## SUMMARY

I am a dedicated in Azure Data Engineer with hands-on experience of 4+ years in requirement analysis, testing, and software development, with strong expertise in Microsoft Azure (ADF, Databricks, Synapse, SQL, and Key Vault, Fabric) and Apache Spark (Core, SQL, Streaming). I have hands-on experience in performance optimization for Hadoop and Spark workloads, as well as solid knowledge of Big Data technologies like Hive and Impala, working with file formats such as ORC, Parquet, and Avro.

## TECHNICAL SKILLS

**Cloud Platforms:** Databricks, Azure, Impala Cloud Era, Azure Fabric

**Databases:** SQL, Hadoop, Hive/impala, SSMS

**Programming Languages:** SQL, Python, Spark SQL

**Tools:** ServiceNow, Rapid Miner, Power BI

**Monitoring & Orchestration:** Databricks Jobs, Rapid miner AI Hub jobs

**Other Skills**: Azure Data Factory, Azure Synapse Analytics, Delta Lake, Production Support, On call activities.

## WORK EXPERIENCE (Wipro)

**Project 1:**

**Project Name: Fleetwide Telematics Client: Laing O Rourke**
**Environment:** Azure Storage, Azure SQL, Azure Data Bricks, Azure Data Factory, Azure Data-Lake
**Role** : Azure Data Engineer
**Duration** : Mar 2025 - Present

**Project Description**: Fleetwide Telematics is a strategic data integration and analytics initiative for Laing O'Rourke, built on Azure's Lakehouse architecture. The project replaces legacy real-time data patterns with scalable micro-batch ingestion and standardized data flows. It integrates telemetry data from multiple sources (Track unit, Safety Shield, Liebherr Crawler Cranes) and supports API-based data sharing with Salesforce and GIP. The solution is designed to enable future migration of crane products and unify data access across platforms.

**Responsibility:**

- Designed and developed scalable data pipelines using **Azure Data Factory**, **Azure Databricks**, and **Delta Lake** for micro-batch ingestion.
- Integrated external telemetry data sources with 15-minute batch intervals, ensuring reliability and performance.
- Built and maintained APIs using **Azure Functions** and **API Management** for seamless data exchange with **Salesforce** and **GIP**.
- Ensured compliance with enterprise integration standards and contributed to high-level data flow architecture.
- Supported migration planning for legacy crane solutions to the ADLS.
- Architected and deployed microservices using Azure Service Fabric to manage real-time telemetry ingestion across diverse fleetwide assets.
- Leveraged Service Fabric clusters for scalable, fault-tolerant service orchestration, ensuring high availability and seamless data flow.
- Implemented data governance and security using **Azure Purview** and **RBAC**.

---

**Project 2:**

**Project Name: Asset Metrics Hub (AMH) Client : Saudi Industries Ltd.**
**Environment:** Azure Storage, Azure SQL, Azure Data Bricks, Azure Data Factory, Big Data Hive, MS-SQL Server
**Role** : Data Engineer
**Duration** : Nov 2023 to Feb 2025

---

**Project Description**: Saudi Basic Industries Corporation, known as SABIC, is a Saudi chemical manufacturing company. Sabic's Manufacturing Data Mapping and Asset Framework is an initiative of corporate digitalization program (CDP) flagged off with the aim of addressing manufacturing data restructuring and seamless integration of assets data, information and KPIs for such requirements. This unified Asset Framework platform will serve the basis for all the manufacturing assets within SABIC global operating facilities/Affiliates

**Responsibility:**

- Ingesting source data from various relational and non-relational data sources into Azure Data Lake and Azure Synapse through ADF pipelines.
- Developing data integration pipelines using Azure Data Factory, Azure Key Vault, Azure Data Lake, Azure SQL database, Azure Virtual Machines, Azure Monitor, Log Analytics, and Application Insights.
- Scheduled the ADF Pipeline with Event based and Scheduled triggers.
- Building a solution architecture for a data engineering solution using Azure Data Engineering technologies such as Azure Data Factory (ADF), Azure Data Lake Gen2, Azure Blob Storage & Azure Synapse Dedicated SQL Pool.
- Creating the Ingestion pipelines using ADF (Azure Data Factory) based on the Source requirements Implemented Rest Api's.
- Developed the logic in Hive/Impala to integrate the same KPIs to Big Data (Hive & Impala).
- Developed stored procedure with exceptional handling mechanisms.

---

**Project 3:**

**Project Name: Asset Health Care (AHC) Client : Saudi Industries Ltd.**
**Environment:** Hadoop, HDFS, Big Data Hive/Impala, MS-SQL Server, Rapid Miner
**Role** : Data Engineer
**Duration** : Oct 2021 to Oct 2023

**Project Description**: Saudi Basic Industries Corporation, known as SABIC, is a Saudi chemical manufacturing company. Asset Healthcare, a digital program to complement existing manufacturing efforts toward improving asset reliability in over 100 Plants globally.

**Responsibility:**

- Developed a pipeline in Rapid Miner tool from retrieving live data from OSI PI to apply ETL checks.
- Hands on experience with SQL table creations, modifications, deletions & creation of Stored Procedures on database.
- Handled data migrations to different servers as per client requirement, maintaining of data pipelines
  and making necessary cleanups of redundant data.
- Worked on Optimization of Queries for retrieving data that affects performance.
- Developed the logic in Hive/Impala to integrate the same KPIs to Big Data (Hive & Impala).
- Worked on Optimization of SQL Queries by indexing.
- Developed stored procedure with exceptional handling mechanisms.
- Developed Merged Queries as part of automation in Impala (Big Data)

## EDUCATION

**Saveetha School of Engineering, Chennai**

Aug 2017 - May 2021 | B.E in Electronics and Communication Engineering ***CGPA:8.67/10***

**Narayana Junior College, Ananthapur**

June 2015 – Apr 2017 | M.P.C **CGPA:9.3/10**

## AWARDS & CERTIFICATIONS

- SQL | RapidMiner Data Engineering | Cloud-Microsoft Azure (L1) | Azure DP-900
- Promoted to **Senior Data Engineer** at Wipro in recognition of consistent performance, technical expertise, and significant contributions to data engineering projects.
- Received Client Appreciation for doing RapidMiner Pipeline Optimization.
- Received Appreciation from manager as well as Client for doing Queue Optimization for scheduling the Pipelines.
- Received Appreciation from manager for creating Hana report from sap tables.
