Resume – Saibhavani Palla

Bengaluru, India | 9573802701 | saibhavanipalla308@gmail.com

Profile Summary

- Python & Linux Engineer with **4 years of experience** in **automation, backend services, and Linux system administration**.
- Strong expertise in **Python scripting** for automation, API development, log parsing, data processing, and system monitoring.
- Skilled in **Linux environments** including **Red Hat Enterprise Linux (RHEL) and SUSE Linux Enterprise Server (SLES)**.
- Proficient in **disk layout and storage management** with Logical Volume Manager (LVM).
- Expertise in **Linux system administration tasks** such as user management, permissions, process monitoring, cron jobs, and package management.
- Experienced in working with **monitoring tools** like Tivoli, BMC Patrol, and Netcool for enterprise infrastructure.
- Hands-on experience with **incident management and change management processes** under ITIL standards.
- Skilled in **ticketing tools** such as BMC Remedy and ServiceNow for production support and workflow tracking.
- Developed **Flask/Django-based APIs** and deployed them on Linux servers using Gunicorn, Apache, and Nginx.
- Familiar with **TCP/IP networking protocols, FTP, SSH, Telnet, SCP, and RSH** for secure communication and server connectivity.
- Worked with enterprise-grade **hardware platforms including IBM, HP, Dell, and Oracle servers**.

- Expertise in **cloud deployment** with AWS (EC2, S3, ECS), containerization with Docker, and orchestration with Kubernetes.
- Automated **system monitoring tasks** using Python scripts and shell scripting in Linux.
- Integrated **Linux-based monitoring alerts** with Python + Prometheus exporters.
- Experience in **banking and insurance domains**, delivering automation and backend solutions for mission-critical systems.
- Automated **daily reconciliation reports, data migrations, and batch processes** using Python.
- Strong knowledge of **log management tools (ELK, Splunk)** for analyzing Linux server logs.
- Implemented **role-based access, authentication, and security hardening** for Linux servers and APIs.
- Skilled in **Python testing frameworks** (pytest, unittest) for automation and system validation.
- Designed **data pipelines and schedulers** with Python & Linux cron jobs.
- Worked with **MySQL, PostgreSQL, MongoDB, and Redis** in Linux-based environments.
- Implemented **backup, restore, and disaster recovery scripts** for Linux systems.
- Familiar with **cloud-native development and CI/CD** using Jenkins, Git, and container registries.
- Delivered **99.9% uptime systems** for insurance and banking automation.
- Experienced in **multi-tier deployments** on Linux (Web, App, DB layers).
- Wrote **Python scripts for network monitoring** (ping, TCP/UDP connectivity, port scans).
- Implemented **audit trails and compliance workflows** for banking and insurance systems.

- Automated **security patching and package updates** in Linux with Ansible + shell scripts.
- Strong debugging skills using Linux commands like **grep, awk, sed, journalctl, netstat, top, htop, df, du**.
- Participated in **incident resolution, root cause analysis, and preventive actions** in production.
- Worked in **Agile/Scrum teams**, collaborating with cross-functional developers and infra engineers.
- Known for **reducing manual effort by 40%** with Python + Linux automation.
- Created **knowledge base documentation** for Linux procedures and automation scripts.
- Mentored juniors in **Python scripting and Linux troubleshooting**.
- Delivered projects with **zero critical issues in production** and ensured **security compliance**.
- Recognized for **process automation, infrastructure stability, and cost reduction initiatives**.
- Adept at **troubleshooting application + OS layer issues** in production Linux environments.
- Strong communicator with **client-facing experience** in insurance and banking projects.

Professional Experience

Python/Linux Developer – LTI Mindtree

Jul 2025 – Oct 2025 (4 months)
Project: Insurance Claim Automation – *Client: Prudential Financial (US)*

Roles & Responsibilities (30 points):

- Developed **Python scripts** to automate insurance claim validations and settlements.

- Built **Flask APIs** for claim management deployed on Linux servers.
- Automated **report generation & scheduling** using Linux cron jobs.
- Created **log parsing scripts** for claim status tracking.
- Integrated **third-party payment gateways** for automated settlements.
- Used **Red Hat Linux servers** for deployment and monitoring.
- Configured **LVM for storage allocation** of claim data.
- Monitored servers with **Tivoli and BMC Patrol** dashboards.
- Logged incidents and tracked issues via **ServiceNow**.
- Automated **file transfers with FTP, SCP, and SSH**.
- Implemented **security patches on Linux servers** as per audit.
- Developed **error-handling scripts** for failed claim jobs.
- Deployed APIs with **Gunicorn + Nginx** on Linux.
- Configured **backup scripts** for policy/claim data.
- Ensured **99.9% uptime** with proactive monitoring.
- Documented technical flows and automation steps.
- Supported **incident management** under ITIL procedures.
- Coordinated with QA for automated testing.
- Delivered secure & scalable system on time.
- Provided **L2 production support** for insurance workflows.
- Optimized queries for faster claim processing.
- Assisted in **change management cycles**.
- Debugged production issues with Linux commands.

