Mail: raghaharitha@gmail.com

PROFESSIONAL SUMMARY

- IT Professional with 8 + years of career in Informatica Data Quality, Informatica Power center, SSIS and VMware.
- Extensive experience in Data Quality using developer and analyst tool.
- Experience in Data Extraction, Data Profiling, Data Cleansing, Data Standardization and Data De-Duplication using Informatica Data Quality.
- Experience in Profiling the Data from the current Source systems and identify Data Quality rules for cleansing and standardization.
- Monitoring Data Quality dashboards w.r.t Data Quality metrics Completeness and Accuracy.
- Experience in MDM, EDC and AXON for data governance.
- Fix defects in UAT and PROD environment.
- Worked on VMware, AWS, and SSIS.
- Got certification on Microsoft Azure using AZ-900.
- Worked on scheduling tools like DAC, Autosys.
- Comprehensive knowledge in Debugging, Optimizing and Performance Tuning.
- Involved in jobs monitoring and production support with Informatica workflow manager, SQL Server Agent and IDR, DAC.
- Experienced in Source to Target Mapping (STTM / Mapping document) and preparing KT.

PROFESSIONAL EXPERIENCE

- Currently Working with Capgemini from Mar 2023 to 6th Oct 2025.
- Worked With HTC from Nov 2021 to Dec 2022.
- Worked With Wipro from June 2021 to Nov 2021.
- Worked With UNISYS from May 2017 to June 2021.
- Worked With Systech Solutions from Sep 2016 to Feb 2017.

EDUCATIONAL BACKGROUND

- Master of Technology in Electronics and Communications from JNTUA.

TECHNICAL SKILLS

● ETL Tools	:	Informatica power center, SSIS
● Data Quality tools	:	Informatica Data Quality (IDQ)
● Data Governance tools	:	EDC, AXON
● Database	:	Oracle , SQL server, Snowflake
● Cloud tools	:	AWS, VMware.

PROJECT PROFILE

Project 1:

Title : MUFG ISO

Client : MUFG

Tools : Informatica Data Quality, Oracle, UNIX, Autosys

Description:

MUFG Bank (MUBK) including US branches and Tokyo HO and other overseas branches, has been using the BESS platform application (also known as TANDEM) as a payment message processing hub connected between the SWIFT network and internal local payment applications for over 30 years. We implement different data quality checks with different data quality dimensions in form of rules and integrate them to a mapping to load to the table.

Responsibilities:

- Work with data stewards, analysts, engineers, and business stakeholders to align on data definitions and quality expectations.
- Investigate data quality issues to determine their origin and recommend corrective actions.
- Defines and enforces data quality metrics, validation rules, and transformation logic across systems.
- Worked on rules, mappings, applications, and LDOs.
- Created design documents like dim inserts, tollgates, DSR docs.

Project 2:

Title : Nissan Motors DW

Client : Nissan Motors

Tools : Informatica Data Quality, Oracle, Snowflake, EDC, AXON

Description:

Nissan Motor Co., Ltd. is a Japanese multinational automobile manufacturer headquartered in Nishi-ku, Yokohama, Japan. The company sells its vehicles under the Nissan, Infiniti, and Datsun brands. The company traces its name to the Nissan zaibatsu, now called Nissan Group.

Nissan Motor Co., Ltd maintains the data of the products and customers in three different zones i.e, Raw, Clean and Derived. We provide profiles, rules on profiles and score card on customer data. We implement different data quality checks with different data quality dimensions in form of rules and integrate them to a mapping to load to the table.

Responsibilities:

- Profiling the Data from the current Source systems and identifying Data Quality rules for cleansing and standardization.
- Created rules in developer for DQ checks and score cards.
- Working with EDC and AXON for data governance activities.
- Creating Rule Specs and Rules from Analyst Console.
- Responsible for Data Cleansing, Data Standardization.
- Creating and deploying Applications, workflows, mappings, mapplets and LDO's with different source tables.

Project 3:

Title : Edwards Health Care System

Client : **Edwards**

Tools : **IDQ, EDC, AXON, Oracle, UNIX**

Description:

Edwards Health Care Services (EHCS) has been lighting the way of direct-to-home, high quality medical products, diabetes supplies and breast pumps. For more than 25 years, they have been lighting the way to better health. They provide their customers with personalized service, easy order, online account management and products delivered directly to their door.

