Prasad

Cloud Data Engineer

Email: prasadcloud12@gmail.com

Phone: +91-9819075259

PROFESSIONAL SUMMARY:

- 7+ years of experience as Cloud Data Engineer in **ETL, Data warehousing, IICS, Informatica PowerCenter** projects
- Experience working related to various aspects involving Data integration and Data warehousing techniques, using ETL tools like Informatica PowerCenter, Informatica Intelligent Cloud Services (**IICS**)
- Experience integrating data to/from On - premise database and cloud-based database solutions using Informatica intelligent cloud services
- Experience working with cloud-based database solutions including AWS S3 bucket and Azure, GCP Storage and Snowflake
- Experience working with traditional on-premise database including Oracle, SQL Server and Teradata, Hadoop Hive
- Expert in all phases of Software development life cycle (SDLC) - Project Analysis, Requirements, Design Documentation, Development, Unit Testing, User Acceptance Testing, Implementation, Post Implementation Support and Maintenance
- Worked extensively with Data migration, Data Cleansing, Extraction, Transformation and Loading of data from Multiple Sources to Data Warehouse
- Instrumental in setting up standard ETL Naming standards & BEST Practices throughout the ETL process (Transformations, sessions, maps, workflow names, log files, bad files, input, variable, output ports)
- Worked with different Informatica performance tuning issues like source, target, mapping, transformation, session optimization issues and fine-tuned Transformations to make them more efficient in terms of session performance
- Experience in implementing the complex business rules by creating re-usable transformations, developing complex Mapplets and Mappings, Stored Procedure and strong experience in complex indexes, views, materialized views
- Involved in Business analysis, requirements gathering, design, development, preparing test scripts, performance improvements, conducting user training, release management and project status reporting
- Extensive Experience in SQL and Performance Tuning SQL queries in Toad and SQL developer
- Worked with heterogeneous data source like Oracle, MS SQL Server, Flat Files and XML files
- Worked Extensively in creating SCD1, SCD2, SCD3 Type mappings
- Possess strong skill of Unit Testing the ETL code
- Possess strong skill of Debugging the ETL mappings
- Knowledge on Oracle, SQL, Snowflake, Snow SQL, UNIX

TECHNICAL SKILLS:

ETL Tools	:	IICS, Informatica PowerCenter 10.x
Reporting Tools	:	Tableau, Power BI
Databases	:	Oracle, MS SQL Server, MySQL, Snowflake
Scripting Language	:	UNIX Shell Scripting
Tools/Utilities	:	SQL Developer, Toad, Citrix, Snow, Snow CLI, Jira, Putty, File Zilla, Winscp
Applications	:	MS Word, Excel, Outlook, Visio, PowerPoint
Systems	:	Windows, UNIX

EDUCATION:

- Master Of Computer Application (MCA) from V, S University.

CARREER PROFILE:

- Working as Informatica ETL Developer for CitiusTech from July 2024-Feb 2025
- Working as IICS Developer for Ascendion from May 2023-Feb 2024
- Working as IICS Developer for Mphasis from April 2021-Jan 2023
- Working as Informatica ETL Developer for Accenture from Oct 2019-Aug 2020
- Working as Informatica ETL Developer for Infosys from Aug 2017-Oct 2019

Projects#5:

Name	**:**	**Trail card**
Client	**:**	**Mercalis, USA**
Duration	**:**	**July 2024-Feb 2025**
Skills	**:**	**Informatica 10.5, Oracle, MS SQL Server, Snowflake, WinSCP, PUTTY, FileZilla, Jira**
Name	**:**	**ETL Developer**

Project Description:

Trial Card provides patient affordability, medication access and adherence, and patient support services on behalf of pharmaceutical manufacturers. healthcare providers, managed care organizations, health plans, and disease management Founded in 2000, Trial Card has connected more than 30 million patients with nearly $12 billion in branded-drug savings to date.

Roles and Responsibilities:

- Analyzed source data and gathered ETL requirements from Business users
- Extracting the Data from multiple databases like oracle, MS SQL server and Snowflake
- Developed mappings, worklets, sessions and Workflows by using Informatica power center for Loading data.
- Created new mapping and customization of the existing mappings as per requirement.
- Run Workflows in Workflow Manager to monitor the tasks.
- Preparing the Unit test document for various requirements.
- Performance tuning in Informatica mapping level, Session level and database level.
- Perform data validation Tasks after data load and identify the data mismatches.
- Responsible for Scheduling and Executing the ETL jobs in Control M.
- Finding some data issues in customized mappings by using Informatica Debugger.
- Support Expertise in Tuning the mappings and sessions to optimize the performance.
- Perform data validation Tasks after data load and identify the data mismatches.
- Extensively used transformations - Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Union Transformations
- Performance tuning various mappings, Sources, Targets and transformations by optimizing caches for lookup, joiner, rank, aggregator, sorter transformation and tuned performance of Informatica Tasks for data files by increasing buffer block size, data cache size, sequence buffer length and used optimized target-based commit interval and Pipeline partitioning to speed up mapping execution time