- Automated **archival of old claim records**.
- Delivered **zero-defect releases**.
- Participated in **daily client calls** for updates.
- Ensured compliance with insurance regulations.
- Migrated manual claim workflows to automation.
- Created internal **knowledge base** for Linux support.

Python/Linux Engineer – Kapital Information Technologies Pvt Ltd

Nov 2022 – Jun 2025 (2 years 8 months)
Project: Digital Banking Automation – *Client: State Bank of India (SBI)*

Roles & Responsibilities (30 points):

- Developed **Python microservices** for banking automation tasks.
- Automated **daily transaction reconciliation** with Python + Linux scripts.
- Managed deployments on **Red Hat Linux servers**.
- Implemented **batch jobs with cron** for loan and fund processing.
- Wrote **network monitoring scripts** (TCP/IP connectivity, SSH tests).
- Integrated APIs with **core banking systems**.
- Configured **LVM for database storage** expansion.
- Implemented **Kafka consumers** for transaction logs.
- Used **Netcool for real-time banking alerts**.
- Tracked incidents with **BMC Remedy tool**.
- Deployed APIs on Linux with **Docker & Kubernetes**.

- Conducted **performance tuning** to optimize API latency.
- Automated **server monitoring dashboards** using Python.
- Implemented **secure file transfers** with SCP & RSH.
- Worked with **PostgreSQL & MongoDB** for DB operations.
- Built **audit logging modules** for compliance.
- Assisted in **incident and change management cycles**.
- Worked closely with QA for **pytest automation**.
- Monitored hardware utilization on **Dell/HP servers**.
- Configured **Nagios alerts** for transaction failures.
- Delivered **stable & scalable banking workflows**.
- Documented automation scripts for reusability.
- Reduced manual effort by 35% with scripts.
- Participated in **client demos & UAT**.
- Conducted **root cause analysis** for production failures.
- Implemented **Linux-based security hardening**.
- Deployed updates via Jenkins CI/CD pipelines.
- Supported production with 24/7 availability.

Associate Engineer – GlobalLogic

Mar 2022 – Oct 2022 (8 months)
Project: Healthcare Data Automation – *Client: Philips Healthcare*

Roles & Responsibilities (30 points):

- Built **Python scripts for patient record automation**.
- Deployed services on **SUSE Linux servers**.
- Automated **data migration from legacy systems**.
- Developed **Flask APIs** for patient portals.
- Configured **LVM storage** for healthcare records.
- Implemented **backup & restore jobs** in Linux.
- Used **FTP/SSH** for secure data transfers.
- Integrated APIs with **medical devices**.
- Configured **BMC Patrol alerts** for system monitoring.
- Logged incidents on **ServiceNow** for healthcare workflows.
- Automated **CSV/Excel parsing** for medical reports.
- Monitored Linux processes with **htop & journalctl**.
- Supported **HIPAA compliance automation scripts**.
- Assisted QA with automated testing scripts.
- Implemented **Linux security patches**.
- Automated **reminder notifications** with Python.
- Conducted **system health checks** via shell scripts.
- Participated in **Agile/Scrum ceremonies**.
- Delivered **secure & stable healthcare modules**.
- Provided **24/7 production support**.
- Wrote **unit tests with pytest**.
- Configured **service monitoring scripts**.

- Documented system automation flows.
- Assisted in **Linux performance tuning**.
- Resolved incidents under ITIL guidelines.
- Delivered modules within timelines.

Education

B.Tech in Electronics and Computer Engineering
PVKK Institute of Technology, Anantapur (2017 – 2022)

Key Skills

- **Programming & Automation:** Python (Flask, Django, Pandas, NumPy), Bash/Shell scripting
- **Operating Systems:** Red Hat Enterprise Linux (RHEL), SUSE Linux Enterprise Server (SLES)
- **Disk Layout & Storage:** Logical Volume Manager (LVM), Backup & Restore, Disk Partitioning
- **Monitoring Tools:** Tivoli, BMC Patrol, Netcool, Nagios, ELK, Splunk, Prometheus
- **Ticketing Tools:** BMC Remedy, ServiceNow
- **Protocols:** TCP/IP, FTP, SSH, Telnet, SCP, RSH
- **Hardware Expertise:** IBM, HP, Dell, Oracle Servers
- **Cloud & DevOps:** AWS (EC2, S3, ECS), Docker, Kubernetes, Jenkins, Git
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **ITIL Procedures:** Incident Management, Change Management, Problem Management

- **Other Skills:** Agile Scrum, System Security Hardening, Automation Frameworks, Client Communication
