Padmavathi G

Phone: 8884795882 | Email: padmasgraj7@gmail.com

Location: Bangalore, Karnataka

Professional Summary :

- Aspiring software engineer with 5+ years of experience in IT field with relevant experience of **AWS Data Engineer** with 4+ years of experience designing and implementing scalable data solutions on the AWS platform. Skilled in AWS services such as **S3**, **Redshift**, **Lambda, Athena** and **Glue**, along with expertise in **Data modelling, Data Reporting** and **ETL** processes with a focus on resolving inefficiencies and delivering actionable business insights.

Work Experience:

Role: AWS Data Engineer(Senior Consultant)
Organization: Accenture Services Pvt Ltd., Bengaluru, India
Project : Merck Pharma
Duration: Aug 2020 – Present

Description: Our project focuses on providing comprehensive analysis to our client by integrating data from multiple sources, including local lab data, central lab data, and inform data. This consolidated information will be used to build and maintain scalable data pipelines that allow seamless access to structured and unstructured data for analysis generate detailed patient reports and support in-depth analysis, ensuring valuable insights for decision-making.

Technical skills: Pyspark, SQL, Python
Services: AWS Glue,S3,AWS Athena, AWS Redshift, ETL Pipeline, IAM, Data Warehouse services,AWS Lambda.

Key responsibilities:

- Designed, developed, and deployed ETL solutions leveraging AWS Glue to extract, transform, and load data from various sources into data lakes and data warehouses, ensuring seamless data flow and efficient processing.
- Proficient in AWS services, including AWS Glue, AWS Lambda, Athena, Amazon S3, IAM, RDS, etc., to build scalable and high-performance data solutions.
- Utilized AWS Glue for ETL development, including the creation of Glue Jobs, Crawlers, and Data Catalog, to automate and streamline data extraction, transformation, and loading processes.
- Optimized Spark job performance to efficiently process large incremental tables (2 TB/day) by fine-tuning resource allocation and addressing small file issues, resulting in 6x increase in performance.
- Created and managed SQL-based reporting and analytical solutions, enabling efficient data querying and insights generation.
- Conducted in-depth troubleshooting to identify and resolve data pipeline issues promptly, minimizing downtime and ensuring reliable data delivery.
- Analyzed source data for data quality issues, implementing corrective measures in ETL processes using PySpark to ensure data consistency and accuracy.
- Collaborated effectively with cross-functional teams, providing guidance and support throughout the data engineering lifecycle, from requirements gathering to deployment and maintenance.
- Leveraged Spark and SparkSQL to transform data into enrichment layers, applying Spark

optimization techniques to enhance resource utilization by 30% and cut runtime for long-running processes by 50%.

TECHNICAL SKILLS:

- **Programming :** Python, PySpark, SQL
- **AWS Services:** AWS Glue, AWS S3,AWS Athena,AWS Lambda,AWS Redshift, AWS DMS,AWS RDS.
- **Databases :**MySQL
- **Big Data Framework :** Spark
- **Tools/SDK/Technologies:** SQL Oracle Developer, Cognos BI, Inform, GitHub, Subversion, Jira, Agile Methodologies, DBT
- **Other Skills:** Data Modeling, Data Quality, Data Transformation, Reporting, Data Integration,

ACADEMIC DETAILS:

Bachelors in Computer Application in Vijaya college, Jayanagar under Bangalore University with 80.02% in 2019

ACHIEVEMENTS:

- Recognized as a Core Value Champion and recipient of the award in 2023, acknowledging dedication and embodiment of organizational values.
- Received Client Appreciation for exemplary problem-solving abilities and effective communication skills, fostering positive client relationships.

PROJECTS:

Covid-19 Data Analysis on AWS | Python, AWS Glue, Athena, RedShift, S3

- Built a data pipeline to extract and transform COVID-19 Data Lake on AWS using Python and various AWS tools, loading the processed data into the Redshift data warehouse. Used Glue crawlers to extract schema for the pipeline.
- Used Redshift connector to create tables in the Redshift data warehouse and developed visualizations in Power BI.

DECLARATION:

I hereby declare that all the information provided above is true to the best of my knowledge and belief.
