configured and managed **security groups, NACLs, and firewall policies** to ensure least-privilege access and compliance with organizational security standards.
- Deployed and maintained **cloud-native security tools** (AWS GuardDuty, Security Hub, VPC Flow Logs, GCP Cloud Armor, etc.) to monitor and mitigate threats.
- Implemented **Zero Trust security models**, including identity-aware proxies, multi-factor authentication (MFA), and conditional access policies.
- Automated **security compliance checks** using Terraform, Ansible, and CI/CD pipelines to enforce consistent security baselines across cloud environments.
- Conducted **network vulnerability assessments** and applied remediation strategies to strengthen cloud infrastructure against cyber threats.

- Integrated **SIEM solutions** (Splunk, ELK, AWS CloudWatch, GCP Cloud Logging) for centralized security monitoring, alerting, and incident response.
- Secured **hybrid cloud connectivity** by configuring site-to-site VPNs, AWS Direct Connect, and GCP Interconnect with encryption standards (IPSec, TLS).
- Developed **incident response playbooks** for cloud security breaches, reducing response time and improving recovery effectiveness.
- Collaborated with DevOps teams to implement **secure cloud deployments** using Infrastructure as Code (IaC) and automated security scanning tools.
- Ensured compliance with **industry standards** (ISO 27001, NIST, PCI-DSS, GDPR, HIPAA) by implementing proper cloud network controls.
- Worked with **WAF, IDS/IPS, and DDoS protection solutions** (AWS WAF, CloudFront, Cloud Armor) to safeguard web applications and APIs.
- Optimized **IAM policies and role-based access controls (RBAC)** to minimize insider threats and privilege escalation risks.
- Performed **packet analysis and forensic investigations** to identify malicious activities and improve security posture.
- Conducted **cloud security training sessions** for cross-functional teams to promote best practices in network and application security.

**PROFESSIONAL EXPERIENCE: IBM**

**==========**

- Deployed scalable, highly available, and fault-tolerant systems on AWS using Iac tool Terraform.
- Implemented robust security measures in AWS Cloud, including IAM roles and policies, VPC configurations, etc.
- Implemented AWS CloudFront as a CDN to distribute static and dynamic web content globally, resulting in a improvement in content delivery speed and user experience
- Configured and managed AWS ELB (Application Load Balancer, Network Load Balancer, and Classic Load Balancer) to distribute incoming application traffic across multiple targets, ensuring high availability and fault tolerance
- HPC Engineer with 1.8-year experience in using CITI-HPC Monitoring and Infrastructure platform support, and IBM cloud, Spectrum Symphony, and Spectrum scale.
- Experience in monitoring High-Performance Compute environments & Queue Management system.
- Designed and maintained CI/CD pipelines using Jenkins, enabling automated build, test, and deployment processes.
- Containerized applications using Docker, ensuring consistency and reliability across different development, testing, and production environments.

- Deployed and managed Kubernetes clusters using AWS EKS, enabling scalable and highly available container orchestration
- Experience in HPC Technologies such as multiprocessing, large clusters of systems, extremely large storage clusters.
- Experience in IBM Cloud Platform.

**IT Skills**
**======**

- SCM tool : AWS Services
- Monitoring Tool : Cloud Watch, Prometheus and Grafana
- Cloud Platform : AWS
- AWS Services : EC2, ELB, VPC, VPC Peering, IAM, S3, Cloud watch, ALB, , Nat gateway, Auto scaling, Terraform.
- Operating System: Windows, Linux

## Professional Experience

- Worked as an AWS Cloud & DevOps Engineer for hp , Bangalore from October_2015 to Sep_2022.
- Worked as an AWS Cloud & DevOps Engineer for IBM , Bangalore from October_2022 to Feb_2025.

## Certification

- Professional Certificate Program from IBM C1000-142-ENU: IBM Cloud Advocate v2.

## Highest Qualification

- Completed post-graduation MBA (Master of Business Administration) in 2013.

## Professional Profile

Project # 1
(October 2015 –November-2017)
Role: AWS Engineer & Application support
Client: BP (British Petroleum)

Description: BP (official styling BP , formerly The British Petroleum Company plc and BP Amoco plc) is a British oil and gas company headquartered in London, England. It is one of the world's

seven oil and gas "supermajors". It is a vertically integrated company operating in all areas of the oil and gas industry, including exploration and extraction, refining, distribution and marketing, power generation, and trading.

