Uma Mahathi N
ETL Developer
Mobile: +91-8977631072
Email: **umamahathi1072@gmail.com**

Summary of Expertise

- Having **8+** years of experience in implementing Data Warehousing applications using ETL tool.
- Expertise in ETL operations using Informatica Power Center 9.x / 10.x.
- Expertise in **ETL Administration operations using Informatica Power Center 9.x and IICS**.
- Manage Informatica server environments, including development, testing, and production.
- Manage for different activities like: Linux patching Activity, Battery replacement activity, by creating implementation plan, coordinating with all application teams, getting all required approvals, and carrying out the outage activity smoothly without any issue.
- Create and manage user accounts and roles within the Informatica environment.
- Support application and development team to deploy the codes to live environment.
- Manage user accounts and permissions in the Informatica environment.
- Perform routine system maintenance and checkups to ensure optimal performance.
- Troubleshoot and resolve any issues reported by users or detected in the system.
- Monitor daily ETL jobs and address any failures or performance issues.
- Co-ordinating with all the application teams, unix administrators to resolve the issues
- Monitor secure agents and Run Time environment in **Informatica power centre and IICS**.
- Provided **On-call support** to the Informatica platform to handle critical issues
- Create/Build **UNIX** shell scripts to pull data from vendors and dropped into Informatica environment using FTP process.
- Good experience in **UNIX** Commands and **UNIX** Shell Scripting.
- Developed mappings in Informatica Power Centre Designer to load data from staging environment to warehouse.
- Worked on Informatica client tools **Designer, Workflow Manager and Workflow Monitor.**
- Worked on Informatica Designer Components - Source Analyzer, Target Designer, Transformation Developer, Mapplets and Mapping Designer.
- Experience in developing Informatica **Mappings/Mapplets** to extract data from multiple sources, transform data, and then load into staging area and Data Warehouse.
- Worked **and extracted data from various database** sources: Oracle, Teradata
- Experience on Control-M, Autosys and Tivoli
- Worked with heterogeneous data sources **like Oracle, Teradata & Flat Files.**
- Good understanding of **Star Schema and Snow flake Schema.**

Area of Expertise

- ETL Tool: Informatica PowerCenter 9.x/10.x, IICS, Snowflake
- Database: Oracle
- Scheduling Tool: Autosys, Tivoli, Control-M
- Method: Agile
- CI/CD tools: Jenkins , Jira, Github
- Other : UNIX , UNIX Scripting

Professional Experience

Project 1

Client : Centene
Project Name : ODW 834
Role : Informatica Developer
Technology : Informatica 10.5.1, Snowflake, Oracle, Control M

Centene Corporation is an American for-profit healthcare company based in St. Louis, Missouri, which is an intermediary for government-sponsored and privately insured healthcare programs

Roles and Responsibilities:

- Working on Informatica enhancements
- Convert Informatica code to Snowflake code, create Snowflake scripts accordingly
- Seeing the , Prepare informatica mapping sheets as per informatica workflow
- Informatica mapping sheet is prepared/validated by analyst or team lead
- Develop Snowflake code as per the Informatica mapping sheet
- Developed the snowflake code to be tested and to be deployed to production.

Project 2

Client : International Airlines Group
Project Name : British Airways ETL and Corporate Reference tables (CRT)
Role : Informatica Developer/Administrator
Technology : Informatica 9.6.1, IICS, Oracle, Unix, Control M

International Airlines Group (IAG) is a major European airline conglomerate formed in January 2011 through the merger of British Airways and Iberia. IAG operates as one of the world's largest airline groups, owning several prominent carriers including Aer Lingus, Vueling, and LEVEL.