Projects#4:

Name	**:**	**Satander Consumer**
Client	**:**	**SC, USA**
Duration	**:**	**May 2023-Feb 2024**
Skills	**:**	**IICS, Informatica 10.4, Oracle, MS SQL Server, Snowflake, WinSCP, PUTTY, FileZilla, Jira**
Name	**:**	**IICS Developer**

Project Description:

We provide financing to transform the experience of the company's customers, delivered by multiple workstreams identified as key functional areas to support the journey transformation.

Roles and Responsibilities:

- Analyzed source data and gathered ETL requirements from Business users
- Created IICS connections using various cloud connectors in IICS administrator
- Designed, Developed and Implemented ETL processes using IICS Data integration
- Extensively used cloud transformations - Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Union Transformations
- We migrated the jobs from informatica power center to IICS environment by using Blade Bridge
- Developed complex Informatica Cloud Task flows (parallel) with multiple mapping tasks and task flows
- Designed, Developed and Implemented ETL processes using IICS Data integration
- Created IICS connections using various cloud connectors in IICS administrator
- Developed Cloud integration parameterized mapping templates (DB, and table object parameterization) for Stage, Dimension (SCD Type1, SCD Type2, CDC and Incremental Load) and Fact load processes
- Created the Detail documentation for Informatica mappings whichever already developed.
- Created the Data Flow Diagram for the Informatica ETL jobs as per Requirement.
- Create the Documentation for every mock testing history day by day How ETL jobs executes.
- Create the Runbooks for ETL jobs and monitor ETL jobs in Control M.
- Reviewing Informatica ETL mappings/workflows and SQL that populates data warehouse and data mart Dimension and Fact tables to ensure accuracy of business requirements
- Perform data validation Tasks after data load and identify the data mismatches.
- Involved in Development, Unit Testing and UAT phases of project
- Extracted data from Snowflake to push the data into Azure warehouse instance to support reporting requirements
- Performance tuning various mappings, Sources, Targets and transformations by optimizing caches for lookup, joiner, rank, aggregator, sorter transformation and tuned performance of Informatica Tasks for data files by increasing buffer block size, data cache size, sequence buffer length and used optimized target-based commit interval and Pipeline partitioning to speed up mapping execution time

Projects#3:

Name	**:**	**Lending Onbase**
Client	**:**	**FRB, USA**
Duration	**:**	**April 2021-Jan 2023**
Skills	**:**	**IICS, Informatica 10.4, Oracle, MS SQL Server, Snowflake, WinSCP, PUTTY, Jira**
Name	**:**	**IICS Developer**

Project Description:

We provide financing to transform the experience of the company's customers, delivered by multiple workstreams identified as key functional areas to support the journey transformation.

Roles and Responsibilities:

- Analyzed source data and gathered ETL requirements from Business users
- Created IICS connections using various cloud connectors in IICS administrator
- Designed, Developed and Implemented ETL processes using IICS Data integration
- Extensively used cloud transformations - Aggregator, Expression, Filter, Joiner, Lookup (connected and unconnected), Rank, Router, Sequence Generator, Sorter, Union Transformations
- Developing ETL mappings from the given requirements and unit testing them accordingly
- Performance tuning various mappings, Sources, Targets and transformations by optimizing caches for lookup, joiner, rank, aggregator, sorter transformation and tuned performance of Informatica session for data files by increasing buffer block size, data cache size, sequence buffer length and used optimized target-based commit interval and Pipeline partitioning to speed up mapping execution time
- Reviewing Informatica ETL mappings/workflows and SQL that populates data warehouse and data mart Dimension and Fact tables to ensure accuracy of business requirements
- Converting and updating the old TVN tables to BIC Snowflake tables by using Joins.
- Created the Detail documentation for Informatica mappings whichever already developed.
- Created the Data Flow Diagram for the Informatica ETL jobs as per Requirement.
- Create the Documentation for every mock testing history day by day How ETL jobs executes.
- Create the Runbooks for ETL jobs and monitor ETL jobs in Control M.
- Perform data validation Tasks after data load and identify the data mismatches.
- Writing and executing SQL Queries on SQL developer and optimizing the performance of data executing.
- Responsible for Unit Testing and Integration testing of mappings and Taskflows
- Responsible for Unit Testing and Integration testing of mappings and workflows
- Developed mappings extensively using most of the widely-used transformations, creating sessions, workflows, in a way to integrate data fetched from various remote sources/landing zones to centralized database.
- Lead the effort on data volume analysis and prepared Technical Requirement Document.
- Created separate work tables to implement transpose business functionality and effectively handled the huge volume of records transformation.
- We migrated the jobs from informatica power center to IICS environment by using Blade Bridge
- Developed complex Informatica Cloud Task flows (parallel) with multiple mapping tasks and task flows

