Profile Summary

- **Data Engineer with 4+ years of IT experience**, including **3+ years in Azure-based Data Engineering**.
- Expertise in **designing and building scalable pipelines** using **Azure Databricks (PySpark), Azure Data Factory, Azure SQL Database, Azure Blob Storage, and ADLS Gen2**.
- Strong proficiency in **Python, PySpark, SQL,** with in-depth knowledge of **Spark Core, Spark SQL, DataFrames, Driver/Executor architecture, partitioning, and schema evolution**.
- Experienced in **Medallion Architecture (Bronze–Silver–Gold)** with **Delta Lake** for scalable, governed data Lakehouse solutions.
- Designed **metadata-driven ETL frameworks** for dynamic orchestration, ensuring **reusability, auditability, and maintainability**.
- Proficient in **real-time and batch data processing, complex transformations, performance optimisation, and handling structured & semi-structured data** (JSON, Parquet, CSV, ORC).
- Skilled in **visualisation and reporting tools** – **Power BI, Tableau, Looker Studio** for delivering actionable business insights.
- Experienced in **data governance, RBAC security, monitoring (Azure Monitor), and CI/CD deployment pipelines** using **Azure DevOps & Git**.

EDUCATION

M.Tech, *The National Institute of Engineering* 2017

B.E, *Vidyavardhaka College of Engineering* 2015

SKILLS

Cloud
Azure (ADF, Databricks, ADLS Gen2, Blob Storage, Delta Lake, Synapse Analytics, Key Vault, Azure Functions)

Programming Languages
Python, PySpark, SQL

Data Security
RBAC, Encryption, Masking Policies

Visualisation
Power BI, Tableau, Looker Studio

Database
Azure SQL, MySQL, PostgreSQL, Snowflake

Data Engineering
ETL/ELT, Medallion Architecture, Delta Lake, Data Modelling

DevOps & Tolls
Git, Azure DevOps, CI/CD, Azure Monitor

WORK EXPERIENCE

Project 1: Real-Time Inventory and Sales Tracking System

Client: Wayfair | **Domain:** E-Commerce | **Duration:** Sep 2023 – Present

Tech Stack: Azure Databricks (PySpark), ADLS Gen2, Synapse Analytics, Azure Functions, Delta Lake, Azure RBAC, Python, SQL, Spark

Project Overview: Developed a **near-real-time inventory & sales tracking platform** for Wayfair suppliers to **monitor stock availability, sales performance, and product movement** across multiple sources.

Responsibilities:
- Built **near-real-time PySpark pipelines** in Databricks for supplier sales and inventory ingestion.
- Applied **graph-based techniques and hashing** to optimise Spark jobs and reduce lookup times.
- Designed **supplier-facing APIs using Azure Functions** for stock updates and notifications.
- Modelled **Delta Lake tables** for ACID-compliant, incremental, and historical sales tracking.
- Developed **optimised SQL queries in Synapse Analytics** for business KPIs.
- Automated **orchestration with Databricks Jobs** (logging, error handling).
- Enforced **Azure RBAC policies** with encryption & masking for sensitive data.
- Enabled **self-service analytics** for suppliers via curated datasets in Synapse.

Project 2: Centralized Data Warehouse for Business Analytics

Client: Muthoot Fincorp One | **Domain:** FinTech | **Duration:** Jan 2023 – Sep 2023

Tech Stack: ADF, Databricks (PySpark), ADLS Gen2, Synapse Analytics, Azure SQL Database, Azure Monitor, Power BI

Project Overview: Built a **centralised Azure data warehouse** integrating **financial, sales, and operational data** to provide a **single source of truth for business KPIs** and cross-functional analytics.

