AKASH SIRSIKAR

akashsirsikar31.as@gmail.com +91-9739651213 linkedin.in/akash-sirsikar-617434192/

PROFESSIONAL SUMMARY

Seasoned **Data Professional** with over 5 years of successful experience in transforming data into actionable insights. Skilled in statistical analysis, machine learning, and advanced data manipulation. Searching for a strategic position to apply expertise in tackling intricate business issues through data-driven decision-making. Committed to staying abreast of industry trends and continually upgrading skills for optimal organizational impact.

SKILLS

Python | SQL | MySQL | PostgreSQL | MS Power Query | Azure Data Bricks | Preprocessing Techniques | Pyspark | PowerBI | Tableau | Azure Data Factory | Azure Data Bricks | Azure Key Vault | Azure functions| Logic Apps | Flask | Docker | Azure | Git/Stash | Jira | Agile | Altassian Confluence | Snowflake | Apache Airflow DAGs | pandas | numpy | FastAPI | GCP | BigQuery | ETL Pipelines | AWS | Hadoop | Apache spark | MilvusDB | Kubeflow | GKE

EXPERIENCE SUMMARY

GRAYRADIANT DATA SERVICES

- With 5 years of experience in **Azure Data Factory**, **Data Bricks**, Data warehousing using **MS-SQL Server Azure Data Lake Storage Gen2**, **Blob Storage**, **Azure SQL**, Azure Storage Explorer, **Azure Stream Analytics**, **SSIS** runtime integration with ADF, **PySpark**
- Hands-on experience with Azure Synapse Analytics, **Azure Security & Identity**, Key Vaults. Experience developing **Azure Data Factory** (covering Azure Functions, **LogicApps**, **Triggers**, **IR**) , Databricks (PySpark), Stream Analytics.
- Experienced in Azure ADF data migration projects. Implemented ingestion pipelines in Azure Data Factory to extract data from diverse sources, ensuring seamless orchestration of end-to-end data Apache workflows.
- Utilized Azure Databricks with PySpark for intricate data transformations and seamlessly integrated Databricks notebooks with Azure Data Factory pipelines for **streamlined processing**.
- Implemented **Control flow activities** and **pipeline activities** for on-cloud ETL processing.
- Experience in creating data pipelines to load from one server to another using **Azure Data Factory**. Also, experience in creating incremental load pipelines using AzureDF
- Leveraged notebooks in Databricks to perform complex data transformations using Spark, contributing to streamlined data processing and analysis workflows.
- Building web applications interface using **Python, Flask**, and **Django** for data handling
- Proficient in maintaining various version control systems such as **Git**, **Jira** , **VSCode.**
- Strong grasp and practical experience of object-oriented programming (**OOP**) concepts and system design using Python, C# , R Programming.
- Familiarity with various IDEs such as **PyCharm** , **Visual Studio Code** , jupyter, etc
- Good understanding of **System Design pattern** and **RESTful** architecture, inculcating knowledge in pipeline design like factory method, singleton pattern.

PROFESSIONAL EXPERIENCE

Senior Data Engineer

"*Customer-Centric Operations Outlier Detection*" Project **Jan 2025 - Present**

- Designed and deployed CCO outlier detection for fiber optics telemetry, improving SLA compliance by 23%, orchestrated this pipeline in **kubeflow** (in **GKE**)
- Engineered scalable **data ingestion workflows** for CCO analytics, integrating multi-source customer and **network KPIs**.
- Implemented anomaly detection models using FEC based on **BER metrics**/signal loss anomalies computation metrics, enabling proactive resolution of more than 80% of network degradation issues, faced by BSP
- Built **end-to-end pipeline** in **GCP** using BQ tables for source, as sensor device data is hosted directly in BQ table, and later outlier report/summary loaded in **BigQuery** table.

Client : Mu Sigma **Jan 2024 - Dec 2024**

"*Risk Modeling Data Pipeline Development*" Project

- Developed scalable and efficient **ETL pipelines** using **pyspark** for ingesting, transforming, and processing large datasets from multiple sources.
- Designed and implemented data storage solutions using modern **data lake** and data **warehouse** technologies.
- **Automated workflows** and data pipelines using **orchestration** tools (**ADF**) to ensure reliable and timely data delivery.
- Optimized pipeline **performance** and enabled seamless integration with downstream
- Secured sensitive financial data using **Azure Key Vault** and enforced role-based access control (**RBAC**)

Data Engineer

Sep 2022 - Dec 2023

Client : HDFC

"Bank Statement Analyzer" Project

- Designed **ETL data pipelines** for replacing client **ETL** into specific standard framework
- Ensure **data quality** by implementing **data validation**, cleaning, and transformation.
- **Optimized** performance by improving ETL processes, ensuring **fast data processing**
- Collaborated with **stakeholders** to understand **business requirements**
- Ensure **compliance** with **security** and **regulatory standards.**

"MNBA" Project

- Collaborate with **financial analyst** in gathering requirements and translating them to technical specifications and performed **feature engineering** with **EDA** analyses
- Build **ML-XGBoost Model** for ranking probable customers, based on client **transaction data** and **digital footprint** triggers as features via predictive advanced analytics
- Determining the next most probable customers for **targeted banking** for marketing products like home loans, business loans, gold loans, car loans, etc
- Orchestrated workflow automation and task scheduling through **Apache Airflow**
- Optimized **ETL** processes and data workflows to improve model **performance** from 2-3% **to >5%** and optimized server usage time

Client : ICICI **Jan 2022 - Aug 2022**

"Customer Needs for Habitual AI customer engagement" project

- Collaborated with **business analyst** in gathering requirements and translating to technical specifications and performed **feature engineering** with **EDA** analysis
- **Predicting LifeStage** of customer for targeted banking and improving habitual banking through enhanced customer engagement by customer **transaction data** analysis
- Conducted **advanced analytics** and **customer segmentation** using Python and SQL to drive targeted marketing and personalized promotions.

Client : HDFC, ICICI, IndusInd **Apr 2021 - Dec 2021**

"Card Tokenization for secure banking" project

- Monitored **ETL pipeline** runs, handled failures, and resolved performance issues to ensure reliable data processing and ensuring seamless data flow and integration using **flask** framework
- Enhanced **tokenization dictionary** and composed storage standards for normalized and efficient performance and robustness of built model.

UNOCOIN Technologies Private Limited **Dec2017-Sep2018**
Financial Customer Success Associate **Bangalore**

EDUCATION

M.Tech **2015-2017**
Structural Engineering **Bangalore**
University Visvesvaraya College Of Engineering(UVCE)

B.E **2010-2014**
Civil Engineering **Bangalore**
Acharya Institute Of Technology
