---

Professional Summary

Data engineering specialist with 4 years of experience in ETL pipeline development, cloud migration, and data security, focusing on delivering impactful solutions in the healthcare sector. Skilled in Python, Snowflake, and DataBend, with expertise in optimizing data ingestion, transformation, and validation. A collaborative problem-solver dedicated to efficient and scalable data platform solutions.

Experience

Happiest Minds Technologies
Data Engineer **Jan 2024 – Sept 2025**

- Migrated ETL data pipelines, including those handling appointment and patient-related data, from Snowflake queries to Databend queries, ensuring optimized performance and smooth migration.
- Implemented integration and unit test cases using pytest and unit tests in Python, achieving 95% test coverage for the entire ETL pipeline.
- Designed, developed, and orchestrated ETL workflows using Apache Airflow DAGs in Python, with dependency management, retries, and monitoring.
- Built Python-based data transformation scripts for ETL pipelines, integrating with Databend, Snowflake, and external APIs.
- Designed, developed, and optimized complex SQL queries to efficiently extract, transform, and retrieve data from multiple source systems for reporting, analysis, and downstream processing.
- Implemented SQL scripts for data quality checks and data validation.
- Deployed and managed the codebase in Jenkins using Kubernetes, ensuring seamless CI/CD workflows by automating build, test, and deployment processes.
- Worked extensively on AWS cloud services (S3, EC2, EKS, IAM, Lambda, CloudWatch) to store raw files, manage compute resources, and integrate with ETL workflows in Airflow and Databend.

Associate Data Engineer | Oct 2021 – Dec 2023

- Designed and implemented data ingestion pipelines using Python, AWS S3, Snowpipe, and Snowflake for handling Protected Health Information (PHI) data.
- Built ELT pipelines for data ingestion and transformation, standardizing raw data into payload formats in Python and stored efficiently in Snowflake VARIANT columns.
- Implemented cloud migration strategies to hybrid environments, optimizing Snowflake queries with indexing, clustering, and query tuning, reducing runtime by 88%.
- Developed SQL scripts for data quality checks and data validation. Implemented Integration test cases and unit test cases in Python, achieving 95% test coverage for the entire ETL pipeline
- Collaborated with AWS services (S3 for ingestion, EC2 for compute) to modernize pipeline workflows.

Skills & Interests

- **Programming and Development**
  - Python, SQL, Git and GitHub.

- **Cloud and DevOps**
    - AWS S3, ECR, KMS, CloudWatch, Octopus deploy, GitHub Actions, Jenkins, Kubernetes.

- **Data Engineering**
    - Snowflake, Airflow, Pandas, Data warehousing, Data bend.

Education

Acharya Institute of Technology **Bengaluru**
Master of Computer Applications: 2016-2019
