Professional Summary

- 14+ of experience in Software Testing out of which around 5 Years of experience in Selenium web driver with Java and Python, Cider, Critique, Testtracker, Taskflow, Buganizer, Cucumber BDD, Gitlab and Jenkins.
- Proficiency in Selenium with Java, Python.
- Good Hands-on Experience in gLinux, Linux, API Testing, RestAssured, Python and Mobly PyTest.
- Good Knowledge in Agile (Scrum and Kanban), SDLC, STLC and BLC Concepts. Experience in Test Strategy, Test scenarios, Test case preparation and Execution.
- Bug Tracking and Reporting.
- 3 years of experience in Agile testing process. Experience in Functional testing, Integration testing, System testing and various testing techniques of both Windows and Web Applications. Basic knowledge on Performance Testing using JMeter. Good working experience in SQL, AWS and Linux.
- Written utilities for reusable of code

Core Competencies

Selenium with Java, Mobly-Python, Critique, Cider, Testtracker, Taskflow, AccelQ, Cucumber, RestAssured, Postman, Jenkins, Gitlab, Github, CI/CD, Maven, Java, GIT

Test Management, Defect Management, Selenium, Javascript

Education

B.Tech 2006 with 65%

Major Assignments:

Virtusa

Currently working with **Google** on behalf of Virtusa on Voice Assistant("ok Google") automation on multiple devices using the Mobly-Python **framework with pytest**.
The Devices include Android mobile, Android TV, Google Home speakers, Web Applications and Smart Displays.
Leading the team of 5 members working on different desktop and mobile web applications.

Capgemini
Project : 1
Pega Underwriting for Insurance (PUI) platform will provide an easy-to-use “Policy Hub” that includes: tools to enable decision making, workflow enhancements, segregation of submissions based on their complexity, simplified assignments, seamless integration between systems. Enable business to automate complex rules and send out automatic emails. The PUI will be integrated with Compass, Sharepoint, Outlook, Duckcreek(Wave), CLIPS, CLIPS-Quarter, Renewal DB(legacy), Address Validation DMTI. The UW Workbench Foundation project will focus on building some of the foundations required to drive the desired Genesis efficiency improvements, such as a single place for underwriters to pick up tasks, manage workload, and start transactions. These foundational components will be implemented for a subset of the NBFC underwriting community, namely NBI Small Business.

Capgemini
Project : 2
This soleil project is based on the merchant bonus 20% whoever customers enrolled for bonus and will be specific outlet merchant for enrolled customers only.
Bonus points should reflect in TS2, TLP and Moneris after the batch process

Capgemini
Project : 3
The main objective of Duo queue check project if Origenate ID, Name, Address and CPC are all same then it should go to Dup queue irrespective of old or new card else it should allow to create new card.
TSYS to modify the Duplicate Check functionality and create a new setting that will evaluate specific criteria as part of the check and match process to qualify/disqualify duplicate application entries.
Validated of TSYS Dup check for MC2/MC4 CPC from Partner Channel for Instant Ac-count Open.
Validated of TSYS Dup check for all the CPC from White Label Application Channel for Instant Account Open.

Capgemini
Project : 4
The purpose of this project is to build a capability to recognize and indicate the different rela-tionship/lifecycle stages that a profile might be within RBC Royal Bank (profiles within SRF). Understanding the status of a prospect/client’s relationship with RB and being able to react accordingly will directly support Acquisition and Client Interaction Optimization strate-gies/activities.
Create new capability to allow for prospect profiles with a reduced set of mandatory fields, and flexibility to enable additional minimal profile types in future
Add new Profile Lifecycle Status indicators and associated dates of status changes to the database
Create processes to automatically update the lifecycle status as profile transitions between stages

Achievement
Developed a script to utilize the staging url from mobile utilities for executing native app test cases.

Responsible for:

- Test scripts execution in MobileHarness and Local
- Managing team of Testers
- Building Test Plan and Providing Estimations
- Onshore/Offshore Team handling, Status Reporting to the client and onshore leadership team, Looking & resolving into the day-to-day activities/issues of resources and delivering the releases on time.
- Interacting with client delivery managers on regular basis
- Risk management – Identifying Risks, quantifying risks, setting up mitigation plans and responses in place.
- Responsible for creating Test standards, process, procedure, Best Practices and methodology across test areas.
- Responsible for review of test cases to ensure high quality deliverables
