Amith C

Email: amithchannabasappa@gmail.com **Mobile**: +91 9742677058

PROFESSIONAL SUMMARY

- ✓ Around 4+ years of experience in **Python** development specializing in **Django, Flask** and **FastAPI** for building scalable web applications.
- ✓ Experience in Application Development and Object-Oriented Programming Analysis and Design.
- ✓ Having strong object-oriented programming (**OOP**) concepts using Python.
- ✓ Experienced in working with various Python Integrated Development Environments like VS code and PyCharm.
- ✓ Experienced in working an agile development environment.
- ✓ Proficient in SQL databases **MySQL, PostgreSQL**.
- ✓ Hands-on experience in unit testing, integration using Pytest and unittest frameworks.
- ✓ Experienced with **Git** for version control and code review process.
- ✓ Experienced with Azure services such as Blob storage, SQL database, Logic Apps and Function Apps.
- ✓ Hands-on experience in using **Postman** and **Swagger** to test the APIs.
- ✓ Self-motivated individual with strong analytical and problem-solving abilities.
- ✓ Proactive, Dedicated, interested in learning new technologies.

TECHNICAL EXPERTISE

Programming language	Python
Database	MySQL, PostgreSQL
Frameworks	Django, Flask, FastAPI
Web Technologies	HTML, CSS, JavaScript
Microservices	Asynchronous processing (Celery, RabbitMQ)
Tools	VS code, PyCharm, Docker, GitHub, Bitbucket, Jira
Cloud	Azure
Operating System	Linux, Windows

PROFESSIONAL EXPERIENCE

- ➢ Working in **UST** , Bangalore as **Product validation Engineer** from Nov 2020 to till date.

- **PROJECT 1:**

Project Title : **FuelSync**
Client : **Green Line, UAE**
Role : **Python Developer**
Technologies : **Python, Flask, MySQL, Azure, Pandas, Git, GitHub, unittest, RestAPIs**

PROJECT DESCRIPTION:

FuelSync is designed to digitize daily operations and enable a centralized command system using IoT technology. The platform ingests raw pump transaction data, processes it with pandas, reconciles mismatches, and provides real-time dashboards to management.

RESPONSIBILITIES:

- Developed the application using Flask framework, with Python and Pandas for data manipulation.
- Deployed code using Azure pipelines and releases into App service.
- Implemented test cases using unit test and mock frameworks.
- Attended daily standup calls and scrum calls with clients.
- Involved in team meetings and giving demos to product owner and client.
- Integrated Azure services such as Blob Storage, SQL Database, Logic Apps, and Function Apps.
- Worked with cross functional teams.
- Integrated APIs with dashboards consumed by frontend teams.
- Documented the APIs and provided those to testing and Frontend team.
- Followed 2 weeks sprint and delivered the project.

PROJECT 2:

Project Title : **Tele Insights**
Client : **Babilon Mobile, Tajikistan**
Role : **Python Developer**
Technologies : **Python, Django, DRF, Rest API, MySQL, Docker, Bitbucket, Git, Azure**

PROJECT DESCRIPTION:

Tele insights is a customer service and usage insights platform developed for Babilon Mobile to help track customer subscriptions, complaints, and service requests. The system automates the processing of service request files uploaded by regional teams, applies validation/business rules, and generates reports for complaints, service outages, and customer plan usage summaries.

RESPONSIBILITIES:

- Developed Django REST APIs for customer complaints, service requests, and usage summaries.
- Used pandas to clean and transform input files containing customer complaints and subscription updates.

- Designed relational database schema in MySQL for storing complaint logs, service request histories, and usage insights.
- Implemented role-based access control using custom decorators.
- Implemented test cases using **unittest** and mock framework in a Test-Driven Development (TDD) in Agile methodology.
- Participated in daily Scrum calls, sprint planning, and sprint reviews in an Agile environment.

PROJECT 3:

Project Title : LMS
Role : Python Developer
Technologies : Python, Django, DRF, Rest API, PostgreSQL, Bitbucket, Git, Agile

PROJECT DESCRIPTION:

LMS is an internal Learning management system developed to streamline the employee training, upskilling and certifications. The system enables HR, managers to assign training modules, track employee progress and generate reports, show performance in dashboards.

RESPONSIBILITIES:

- Designed and developed REST APIs for course creation, employee enrolment, progress tracking and certification management.
- Designed relational database schema in PostgreSQL for employees, courses and certifications.
- Implemented JWT-based authentication with role-based access.
- Wrote unit test cases using unittest and mock frameworks to ensure code quality.
- Collaborated with the frontend team to integrate training modules and dashboards
- Worked in agile sprints, attending daily standups and give demos to stakeholders.

EDUCATIONAL DETAILS

- Bachelor of Engineering (B.Tech) from Sri Siddhartha institute of technology, Tumkur, Karnataka.

Declaration

I hereby declare that the above-mentioned details are true to the best of my knowledge and belief.