Roles and Responsibilities:

- Manage Informatica server environments, including development, testing, and production.
- Manage for different activities like: Linux patching Activity, Battery replacement activity, by creating implementation plan, coordinating with all application teams, getting all required approvals, and carrying out the outage activity smoothly without any issue.
- Monitor and manage server performance, ensuring high availability and reliability.
- Perform regular system health checks and maintenance tasks to ensure optimal performance.
- Co-ordinating with all the application teams, unix administrators to resolve the issues
- Create and manage user accounts and roles within the Informatica environment.
- Support application and development team to deploy the codes to live environment.
- Manage permissions and privileges for various users and groups.
- Administer the Informatica repositories, including backup, recovery, and maintenance.
- Monitor repository usage and performance, optimizing as necessary.
- Handle repository upgrades & migrations when needed for Informatica power centre and IICS
- Troubleshoot and resolve any issues or failures in ETL jobs.
- Implement and manage job scheduling tools and scripts.
- Checking the alerts and handling the issues related to alerts efficiently like long running job
- Analyse and optimize ETL workflows, mappings, and sessions for better performance.
- Implement best practices for performance tuning and load balancing.
- Monitor system performance metrics and address bottlenecks.
- Ensure quick recovery of systems in case of failures or disasters.
- Requirement gathering and develop, test, and implement ETL mappings, workflows, and sessions using Informatica PowerCenter
- Validate data according to business requirements and conduct testing
- Designing and developing new ETL mappings and workflows and performance tuning
- Conducting performance tuning to optimize ETL processes
- Collaborating with team members to resolve data quality issues,documenting new processes and updates to existing ones.

Project 3

Client : American Express
Project Name : FI Baselods
Role : Informatica Developer/Administrator

Technology : Informatica 9.6.1, Oracle, Unix, Rally

American Express is a multinational financial services corporation. The company is best known for its charge card, credit card, and traveler's cheque businesses. FI Baselods team mainly concentrates on transforming the transactional data loaded from different sources to specific portfolios of consumer and corporate based on business requirements where the end results would be fetching of strategical monthly/annual reports by Top management for business forecasts.

Roles and Responsibilities:

- Analysis on the requirements, prepare the test data accordingly and perform UT,SIT and UAT
- Prepare code comparison document for the parameter files and workflows between Dev, test and UAT regions
- Validation of data between source, staging and target
- Work on Test management tool Rally to follow up on user stories and to create defects
- Involvement in daily status calls with the client to provide updates.

Project 4

Client : Aviva Insurance Company
Project Name : Personal Data Layer (PDL)
Role : Informatica Developer
Technology : Informatica 10.x , Oracle, Unix,Tivoli,Jira,Jenkins

Aviva, leading insurance issuers in UK. The company offers quote and sells motor, home and life policies directly from its website and through select online agents. Aviva sells insurance to customers in different countries including UK and Canada. In Aviva Personal Data Layer acts as a source to the business applications.

Roles and Responsibilities:

- Requirement gathering; Development (Mapping, workflows, Sessions);
- Validation of data according to business requirement;
- Worked on all types of sources like relational DB,flat files etc;
- Unit Testing; Coordinated with team to fix bugs and in its root cause analysis;
- Handling Failures in Production during Warranty support

Project 5

Client : US BANK, Minneapolis
Project Name : Enterprise Landing Zone (ELZ)
Role : Informatica Developer and Informatica Support
Technology : Informatica 9.6.1, Oracle, Unix, Autosys

One of the critical applications for which U.S Bank's objective is to have a command center as Enterprise Landing Zone which ensures the availability of all the business-critical applications. ELZ is a solution to supply a wide variety of large data to the US Bank consumers based on their requirements.

Roles and Responsibilities:

- Requirement gathering; Development (Mapping, workflows, Sessions);
- Validation of data according to business requirements.
- Unit Testing: Coordinated with the team to fix bugs and in its root cause analysis.
- Handling Failures in Production during Warranty support
- Worked on ETL defects;
- Execution and monitoring of jobs from Autosys and also from wrapper scripts; L2 support;
- Preparing Relevant Documents like Release Tracker, Incident Tracker etc.