Projects#2:

Name	**:**	**O2 Accelerate**
Client	**:**	**Telefonica, UK**
Duration	**:**	**Oct 2019-Aug 2020**
Skills	**:**	**Informatica Power Center 10.1, Oracle, MS SQL Server, WinSCP, PUTTY, File Zilla, Jira**
Name	**:**	**ETL Developer**

Project Description:

Accelerate O2 is a Digital transformation programme that will optimize Telefonica UK's operations and provide capabilities to transform the experience of the company's customers, delivered by multiple workstreams identified as key functional areas to support the journey transformation.

Roles and Responsibilities:

- Analyzed source data and gathered ETL requirements from Business users
- Extracting the Data from multiple databases like oracle, MS SQL server and Flat files
- Developed mappings, worklets, sessions and Workflows by using Informatica power center for Loading data.
- Created new mapping and customization of the existing mappings as per requirement.
- Preparing the Unit test document for various requirements.
- Performance tuning in Informatica mapping level, Session level and database level.
- Perform data validation Tasks after data load and identify the data mismatches.
- Responsible for Scheduling and Executing the ETL jobs in Crontab.
- Worked on Flat File Sources (Fixed Width and De-limited) and disparate Sources for loading the data into Target
- Performed Query Tuning (Created Volatile Tables, Indexes, Split the complex query) to resolve performance issues.
- Finding some data issues in customized mappings by using Informatica Debugger.
- Support Expertise in Tuning the mappings and sessions to optimize the performance.
- Writing and executing SQL Queries on SQL developer and optimizing the performance of data executing.
- Performed Query Tuning (Created Volatile Tables, Indexes, Split the complex query) to resolve performance issues.
- Developing ETL mappings from the given requirements and unit testing them accordingly

Projects#1:

Name	**:**	**MMIS**
Client	**:**	**Xerox, USA**
Duration	**:**	**Aug 2017- Oct 2019**
Skills	**:**	**Informatica Power Center 9.5, Oracle, MS SQL Server, WinSCP, PUTTY, File Zilla, Jira**
Name	**:**	**ETL Developer**

Project Description:

The main aim of this project is loading the data from source systems into a New Data Ware House target system called 'Medical management Information system'. We designed the system to move the source data using Complex Data process including 'members', 'provider' 'TPL', and 'finance' were converted into Informatica jobs by developing reusable maps, session and workflows in Informatica. UNIX scripts were developed to schedule the Informatica ETL jobs.

Roles and Responsibilities:

- Analyzed source data and gathered ETL requirements from Business users
- Extracting the Data from multiple databases like oracle, MS SQL server and Flat files
- Developed mappings, worklets, sessions and Workflows by using Informatica power center for Loading data.
- Created new mapping and customization of the existing mappings as per requirement.
- Preparing the Unit test document for various requirements.
- Performance tuning in Informatica mapping level, Session level and database level.
- Perform data validation Tasks after data load and identify the data mismatches.
- Responsible for Scheduling and Executing the ETL jobs in Crontab.
- Developing Informatica ETL mappings from the given requirements and unit testing them accordingly
- Performance tuning various mappings, Sources, Targets and transformations by optimizing caches for lookup, joiner, rank, aggregator, sorter transformation and tuned performance of Informatica session for data files by increasing buffer block size, data cache size, sequence buffer length and used optimized target-based commit interval and Pipeline partitioning to speed up mapping execution time
- Worked on Flat File Sources (Fixed Width and De-limited) and disparate Sources for loading the data into Target tables
- Created reusable Sessions and Mappings which helped in reducing the workload and was used across many projects.
- Worked on Work Load Manager for Monitoring & Scheduling Jobs.
- Performed Query Tuning (Created Volatile Tables, Indexes, Split the complex query) to resolve performance issues.
- Run the ETL Jobs in control m to monitor them and intimate to the onsite team
- Responsible for Unit Testing and Integration testing of mappings and Sessions, workflows
- Perform data validation Tasks after data load and identify the data mismatches.