Responsibilities:
- Developed **ADF pipelines** for ingestion from **core banking, CRM, call centre, and mobile apps**.
- Designed a **scalable warehouse in Synapse** for unified analytics and reporting.
- Applied **PySpark transformations** in Databricks to cleanse, normalise, and aggregate.
- Built **SQL models in Azure SQL DB** for Power BI dashboards (revenue, funnel metrics).
- Implemented **rule-based payout logic,** improving financial accuracy.
- Delivered **product-level insights** (Digital Gold, Forex, Loans) for adoption tracking.
- Applied **monitoring with Azure Monitor** for data freshness and SLA compliance.
- Collaborated with **marketing & operations** teams for actionable KPIs.

Project 3: Gift Card Coupon Analytics & Optimisation

Client: Amazon Development Centre | **Domain:** E-Commerce | **Duration:** Jun 2022 – Dec 2022

Tech Stack: Databricks (PySpark), ADLS, Synapse Analytics, Azure Functions, Delta Lake, Azure RBAC, Python, SQL

Project Overview: Built an **analytics platform to track Amazon gift card coupon redemptions**, enabling marketing teams to **measure campaign ROI, reduce misuse, and improve customer engagement**.

Responsibilities:
- Built **PySpark ETL pipelines** for coupon & transaction data ingestion from ADLS.
- Modelled **Delta Lake tables** to maintain redemption history with ACID compliance.
- Developed **complex SQL queries in Synapse** to track redemption, spend uplift, and ROI.
- Created **Azure Functions** for anomaly alerts and coupon expiry notifications.
- Secured platform access with **RBAC & masking of PII data**.

- Designed **Synapse views for stakeholder access,** supporting self-service analytics.
- Optimised **Spark pipelines with partitioning and caching** for faster execution.

Project 4: Near Real-Time E-Commerce Operations Analytics

Client: Ola Foods | **Domain:** E-Commerce Operations | **Duration:** Oct 2021 – Jun 2022

Tech Stack: Databricks (PySpark), ADLS Gen2, Synapse Analytics, Azure Functions, Delta Lake, Azure RBAC, Python, SQL, Spark

Project Overview: Built a **near-real-time analytics platform** to track **order fulfilment, delivery performance, and logistics** for Ola Foods, reducing delivery breaches and optimising stock levels.

Responsibilities:
- Designed **near-real-time PySpark pipelines** for order & logistics data.
- Modelled **Delta Lake tables** for audit-ready order & delivery traceability.
- Created **SQL views in Synapse** for delivery accuracy and turnaround KPIs.
- Developed **Azure Functions** for order delay & stock depletion alerts.
- Applied **RBAC policies** to secure logistics & customer-sensitive data.
- Collaborated with **business stakeholders** for operational intelligence.
- Reduced delivery breach percentage by **15% through proactive alerts**.

Project 5: FMCG Inventory & Catalogue Management

Client: EDLP Retail Solutions | **Domain:** FMCG / Retail | **Duration:** Jul 2020 – Aug 2021

Tech Stack: Databricks (PySpark), ADLS Gen2, Synapse Analytics, Delta Lake, Azure Functions, Azure RBAC, Python, SQL

Project Overview: Built a **centralised FMCG inventory & catalogue management platform** to ensure product consistency and streamline supply chain analytics.

Responsibilities:
- Built ingestion pipelines for **ERP & supplier product data** using Databricks.
- Developed **PySpark transformations** to clean & unify catalogue SKUs.
- Modelled **Delta Lake tables** for historical inventory traceability.
- Built **Synapse SQL views** for stock turnover & availability reporting.
- Automated validations & error handling with **Azure Functions**.
- Applied **ABC analysis** using Python for stock optimisation.
- Delivered insights to **supply chain teams for stock allocation**.

Courses and Certifications

Master of Data Science, *Deakin University* 2025

Data Visualization and Story Telling Using Tableau, 2023
DCAL and Analytics Society of India, IIM B

Visualizing with QuickSight, *AWS Training and Certification* 2022

Post Graduate Program in Data Science, *University of Austin* 2020
