ABHISHEK CHAVAN

+91 - 7798516054 abhichavan857@gmail.com

To obtain challenging **Big Data Engineering** to leverage extensive experience in Large-Scale Data Architecture, Pipeline Optimization, and Credit Analytics Automation to contribute to innovative data-driven decision-making processes.

CORE COMPETENCIES

- Data Architecture & Pipeline Development
- Data Engineering for Credit Analytics
- Hadoop Ecosystem
- Data Governance & Compliance
- SQL & NoSQL Data Management

TECHNICAL SKILLS

- **Big Data Technologies:** PySpark, Hadoop, Hive
- **Programming Languages:** Python, Shell Scripting, SQL
- **Cloud Platforms & Services:** MicrosoftAzure,ADLS Gen2,ADF,Databricks,Synapse.AWS lambda,S3,Athena,Glue
- **Version Control:** Github,BitBucket

EDUCATION

2019: MCA - Computers

Vivekanand Education Society's Institute of Technology, Mumbai

2016: BCA - Computers

Smt Kasturbai Walchand College of Arts and Science, Sangli

SOFT SKILLS

Leadership | Communication | Team Collaboration | Critical Thinking | Time Management | Problem–Solving

PERSONAL DETAILS

Languages Known: English, Hindi & Marathi
Address: Pune, India

PROFILE SUMMARY

- Results-driven Big Data Engineer with **over 4 years** of experience designing, developing, and optimizing scalable data processing pipelines and analytical solutions within the financial services and stock exchange domains.
- **Expertise in leveraging PySpark, Hadoop, Hive** to enhance data reliability, reduce runtimes, and automate critical workflow such as credit rating and risk analytics.
- Recognized for **driving performance improvements** and ensuring data governance compliance..

AWARDS & ACCOLADE

- Received multiple awards at TransUnion CIBIL, including Wow Awards (Apr 2022, Oct 2022, Jul 2025) and Spot Award (Oct 2022) for driving Spark job optimizations, CMR & CV-CMR Data pipelines

WORK EXPERIENCE

October 2021 – Present | Data Engineer
TransUnion CIBIL Limited

Project Overview:
Led development for the CIBIL Commercial Report, a comprehensive credit history record utilized by lending institutions across India to evaluate the creditworthiness of commercial borrowers.

Key Contributions:

- Designing and implementing Spark-based applications to automate the extraction, transformation, and loading (ETL) of credit data from member banks into Hive tables, streamlining credit rating processes.

Highlights:

- Implemented scalable data pipelines for borrower data using **Python** (**PySpark)**, **Hadoop**, and **Hive, SQL** to process, clean and transform, and store large volumes of financial data efficiently.
- Implemented data quality checks and error logging in Python for better pipeline reliability.
- Optimized ETL pipelines by migrating from Pig to PySpark cutting processing time from 13 hours to 3.5 hours, enabling faster analytics and reporting for borrower datasets.
- Established and enforced robust data governance frameworks and monitoring mechanisms to ensure data quality, integrity, and compliance with regulatory standards.
- Created Hive external tables over partitioned HDFS directories for efficient querying and downstream analytics
- Automated daily ETL jobs using Shell scripts ensuring reliable and timely data delivery.
- Optimized PySpark transformations (using broadcast joins, partitioning, caching) to improve pipeline performance and reduce execution time.

July 2019 – September 2021 | Associate System Analyst
National Stock Exchange Information Technology

Project Overview:
Supported the Electronic NSE Interface for Trading Members (ENIT), a fully digital communication platform enabling seamless information exchange between trading members and the Exchange.

Key Contributions:

- Diagnosed and resolved escalated application issues within stipulated SLA timelines, ensured uninterrupted user experience.
- Participated actively in Disaster Recovery (DR) drills, strengthened organizational resilience and business continuity preparedness.
- Managed and coordinated application, database, and server upgrade activities in collaboration with Development and It Operations Teams.

- Developed and implemented shell scripts that reduced manual operational tasks by 30%, improved team efficiency.
- Conducted comprehensive root cause analysis for software defects, drove timely resolution and prevented recurrence.
- Delivered training sessions to onboard and upskill new technical support staff, enhanced team capability and knowledge transfer.
