PROFILE SUMMARY

Experienced Business Analyst with strong expertise in ERP implementations across Finance, Procurement, and Warehouse modules. Proven track record in requirement gathering, process mapping, and designing invoice processing workflows including tolerance checks and automated validations. Skilled in working with cross-functional teams to translate business needs into functional specifications. Led AS-IS and TO-BE process documentation using BPMN swimlanes, use case diagrams, and data flow diagrams to support development and UAT. Successfully implemented enhancements like plastic tax compliance, invoice-P.O. matching rules. Collaborated with Finance and Procurement stakeholders to define price/quantity mismatch tolerances. Hands-on experience in: Functional Requirement Documents (FRD) UI enhancements for warehouse operations Vendor onboarding and file mapping Documentation of user roles, unit settings, and interface-level expectations

WORK EXPERIENCE

May 2025 - Sep 2025 — Business Analyst Lead
Hexaware Technologies

Sep 2022 - May 2025 — Business Analyst Lead
Infosys Limited

- Collected and documented requirements for the Purchase Order (PO) processing flow, covering both manual entry via ERP and automated invoice submission from vendors through CSV files processed via Azure.
- Worked with stakeholders to map AS-IS and TO-BE processes for procurement and warehouse operations using process flowcharts and BPMN swimlanes.
- Supported implementation of UI enhancements for warehouse users to record damaged goods and update PO status tracking in real time.
- Acted as a liaison between Finance and Development teams to automate invoice matching, payment approval, and posting workflows.
- Defined business rules for tolerance checks on price/quantity variance, parked invoices, and flagged errors for finance validation.
- Prepared Change Requests (CRs) for enhancements including Plastic Tax logic for Spain, ensuring compliance

with government audit and tax regulations.
- Created Use Case Diagrams, Process Flowcharts, BPMN Swimlanes, Context Diagrams, and Data Flow Diagrams to communicate system behavior and interaction flows.
- Performed impact analysis for proposed system changes across cost, delivery timeline, cross-module dependencies, and reporting systems.
- Defined file extraction requirements from SACS for external teams, including data mapping specifications, scheduling, and secure FTP path validations.
- Maintained functional documentation covering unit settings, role-based access control, repository configurations, and interface-level mapping.
- Participated in vendor onboarding workshops to streamline invoice processing integration formats, validations, and system expectations across global regions.
- Collaborated with cross-functional teams to migrate standalone tools across Sales, Procurement, Warehouse, and Finance into a unified OneCore ERP platform, reducing manual reconciliation and improving process visibility.
- Mapped client business processes into Microsoft Dynamics 365 CRM workflows, enabling process automation and system consistency.
- Created Visio workflows, functional specification documents, and user training material for smooth change adoption across business teams.
- Partnered with technical teams to deliver CRM solutions, improving process decision-making speed by 30% via workflow automation and data integration.
- Led end-to-end business analysis for IATA NDC implementation (v21.3), enabling airline retailing across direct and indirect distribution channels.
- Gathered and translated business requirements into detailed Offer & Order Management API specifications covering AirShopping, OfferPrice, OrderCreate, OrderChange, and OrderCancel flows.
- Collaborated with Passenger Service System (PSS) teams including Amadeus, Sabre, and Navitaire to align NDC message structures with PNR, ticketing, and order reference data models.
- Defined API request and response schemas using IATA NDC XML standards, and coordinated their transformation into REST/JSON formats for compatibility with modern API gateways.
- Designed and documented AS-IS and TO-BE airline retailing process flows, encompassing flight offers, branded fares, fare bundles, seat selection, baggage pricing, ancillaries, and SSR/OSI service handling.

Feb 2022 - Jul 2022

Business Analyst

Apexon Technosoft

- Conducted core Scrum ceremonies including Sprint Planning, Daily Standups, Sprint Reviews, and Sprint Retrospectives to drive Agile delivery.
- Facilitated the Scrum process and ensured adherence to Agile principles, sprint goals, and definition of done (DoD).
- Identified and removed project impediments and delivery blockers, including technical issues, dependency delays, and resource constraints.
- Enabled continuous improvement by guiding the team on Agile best practices, process optimization, and sprint efficiency.
- Shielded the team from external distractions and scope interruptions to maintain focus on sprint commitments.
- Ensured transparent communication and consistent alignment across Developers, Product Owner, Scrum Master, and Stakeholders.
- Maintained project visibility through progress tracking and regular reporting to stakeholders.
- Participated in Program Increment (PI) Planning and

execution for cross-team alignment in a scaled Agile environment.
- Attended Scrum of Scrums to manage cross-team dependencies and ensure integration across multiple delivery teams.
- Generated and analyzed Agile performance reports such as Burndown Charts, Burn-up Charts, Velocity Reports, and Defect Metrics to track delivery health.
- Coordinated with offshore and onshore teams to align timelines, clarify requirements, resolve dependencies, and support global delivery.
- Encouraged collaboration, ownership, and team accountability to drive value-based delivery.

Oct 2014 - Aug 2016

Junior Software Testing Engineer

Cybertech Systems and Software Limited

- Worked in software application development involving in testing. Used SQL for query language. Write functional test cases and implemented it.

Projects

759 Days

Timatic

NDC Implementation Project (New Distribution Capability — IATA) Led end-to-end business analysis for IATA NDC implementation (v21.3) integrating airline retailing experience across direct and indirect sales channels. Gathered and translated business requirements into Offer & Order Management API specifications across AirShopping, OfferPrice,

OrderCreate, OrderChange, and OrderCancel flows. Worked with PSS (Amadeus/Sabre/Navitaire) teams to align NDC messages with PNR, ticketing, and order reference data structures. Defined API request/response schemas using NDC XML standards and coordinated conversion to REST/JSON for modern API gateway compatibility. Collaborated with Product Owners, Architects, and IATA compliance teams to support NDC Level 3 certification and interoperability testing. Developed AS-IS and TO-BE airline retailing process flows covering flight offers, branded fares, bundles, seat selection, baggage pricing, ancillaries, and SSR/OSI services.

973 Days

Bluegrass ERP System

I gathered business rules for tolerances from finance and procurement I interviewed stakeholders from the finance and procurement departments to understand their current approach to handling price and quantity mismatches. I asked specific questions like: What percentage of mismatch is acceptable? Do different vendors have different tolerances? I compiled their input into a tolerance matrix that became the foundation for business logic. I created functional requirement specs for validation logic Once I had the business rules defined, I translated them into functional requirements. For instance, I documented that if the invoice price is more than the PO price by a certain percentage, based on vendor data, the system should block the invoice. These specs were written in a detailed FRD that was reviewed by the ERP technical team. As part of designing the invoice tolerance process, I also worked on defining the roles and permissions.
