Abdul Khaleed Shaik

Data Engineer

Bengaluru, India | +91-9705073597 | shaikkhalidkdp@gmail.com | LinkedIn

---

Professional Summary:

Data Engineer with 4.5 years of experience in designing and optimizing data pipelines using Python, PySpark, SQL, and Google Cloud Platform (GCP). Skilled in ETL processes, data migration, and quality assurance, with a proven track record in performance improvement. Recognized with Kudos Awards for innovation and milestone achievements.

Skills:

- Big Data Technologies: Hive, Hadoop, PySpark
- Programming Languages: Python, SQL, Unix Shell Scripting
- Cloud Technologies: Google Cloud Platform – BigQuery, Dataproc, Cloud Storage
- Databases: Teradata, Salesforce SOQL
- Tools: Dell Boomi, Control-M, UC4, GitHub, BitBucket

Work Experience:

Engineer - Data Engineering
Altimetrik - PayPal, Bangalore — Feb 2024 - Apr 2025

- Developed and deployed robust ETL pipelines to extract data from Salesforce SOQL and load into BigQuery using Dell Boomi.
- Automated job scheduling and monitoring through UC4, ensuring seamless end-to-end integration.
- Enhanced existing codebase, achieving a 15% reduction in overall data processing time and cost.
- Implemented SQL-based data quality checks to ensure high data integrity across ingestion layers.
- Managed schema updates in BigQuery based on evolving stakeholder requirements.
- Addressed and resolved historical data inconsistencies through comprehensive data rewriting and cleansing efforts.
- Managed code versioning and deployment using GitHub and Jenkins for continuous integration and delivery.

Tech Stack: BigQuery, Dell Boomi, PySpark, SOQL, Jupyter, UC4, GitHub, Jenkins

Senior Software Engineer - Data Engineer
Mphasis - Charles Schwab, Bangalore — Feb 2021 - Feb 2024

- Led the end-to-end migration of the Integrated Data Warehouse (IDW) and Big Data Hub (BDH) to a Cloud Data Warehouse (CDW) on Google Cloud Platform (GCP), including strategy development, planning, and execution for ETL source systems.
- Designed a custom ETL framework to migrate over **500 million customer records (975 PB)** from Teradata and Hive to BigQuery , a globally unprecedented migration scale.
- Built and managed Python-Unix based pipelines for migrating data from HDFS to Google Cloud Storage, leveraging **Hadoop DistCp** and **gsutil** for large-scale, high-speed transfers.

- Collaborated with cross-functional teams to troubleshoot data discrepancies, coordinate schema mapping, and optimize ETL workflows across development and production.
- Applied advanced performance tuning techniques such as data staging, chunking, and parallelized loading to reduce pipeline execution time by **20%**.
- Established rigorous SQL-based data validation frameworks to enforce schema consistency, data quality, and exception handling during migration.
- Created a Unix-based housekeeping automation framework for NAS servers to maintain optimal load balancing and storage hygiene.

Tech Stack: Hive, Teradata, PySpark, GCP (BigQuery, Dataproc, GCS), Control-M, Python, Unix Shell Scripting, BitBucket

---

Education:

Annamacharya Institute of Technology and Sciences — Kadapa
Bachelor of Technology in Electrical and Electronics Engineering — Jun 2016 - Jul 2020

- CGPA: 7.92

Achievements:

- Kudos Award for milestone contribution, Mar 2023.
- Kudos Award for innovation and learning agility, Jun 2023.
