

Resume

Bhaskar Reddy G **Email- bhaskarreddyg369@gmail.com**
AWS cloud engineer **Mobile**: **+91-9164654337**

PROFESSIONAL SUMMARY:

- **8+ Years** of substantial IT experience with relevance 5 yrs into AWS cloud Engineer
- Expertise knowledge in **Amazon Web Services, Terraform, Lambda** for automating operations
- Hands-on experience working with AWS services like **EC2, VPC, RDS, ELB, S3, SES,SNS Cloud watch, EBS**, **Route 53**, Identity & Access Management (**IAM**), **Cloud Trail,** complete understanding of security groups, routing tables.
- Creating the aws services using **Terraform** infrastructure as code for provisioning, Launching VPC, Subnets EC2, NAT Instances, Security Groups, NACL's, Route tables, Internet Gateways, Auto-Scaling, Load Balancers (ELBs) in the defined virtual private connection.
- Handling multiple requests in **IAM** like creating **users**, **MFA**, **groups**, and **roles**.
- Creating/Modifying **Policies** according to user's access requirement.
- Working with **S3** to create the buckets to store objects.
- Hands on experience in setting up **Multi-AZ RDS** instances for High Availability.
- Assigning roles to **EC2 instances** and **Lambda functions** to access/store data from other AWS services like S3,
- Monitor and configure all running EC2 instances through **Cloud Watch.**
- Using **Route 53** service for domains/sub domains management.
- AWS **EBS volume backups** and AWS **RDS snapshots**.
- Created **NAT** gateways and instances to allow communication from the private instances.
- Worked on **Cost optimization** for services like EBS , EC2,S3, elastic ip.
- Strong background in Branching, Merging, and maintaining the version across the environments using SCM tools GIT Hub
- Worked on code pipeline for continuous integration and for End-to-End automation for build and deployments.
- Excellent understanding of SDLC methodologies like Agile

Professional Experience:

- Working as an AWS & DevOps Engineer in **Wipro Technologies** from Sept 2021 to till date.
- Worked as an cloud platform engineer in **DXC Technology** from may 2018 to march 2021
- Worked as process associate in **Accenture solutions pvt ltd** from June 2016 to Nov 2017

Educational Qualification:

- Master of Business Administration (MBA) from JNTU University, Anantapur
- Bachelor of Computer applications (BCA)from Sri Venkateshwara University, Tirupathi

Area of Exposure:

Operating Systems	Linux & Windows
SCM Tools	GIT hub, Aws code commit
CI Tools	Aws Code pipeline, Jenkins
IAC Tools	Terraform, cloud formation
Monitoring Tools	Cloud watch, Grafana, Prometheus
Project/Bug Tracking Tools	Jira, Confluence
Ticketing Tool	Service now, Tufin
Cloud Platforms	AWS cloud platform
AWS Services	EC2, ELB, VPC, RDS, IAM, S3, Cloud Watch, ECS, ECR Cloud Trial, SNS, SES, EBS, route53, Lambda functions

AWS Cloud Admin
Wipro Limited
Current Project- RWE Energy

- we received tickets from service now to delete the load balancers
- Request to delete SNS subscriptions
- Request to replace the statement of inline policy in role
- Request to delete S3 bucket and remove the start/stop scheduler from the instances
- Request to modify the IAM roles from the application team
- To delete the could watch alerts received from user
- Request to add the additional ports to SG
- Request to update the Cname records
- Taking the AMIs for the requested servers
- Create listener for the application load balancer and network load balancers
- Request to remove the servers from the target groups
- In multi accounts using the service catalog provisioning the accounts
- Decommissioning the accounts requested form the application team
- Update the tags using the lambda functions
- Update the python version from 3.8 to 3.11 using the Aws code pipeline
- Providing the access to the users using azure pipeline creating the .sso files
- Taking the backup of the code commit repos to azure repos using azure devops pipelines
- Daily check reports sending to the stake holders using AWS compute optimizer, Aws trusted advisor.

Project#2
Project Name: PLIM
Client: Lululemon athletic Canada

RESPONSIBILITIES:

- Setup and build AWS infrastructure various resources, VPC, EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS in Implemented local user provisioning instances created in AWS cloud.
- Created the **VPC's**, configured the subnets, attached the gateway and routing tables to the subnets and deployed the EC2 instances in the subnets created.
- Provisioning the window machines and maintaining those servers for high availability
- Configured and written python scripts to automate the backup and snapshot of EC2instances and storing those snapshots on S3 buckets.
- Creating the S3 buckets and maintaining the data remotely
- Creating the Read Replicas for the RDS databases in the different regions
- Implemented the cloud watch alarm (High Status Check Failed System) in EC2 instance.
- Configured the ELBS and auto scaling groups for high availability
- **S3** concepts like creating of buckets, events, versioning, life cycle management
- Configure the alarms and notifications for the instance state

Project#3:

Client Name : Mapfre Insurance

ROLES AND RESPONSIBILITIES:

- Creating the aws services using **Terraform** infrastructure as code for provisioning, Launching VPC, Subnets EC2, NAT Instances, Security Groups, NACL's, Route tables,Internet Gateways, Auto-Scaling, Load Balancers (ELBs) in the defined virtual private connection
- Setting up continuous integration CICD using aws code pipeline integrating with build and test and deployments
- Managing the windows operating system and severs deploying the packages to respective directory's
- Co-ordinated and assisted developers with establishing and applying appropriate branching, labeling/naming conventions using source control.
- Its easy to store the artifacts we used aws web services **ECR** (Elastic container Registry)
- To deploy the artifacts, we used orchestration tool **ECS** (Elastic container services)
- Setting up the clusters and creating the task definitions and assigning those task definitions to the services
- Experience in S3 versioning and lifecycle policies to take backup files and move files to Glacier
- Handling multiple requests like IAM users, groups and roles
