Name: Mubarak S
Email: mubaraksheik1725@gmail.com
Mobile: +91-8310246714
Designation: Azure Data Engineer

Objective:

- ✓ Seeking challenging role to leverage experience and expertise in an organization.

Professional Summary:

- ✓ Having 5.2 years of experience in **Azure Data Engineering** including **Azure Data Factory, Azure Databricks, Azure SQL, Azure Data Lake Storage, Azure Synapse, Python, Fabric and Pyspark.**
- ✓ Proficiency in **Microsoft SQL** for complex data queries and database management.
- ✓ Expertise in **Azure Databricks and PySpark** for data engineering and ETL processes.
- ✓ Experience with **Azure Data Factory (ADF)** for orchestrating data workflows.
- ✓ Expertise in Azure Synapse Analytics for data integration and analytics.
- ✓ Strong experience in Azure Infrastructure Management and optimization.
- ✓ Experience in Azure Logic Apps, Function Apps, and CI/CD automation.
- ✓ Implement CI/CD pipelines for efficient code deployment and testing.
- ✓ Design and implement efficient data pipelines using Azure Databricks with PySpark to transform and process large datasets.
- ✓ Optimize data workflows for scalability, reliability, and performance.
- ✓ Experience with database performance evaluation and remediation
- ✓ Develop strategies for data acquisitions, archive recovery and implementation
- ✓ Experience in Data Governance including Microsoft Purview, Azure Data Catalogue, Azure Data Share, and other Azure tools.
- ✓ Strong communication skills to effectively convey complex data insights to non-technical stakeholders.
- ✓ Strong proficiency in data analysis, manipulation, and statistical modeling using tools like Spark, Python, Scala, SQL, or similar languages.
- ✓ Experience in Python & PySpark development
- ✓ Proficiency in designing and implementing APIs for data integration and access.
- ✓ Hands-on experience with ETL processes, data modeling, and data warehousing.
- ✓ Optimize data storage solutions using Azure services such as Azure Blob Storage, Azure Data Lake, and Azure SQL Database.
- ✓ Monitor and troubleshoot data pipelines and APIs to ensure high availability and performance.

Academic Qualifications:

- **B.E (Bachelor of Engineering)** from Anna University, 2018

Technical Skills:

Primary Skills :	Azure Data Factory, Fabrics, Databricks and SQL
Secondary Skills :	SQL, Oracle fusion, Excel. SQL Server. Azure SQL, Azure Data Lakes, Azure Storages, Siebel
Programming languages :	SQL, Python and Pyspark

Project Summary:

Project#1:

Client : Wells Fargo.
Duration : Dec 2023 to Apr 2025
Technologies : Azure SQL, Python, PySpark, ADF, ADB, Logic Apps and ETL.
Team Size : 15
Company : Nerdmine Pvt Ltd.

Description:

Northern Trust Corporation is a financial services company headquartered in Chicago, Illinois that caters to corporations, institutional investors, and ultra high net worth individuals. Northern Trust is one of the largest banking institutions in the United States and one of the oldest banks in continuous operation.

Contribution / Highlights –

- ✓ Building the pipeline to copy the data from source to destination in Azure Data Factory
- ✓ Worked on creating dependencies of activities in Azure Data factory.
- ✓ Creating stored Procedures and Scheduled them in Azure Environment
- ✓ Monitoring Produced and consumed Data Sets of ADF
- ✓ Successfully Creating the Linked Services on source and as well as destination servers
- ✓ Moving data from HIVE to Azure SQL DB with the help of pipeline and data flows
- ✓ Create automated workflows with the help of triggers.
- ✓ Pumping data between SQL DB and ADLS using Flows.
- ✓ Scheduled jobs in flows and ADF Pipelines using Triggers
- ✓ Performance tuning of SQL queries and stored procedures using SQL profiler and index Tuning Wizard
- ✓ Trouble shoot and kind of data issue or validation issues.
- ✓ Worked on Pushing data from SQL Server to HFM tool created DB, Table, Views, Joins and Source Point to Push data from one server to another server.
- ✓ Exploring data in a variety of ways and across multiple visualizations using Power BI

- ✓ Used Power BI Gateways to keep the dashboards and reports up to date. Published reports and dashboards using Power BI.

Project#2:

Client : Spark.
Duration : Sep 2022 to Nov 2023.
Technologies : Azure SQL, Python, Pyspark, ADF, ADB, Logic Apps and ETL.
Team Size : 12
Company : Stratosphere IT Services Pvt Ltd.

Description:

Spark New Zealand Limited, more commonly known as Spark, is a New Zealand telecommunications company providing fixed line telephone services, a mobile network, an internet service provider, and is a major ICT provider to NZ businesses.

Contribution / Highlights –

- ✓ Experience with Databricks, PySpark, and handling large volume of data
- ✓ Strong experience in data migration, ETL, and data integration processes.
- ✓ Proficient in Python, SQL, Pyspark and Scala (knowledge of Java is a plus).
- ✓ Knowledge of data warehousing and data lakes concepts.
- ✓ Familiarity with CI/CD processes for data workflows.
- ✓ Experience with Databricks-specific features such as Delta Lake and Databricks SQL
- ✓ Ability to communicate effectively with both technical and non-technical stakeholders.

Project 3:

Client : AB InBev
Duration : Jan 2020 to Aug 2022.
Designation : Systems Engineer
Company : Altech Star Solutions Pvt Ltd.
Skill Set : SQL, Data Bricks, Python, PySpark and ADF.

Description:
Anheuser-Busch InBev SA/NV, commonly known as AB InBev, is a multinational drink and brewing company based in Leuven, Belgium. AB InBev has a global functional management office in New York City, and regional headquarters in São Paulo, London, St. Louis, Mexico City, Bremen, Johannesburg and others

Contribution / Highlights –

- ✓ Experience in creating end to end pipelines for ADF and applying transformations as per business requirements
- ✓ Handled end to end Control-M to Airflow project
- ✓ Experience in creating multiple Pyspark/SparkSQL databricks notebooks for the pipelines from cleansed layer to Reporting layer
- ✓ Made DQ Framework which is employed to detect and eliminate error records by applying predefined custom business rules, and it generates statistics regarding the data quality
- ✓ Experience in creating DataModel by getting requirements from client using snowflake and star schema
- ✓ Integrate data from on-premises systems, cloud-based sources, and third-party APIs into the data ecosystem.
- ✓ Monitor data pipelines for reliability and performance, proactively addressing any issues
- ✓ Created Accelerator for migrating various platforms(informatica, SQL DB, Databricks) jobs into Airflow using automated templates and wrapper code
- ✓ DQ Framework: This framework is employed to detect and eliminate error records by applying predefined custom business rules, and it generates statistics regarding the data quality.