Role &Responsibilities

- Identified defects in application, worked with vendor and project management team
- This resulted increased efficiency in batch processing with no errors or transmissions missed and thus reduced the number of incidents.
- on a code change and new fix in upcoming Release.
- Installed applications in test environment for testing purposes.

Project # 2

Role: AWS Engineer (November 2017 – June 2019)
Client: Ciox Health
Description: Supported for the ongoing health project, a web application, which is used for internal purpose of the hospital which is located in US based client. This application is designed with micro service architecture.

Role &Responsibilities:

- Have supported on Amazon Web Services (AWS), VPC, Subnet, EC2 Instance, EBS, S3, Security Groups, NACLs, Route Tables, ALB, Auto Scaling, Cloud Watch.
- Monitoring the Application performance using Cloud Watch
- Installed Cloud Watch agents for EC2 instance for custom metrics.
- For patching and rolling updates for multiple instances, have experience on AWS SSM (Systems Manager)
- Created micro service architecture by using ALB (Application Load Balancing)
- Created IAM User, Group and IAM Role for giving suitable permissions.

Project#3

Role: AWS Engineer (June 2019 July-2022)
Client: Mapfre Insurance Company
Description: Mapfre is an US based insurance company. It is the leading insurance company in the largest non-life insurance company in Latin America.
The Company purchased Webster, Massachusetts-based Commerce Insurance Group, a major Provider of motor insurance, for over €1.5 billion in October 2007. MAPFRE was listed in the Fortune Global 500 list on its 2008 edition. In October 2010, MAPFRE acquired British travel insurance provider Insure and Go for an undisclosed sum.

Role &Responsibilities:

- Created AWS account and configure the EC2 (Elastic Compute Cloud) instance.
- Implemented the cloud watch monitoring tool and Tagging in EC2 instance in AWS.
- Automated operational resources by using Lambda function.
- Implemented the IAM's (Identity and Access Management) to create the Users, Groups, Role, Policies and Account Setting for the end users in AWS.
- Configure a set of Amazon EC2 instances that launch behind a load balancer, with the system scaling up and down in response to demand.
- Implemented the RDS (Relational Database Service) to create the databases with Multi AZ's in AWS.
- Integrating GitHub with Jenkins and Nexus in continuous integration and configured SCM with Poll SCM build trigger.
- Implemented and managed containerized applications using Docker, improving deployment efficiency and. ensuring consistent environments across development, testing, and production.
- Designed and deployed microservices architecture utilizing Docker containers and Kubernetes clusters, leading to a significant reduction in system downtime and resource optimization
- Create/Delete/Backup snapshots of Amazon EBS volumes or images (AMIs) of EBS backed EC2 instances.
- Configured and maintained Jenkins pipelines to automate the build, test, and deployment processes, resulting in faster and more reliable software releases

PROFESSIONAL EXPERIENCE: (IBM)
Project # 4 (Feb_ 2022 Feb-2025 till date)
HPC Platform Engineer
PES-CITI-HPC Project (Banking) Oct 2022 – 2025

till date

Key Deliverables:

- Working as Infrastructure Specialist will work with HPC Technologies such as multiprocessing, large clusters systems, large storage clusters.
- Monitoring CITI-HPC clusters (Compute, BareMetal) and File system performance and utilization.
- Performing troubleshooting and root cause analysis of HPC clusters and file system issues.
- Participate in Communicating/Collaborating with our team, clients, and other support teams.
- Manage both the High-Performance Compute environments & Queue Management system, including upgrades.

- Working experience on IBM Spectrum Symphony and Storage Scale product particularly in Managing multiple storage nodes, clear knowledge on operational activities of GPFS, Product Administration, monitoring of all the nodes, Configurations to Scale product, and Troubleshooting activities.
- Working in Symphony Standard reporting and DB2 reporting based on client's requirements.
- Strong knowledge of Monitoring the Applications, troubleshooting the issues such as OOM, Network related issues, storage issues.
- Working on Production Changes on weekly basis, like Rebooting, Platform changes, ITSS changes, and required environment changes.
- Provide SME support to the operation teams for escalated issue resolution and incident management.
- Good Knowledge in Linux Administration and Ansible playbooks.
- Generates reports to analyze and improve the performance of your cluster, to perform capacity planning, and for troubleshooting.
- Analyze reported issues, production outages, production logs, and customer feedback to identify ways to enhance our product as well as make support processes more effective.
- Working on RCA for any P1 & P2 reporting incident with resolution managers.