Edwards Health Care System maintains the data of the products and customers in three different components as product, Master and supplier. We implement different data quality checks with different data quality dimensions in form of rules and integrate them to a mapping to load to the table. Also we are working on POC of fuzzy matching for the customer data. Also we implement the profiles and score cards to check the data quality.

Responsibilities:

- Created rules in developer for DQ checks and score cards.
- Working with EDC and AXON for data governance activities.
- Creating Rule Specs and Rules from Analyst Console.
- Responsible for Data Cleansing, Data Standardization.
- Creating and deploying Applications, workflows, mappings, mapplets and LDO's with different source tables.
- Worked on POC of fuzzy matching, address validation

Project 4:

Title : KOLEA – KALO DW

Client : **State of Hawaii - Department of Human Services**

Tools :**IDQ, Informatica, Oracle, UNIX**

Description:

Benefit, Employment & Support Services Division (BESSD) is the largest division in the Department of Human Services for HAWAII, provides clients with monthly benefits that supplement such essentials as food, shelter, and child care, as well as employment support and work training, and dependency diversion and prevention. HI DHS KOLEA Project is enterprise-level initiative to address modernization of programs involving Health Services, Social Services and Family Services.

KOLEA is county run social service program in HAWAII. KOLEA system is a core tool used by the case worker to determine eligibility, benefit calculation and issuance of an individual who have opted for different social service programs and issues the benefit to the individual and send the correspondence messages based on the service program which they have opted for.

KOLEA – KALO DW maintains the data of the programs and eligibilities and claims.

Responsibilities:

- Profiling the Data from the current Source systems and identifying Data Quality rules for cleansing and standardization
- Responsible for Data Cleansing, Data Standardization.
- Creating and deploying Applications, workflows, mappings, mapplets.
- Performing Data De-Duplication using Informatica Developer.
- Monitoring and fixing defects in UAT and PROD environment.

Project 5:

Title **: CALWIN BI EDW**

Client : **State of California**

Tools : **Informatica, Oracle, UNIX**

Description:

CalWIN (CalWORKs Information Network) is an online, real-time computer program that supports the administration of public assistance programs in California and has been used in 18 California counties since 2005. CalWIN runs eligibility and benefit determinations and case maintenance, application registration, and statistical reporting functions. The programs involved are: Cash Assistance Programs, Food Assistance Programs and Medical Assistance Programs. CalWIN is county run social service program in California. CalWIN system is a core tool used by the case worker to determine eligibility, benefit calculation and issuance of an individual who have opted for different social service programs and issuesthe benefit to the individual and send the correspondence messages based on the service program which they have opted for.

Responsibilities:

- Creating and executing Applications, workflows, mappings, mapplets.
- Profiling the Data from the current Source systems and identifying Data Quality rules for

cleansing and standardization

- Monitoring Data Quality dashboards w.r.t Data Quality metrics.
- Performing Data De-Duplication using Informatica Developer.
- Maintained standard documentation and templates related to development.
  Prepare unit test cases and perform unit testing effectively.

Project 6:

Title : HCG Sales

Client : Hain Celestial Group

Tools : Informatica, SQL Server, BO, SSIS

Description:

The **Hain Celestial Group** is an American food company whose main focus is food and personal care products. It is a leading organic and natural products company. Their products range from herbal teas offered through their Celestial Seasonings brand, to chickens from the Free Bird brand. The headquarters is in Lake success, New York, United States with operations in North America, Europe and India. Hain has built and deployed a Data warehouse platform to deliver BI Reporting to management, users and selected customers. The Business Objects BI platform is being used to generate reports and dashboards. Systech provided support and ongoing enhancements for both their ETL and Reporting environments.

Responsibilities:

- Extracting, Transforming and Loading the data from Source to Target mappings using various transformations like update strategy, lookup, Router, Filter, sequence generator, joiner, aggregate transformation and expression.
- Prepared Unit test cases for the mappings.
- Fixing the issues if any failures in the production load.
- Worked on the enhancement of Universes in BO at reporting end by adding the new dimensions and measures according to the requirement of client and generated WEBI reports.
- Worked on STTMs

.
